MISSION

To provide timely and reliable national statistical information on the labour market to facilitate informed decision-making within the government and community-at-large

Statistical activities conducted by the Manpower Research and Statistics Department (MRSD) are governed by the provisions of the Statistics Act 1973 (2020 Revised Edition). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department.

Statistics compiled and disseminated by the MRSD adhere to international standards on official statistics set by the International Labour Organisation and International Monetary Fund.

As part of MRSD's continued commitment to deliver accurate and relevant statistics on the labour market, our data collection processes have undergone an assessment by Ernst and Young Advisory Pte. Ltd.

For insights on the labour market, visit us at stats.mom.gov.sg

Revisions

Seasonal patterns make it difficult to tell if a quarter-to-quarter change is a true reflection of the underlying trend or merely due to seasonal influences. To remove the seasonal influences, a statistical technique called seasonal adjustment is used to produce seasonally adjusted data. These seasonally adjusted data can then be compared between different periods of the year. Revision on seasonally adjusted data is done once a year, taking into account data for the latest year. The results of the latest annual revision may be found in this report.

Labour Market

Report Fourth Quarter

2025

Unemployment

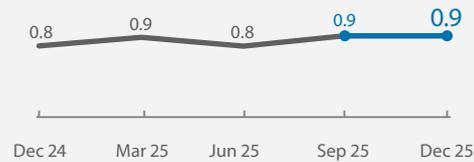

Unemployment rates in December 2025 were similar to September 2025.

Unemployment rate (%), seasonally adjusted

The resident long-term unemployment remained stable at 0.9% in December 2025.

Resident long-term unemployment rate (%), seasonally adjusted

Short Work-Week Or Temporary Layoff

The number of employees placed on short work-week or temporary layoffs increased in 4Q 2025.

800
3Q 2025

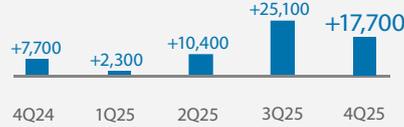

↑

960
4Q 2025

Employment

Total employment expanded by 17,700 in 4Q 2025, a slight decline from the 25,100 in 3Q 2025.

Employment change (excluded MDW)

Employment level (excluded MDW)

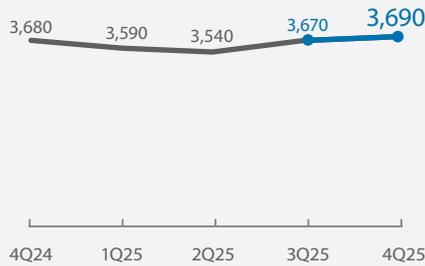

3,800,100
Dec 2025

Employment data excludes migrant domestic workers (MDW)

Retrenchment

The number of retrenchments remained low in 4Q 2025.

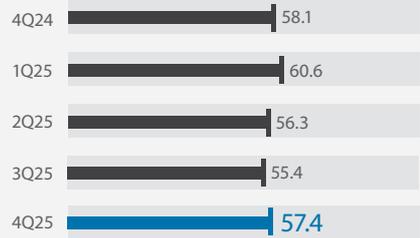

Retrenched employees

Re-entry into Employment

The resident rate of re-entry into employment within 6 months post-retrenchment increased slightly in 4Q 2025.

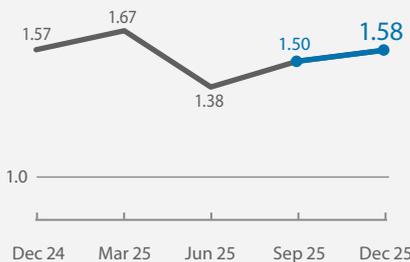

Resident rate of re-entry into employment (6 months post-retrenchment) (%)

Job Vacancy

There remained more job vacancies compared to job seekers in December 2025.

Ratio of job vacancies to unemployed persons, seasonally adjusted

Recruitment and Resignation Rates

Both recruitment and resignation rates increased in 4Q 2025 compared to the previous quarter.

Average monthly recruitment and resignation rates (%), seasonally adjusted

Labour Market Report Fourth Quarter 2025

Executive Summary

- The labour market recorded positive outcomes in 2025, supported by economic growth. ¹ Total employment rose² by 17,700 in 4Q 2025, marking the 17th consecutive quarter of growth. While the growth in 4Q 2025 was lower than the stronger-than-expected growth in 3Q 2025 (25,100), it remained higher than employment growth in the first half of 2025. Growth in resident employment was observed in *Professional Services*, *Financial Services* and *Health & Social Services*, while non-resident employment growth remained driven by *Construction* and *Manufacturing*.
- For the full year of 2025, employment increased by 55,500 (11,600 residents³ and 43,900 non-residents), up from 44,500 (8,800 residents and 35,700 non-residents) in 2024. Non-resident employment growth was driven largely by Work Permit Holders in *Construction*.
- Unemployment rates remained low and stable in December 2025 (overall: 2.0%; resident: 2.9%; citizen: 3.0%). The resident long-term unemployment rate has also held steady at 0.9% in December 2025.
- Retrenchments (3,690, or 1.5 retrenched per 1,000 employees in 4Q 2025) remained low and within non-recessionary norms.⁴
- Labour demand remained firm. Job vacancies increased from 69,600 in September 2025 to 77,700 in December 2025, reversing the dip from June 2025 (76,200). The overall job vacancy to unemployed persons ratio increased from 1.50 in September 2025 to 1.58 in December 2025, indicating that job vacancies continued to exceed the number of unemployed persons.
- In 1Q 2026, firms are expected to remain cautious in their hiring and wage decisions. The proportion of firms expecting to hire declined slightly to 43.3%, with expectations generally lower across most sectors. While wage expectations rose to 26.4% on a broad-based basis, they remained below levels seen in the past two years. Retrenchments are expected to edge up in some outward-oriented sectors but remain within non-recessionary levels.

¹ According to the Ministry of Trade and Industry's Economic Survey of Singapore 2025, the Singapore economy grew by 6.9% year-on-year in 4Q 2025 and 5.0% for the full year of 2025. GDP growth for the year was driven by the *manufacturing*, *wholesale trade* and *financial & insurance* sectors.

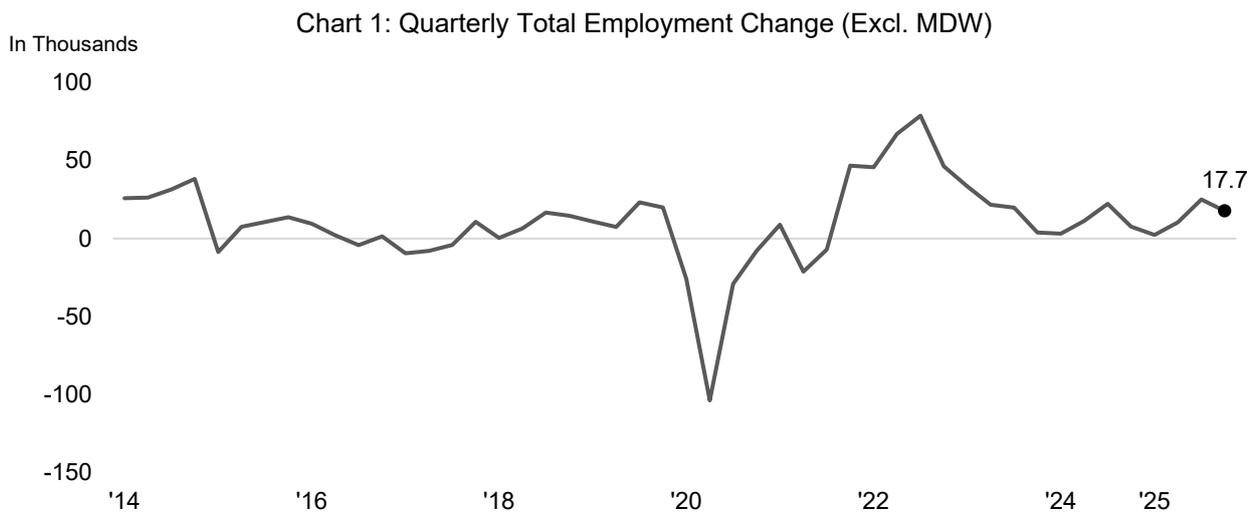

² Employment data in this report excludes migrant domestic workers (MDW). They are rounded to hundreds and may not sum in some instances due to rounding.

³ Refers to Singaporeans and Permanent Residents (PRs).

⁴ The incidence of retrenchment remains within the non-recessionary ten-year quarterly average (1.5 retrenched per 1,000 employees).

Employment

Total employment expanded by 17,700 in 4Q 2025, comprising an increase of 3,100 residents and 14,600 non-residents. This marks the 17th consecutive quarter of expansion since 4Q 2021. While the growth in 4Q 2025 (17,700) was lower than the stronger-than-expected growth in 3Q 2025 (25,100), it remained higher than employment growth in the first half of 2025 (1Q 2025: 2,300; 2Q 2025: 10,400).

Source: Administrative Records and Labour Force Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Employment change is the difference in the employment level at the end of the reference period compared with the end of the preceding period.
- (3) 'Excl. MDW' refers to excluding migrant domestic workers.

In 4Q 2025, both resident and non-resident employment grew in *Administrative & Support Services*⁵ and *Retail Trade* due to seasonal hiring for events and the holiday season. Growth in resident employment was also observed in *Professional Services*, *Financial Services* and *Health & Social Services*, while non-resident employment growth remained driven by *Construction* and *Manufacturing*.

For the full year, employment growth in 2025 (total: 55,500; resident: 11,600; non-resident: 43,900) was higher than in 2024 (total: 44,500; resident: 8,800; non-resident: 35,700). In the longer term, resident employment is expected to moderate, given Singapore's already high resident labour force participation rate.⁶

⁵ The employment growth was mainly in employment activities related to outsourced and temporary workers.

⁶ Labour force participation rate of residents aged 25 to 64 is 85.9% in 2025. Source: Comprehensive Labour Force Survey, Manpower Research & Statistics Department, MOM.

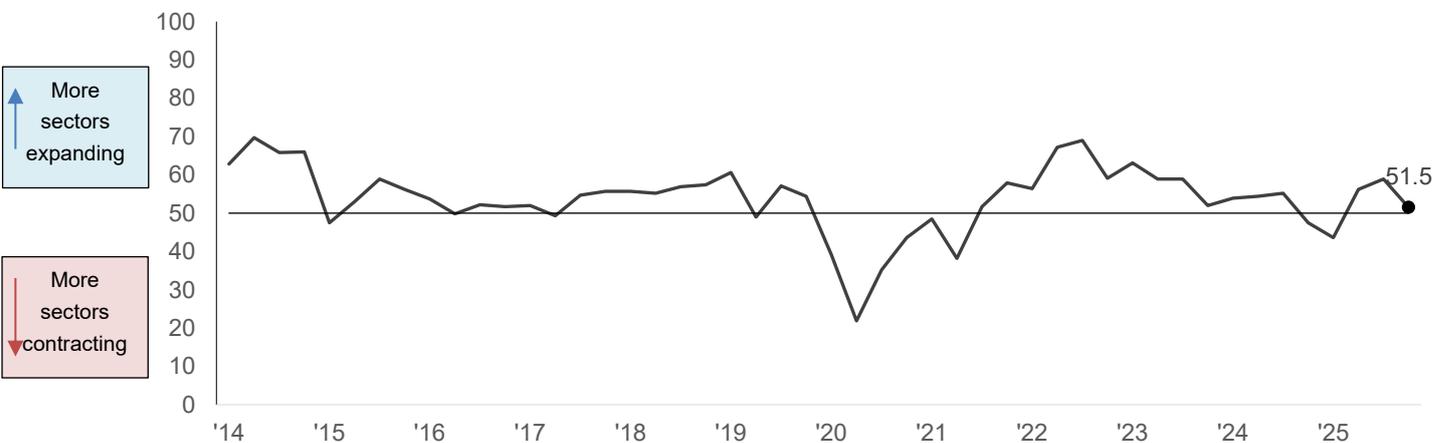

Resident employment growth in 2025 was concentrated in *Financial Services* and *Health & Social Services*, while shifting away from lower-skilled sectors, particularly *Retail Trade* and *Food & Beverage Services*. In 2025, resident employment declined in *Information & Communications* and *Professional Services*, after a marked increase in 2024. In 2025, non-resident employment growth was driven by the continued increase in Work Permit Holders in *Construction*.

With varied employment changes across industries, the Employment Diffusion Index (EDI)⁷ provides a useful summary measure of the breadth of employment creation across the economy. Understanding the extent to which employment growth is broad-based also adds further insights into labour market conditions.

The EDI decreased from 58.9 in 3Q 2025 to 51.5 in 4Q 2025 after rising from 56.2 in 2Q 2025 [Chart 2]. With an EDI reading of more than 50, more sectors are still expanding than contracting in 4Q 2025, with employment growth continuing to be broad-based.

The weaker EDI reading in 4Q 2025 was observed in outward-oriented sectors⁸ (3Q 2025: 56.1; 4Q 2025: 43.9), while EDI in domestic-oriented sectors⁹ remained the same as the previous quarter (3Q and 4Q 2025: 63.1).

Chart 2: Employment Diffusion Index for Total Employment (excl. MDW)

Source: Administrative Records and Labour Force Survey, Manpower Research & Statistics Department, MOM

⁷ The Employment Diffusion Index (EDI) measures the breadth of employment growth across sectors. An EDI of '0' indicates all industries contracted, '100' indicates all industries expanded, and '50' indicates an equal number of sectors expanded and contracted. Values above '50' mean more sectors are expanding than contracting, making it a key benchmark for analysing overall economic health. For more information about the methodology, please refer to the *Box Article: Employment Diffusion Index* in the *Labour Market Report Second Quarter 2025*.

⁸ Outward-oriented sectors include *Information & Communications*, *Manufacturing*, *Wholesale Trade*, *Transportation & Storage*, *Accommodation*, *Professional Services*, and *Financial & Insurance Services*.

⁹ Domestic-oriented sectors include *Construction*, *Retail Trade*, *Food & Beverage Services*, *Real Estate Services*, *Administrative & Support Services*, *Community & Social Services* (excludes MDW and activities related to foreign embassies and armed personnel) and *Others (Agriculture, Mining, etc.)*.

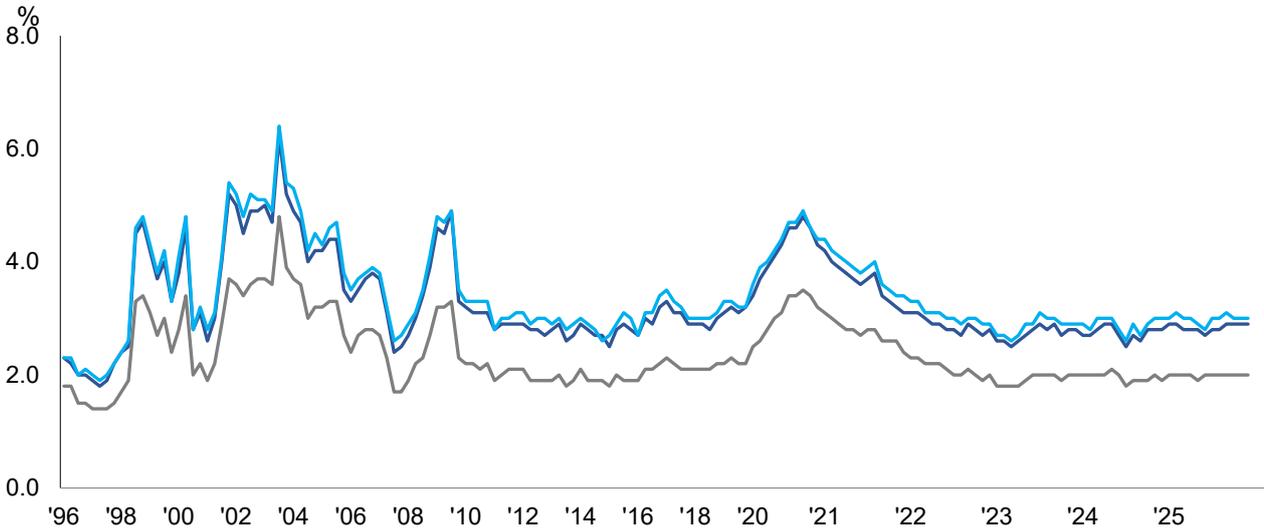

Unemployment

Unemployment rates in December 2025 (overall: 2.0%; resident: 2.9%; citizen: 3.0%) remained low and stable [Chart 3].^{10, 11}

Chart 3: Unemployment Rate (Seasonally Adjusted)

2025

	Aug	Sep	Oct	Nov	Dec
Citizen (C)	3.0%	3.1%	3.0%	3.0%	3.0%
Resident (R)	2.8%	2.9%	2.9%	2.9%	2.9%
Overall (O)	2.0%	2.0%	2.0%	2.0%	2.0%

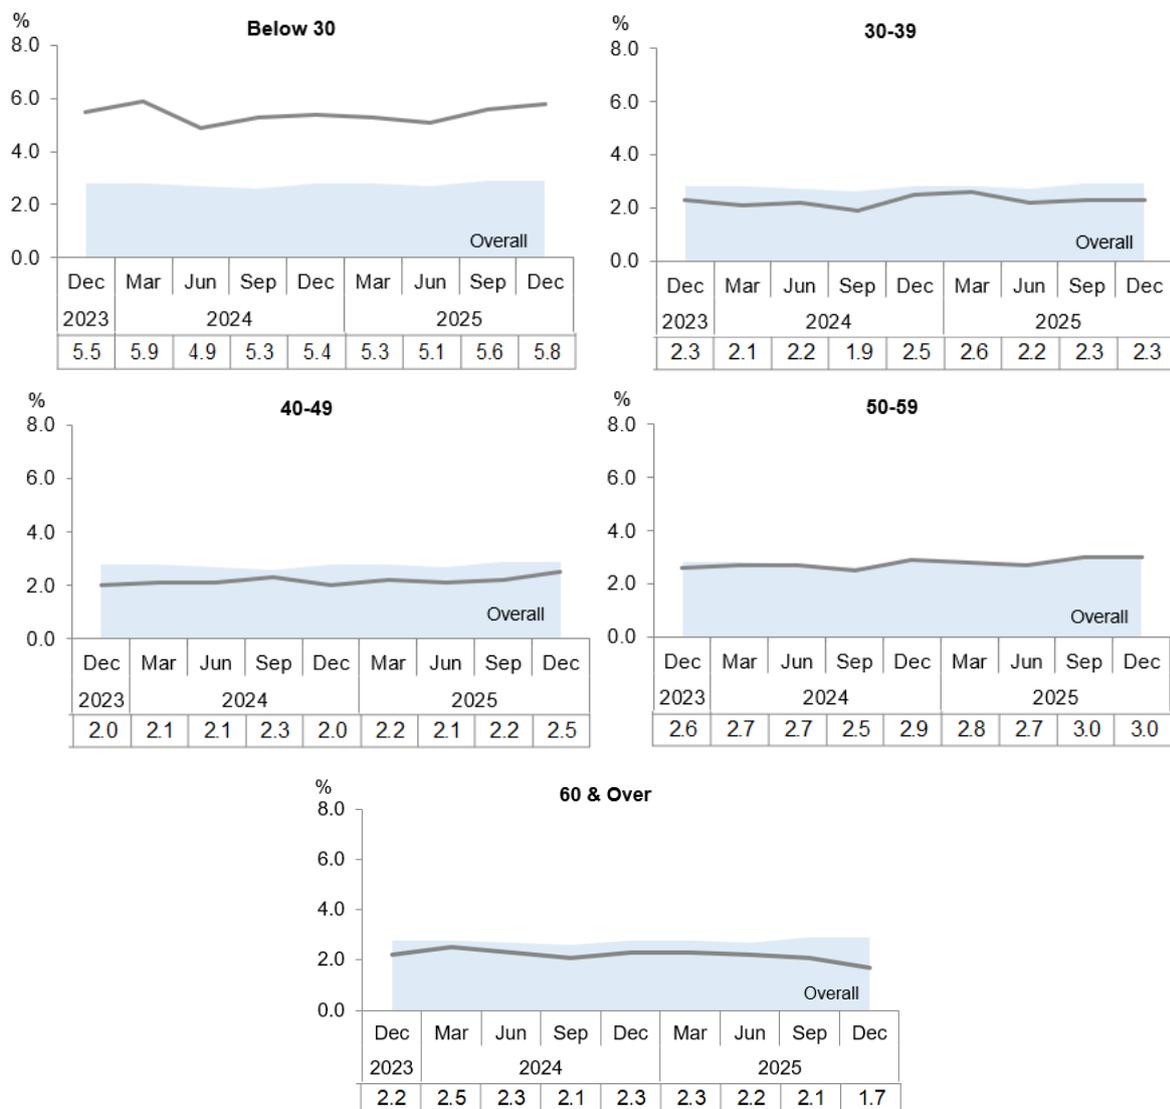

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

¹⁰ Other than unemployment rate, time-related underemployment rate is another measure of labour underutilisation. The time-related underemployment rate among residents in 4Q 2025 was 2.0%, slightly lower compared to the 2.1% recorded in the same period a year ago.

¹¹ To ensure timely monitoring of the state of the labour market, top-line unemployment rates are published on a monthly basis. However, the profile of unemployed persons will continue to be monitored on a quarterly basis. This is to smooth out any short-term month on month fluctuations to enable a more meaningful analysis of the groups who need help.

The unemployment rate for older workers aged 60 and above declined for the third consecutive quarter from 2.1% in September 2025 to 1.7% in December 2025, while the unemployment rate for those in their 50s remained stable at 3.0% over the quarter [Chart 4]. In contrast, younger residents aged below 30 experienced a modest rise in unemployment from 5.6% in September 2025 to 5.8% in December 2025, a level last seen in March 2024. The rise is more contained compared to other advanced economies, where unemployment among younger workers has risen more noticeably.¹²

Chart 4: Resident Unemployment Rate by Age
(Seasonally Adjusted)

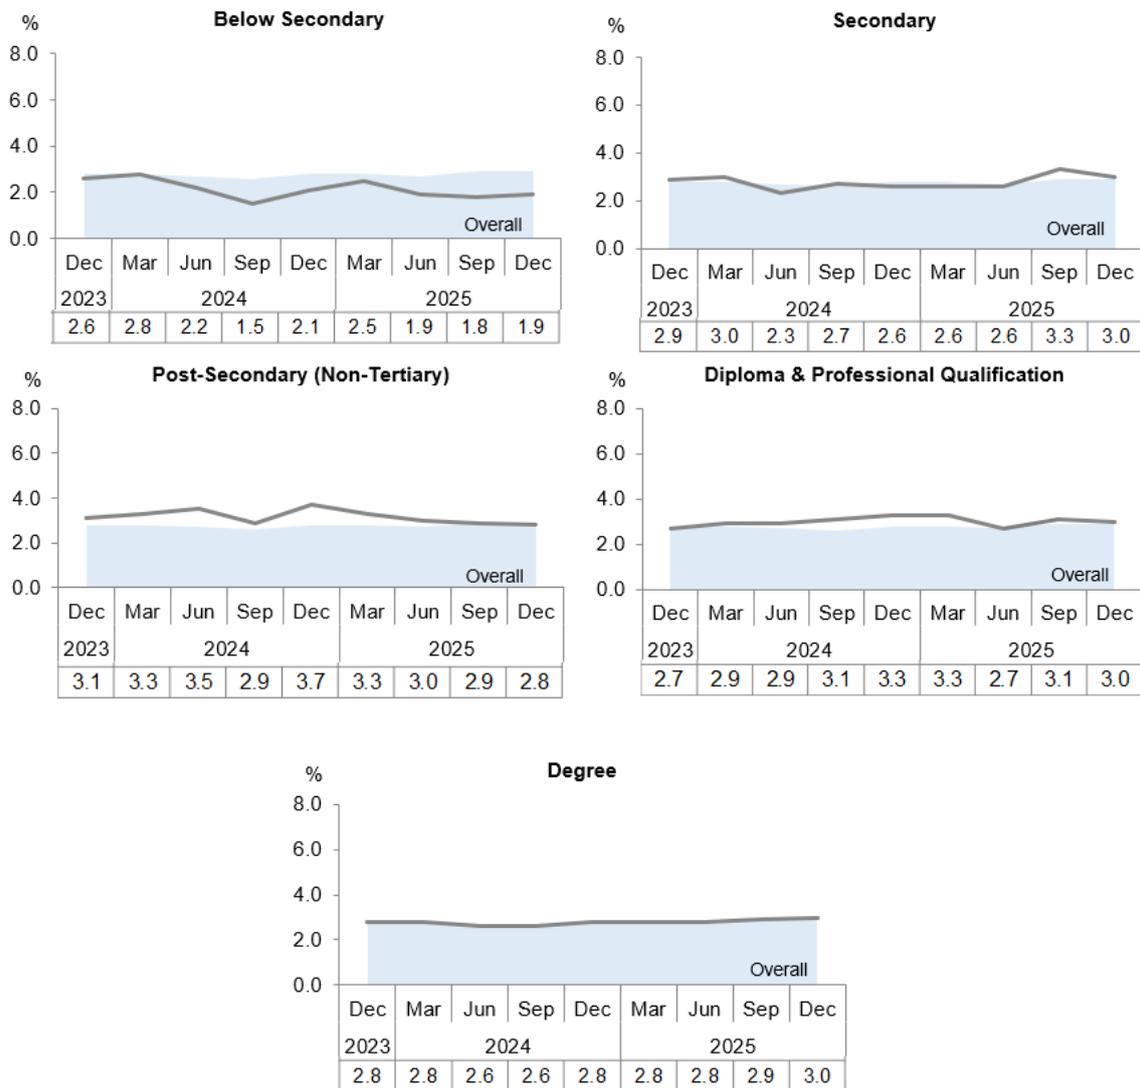

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

Note: The shaded region in the chart represents the range of unemployment rates which is at or below the overall resident unemployment rate in the respective time periods.

¹² In the United States, unemployment among those aged 20 to 24 rose from 7.5% in 3Q 2024 to 8.8% in 3Q 2025 (latest available). Similarly, the unemployment rate of the young aged below 30 increased in France (14.9% to 15.4%) and Germany (5.7% to 6.4%) over the same period. Source: US Bureau of Labor Statistics, and Eurostat.

Unemployment rates declined across all education groups except those with degree and below secondary school education. Degree holders experienced a modest rise in unemployment (from 2.9% to 3.0%) while those with below secondary school education saw a slight increase from 1.8% in September to 1.9% in December 2025, but remained lower than the levels observed the same time last year (December 2024: 2.1%) [Chart 5].

Chart 5: Resident Unemployment Rate By Education
(Seasonally Adjusted)

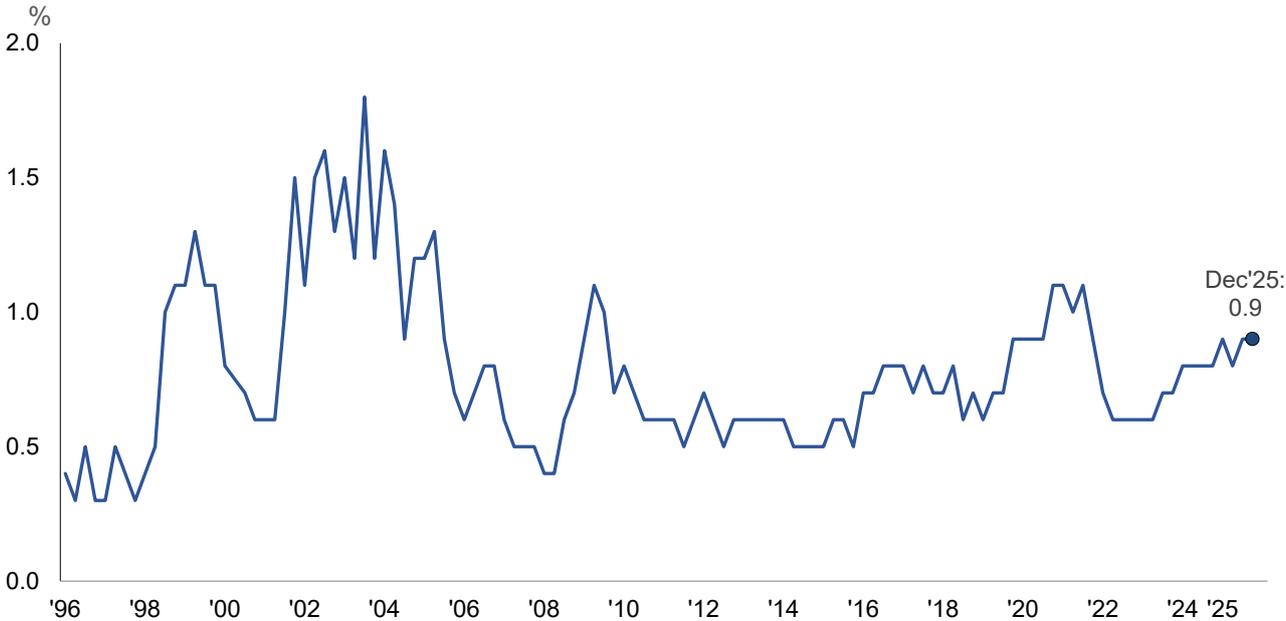

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

Note:

The shaded region in the chart represents the range of unemployment rates which is at or below the overall resident unemployment rate in the respective time periods.

The resident long-term unemployment rate has also held steady at 0.9% in December 2025, indicating continued stability in job prospects [Chart 6].

Chart 6: Resident Long-Term Unemployment Rate (Seasonally Adjusted)

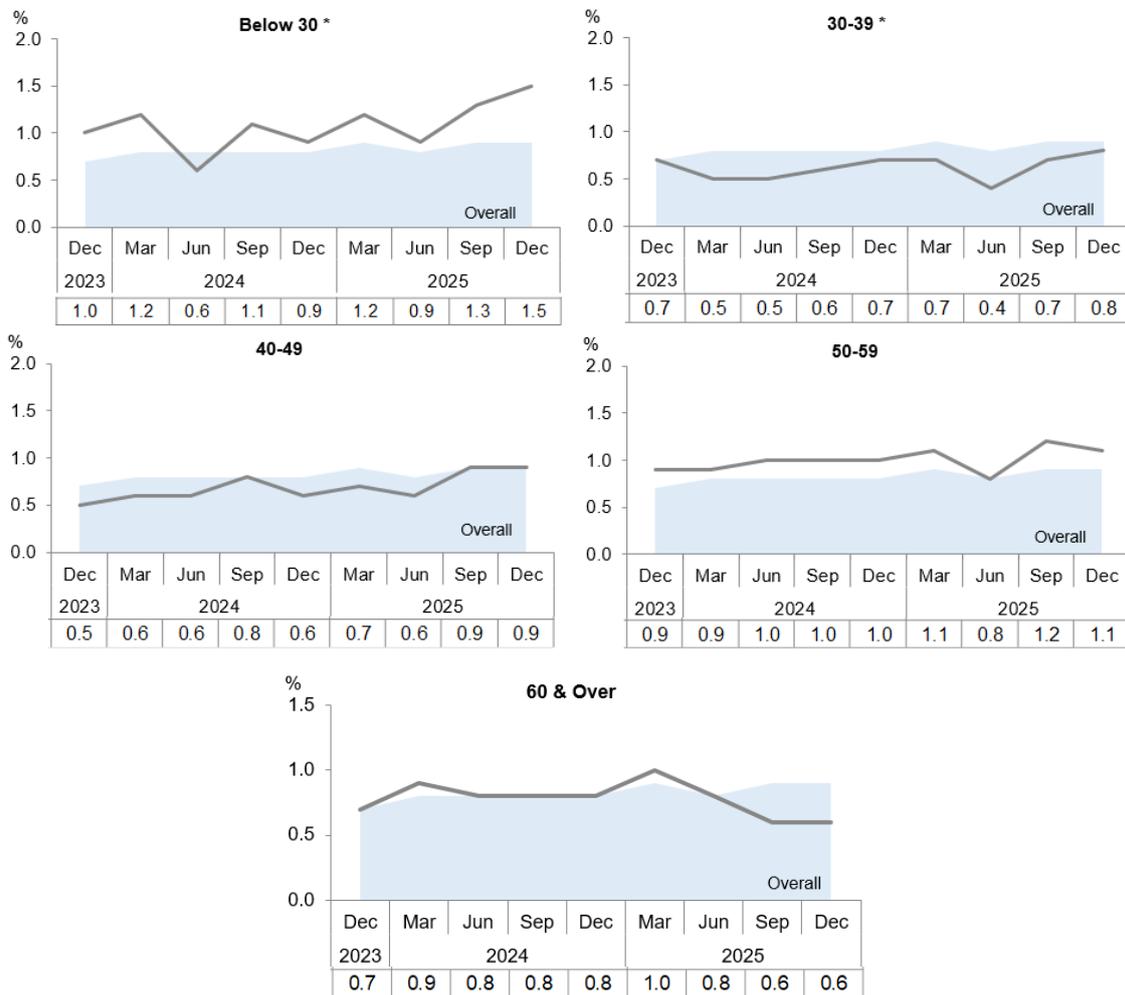

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

Note: Long-term unemployed refers to those unemployed for at least 25 weeks.

The long-term unemployment rates for seniors aged 60 and over stayed at 0.6% in December 2025 [Chart 7]. Taken together with their improvements in unemployment rates, these reflect reduced job search difficulty of seniors aged 60 and over. Younger residents aged below 30 saw a slight increase in long-term unemployment from 1.3% in September 2025 to 1.5% in December 2025. This suggests that suitable job matches are taking longer for some young jobseekers as they navigate the job market to find positions that align with their skills and expectations.¹³

Chart 7: Resident Long-term Unemployment Rate by Age (Seasonally Adjusted)

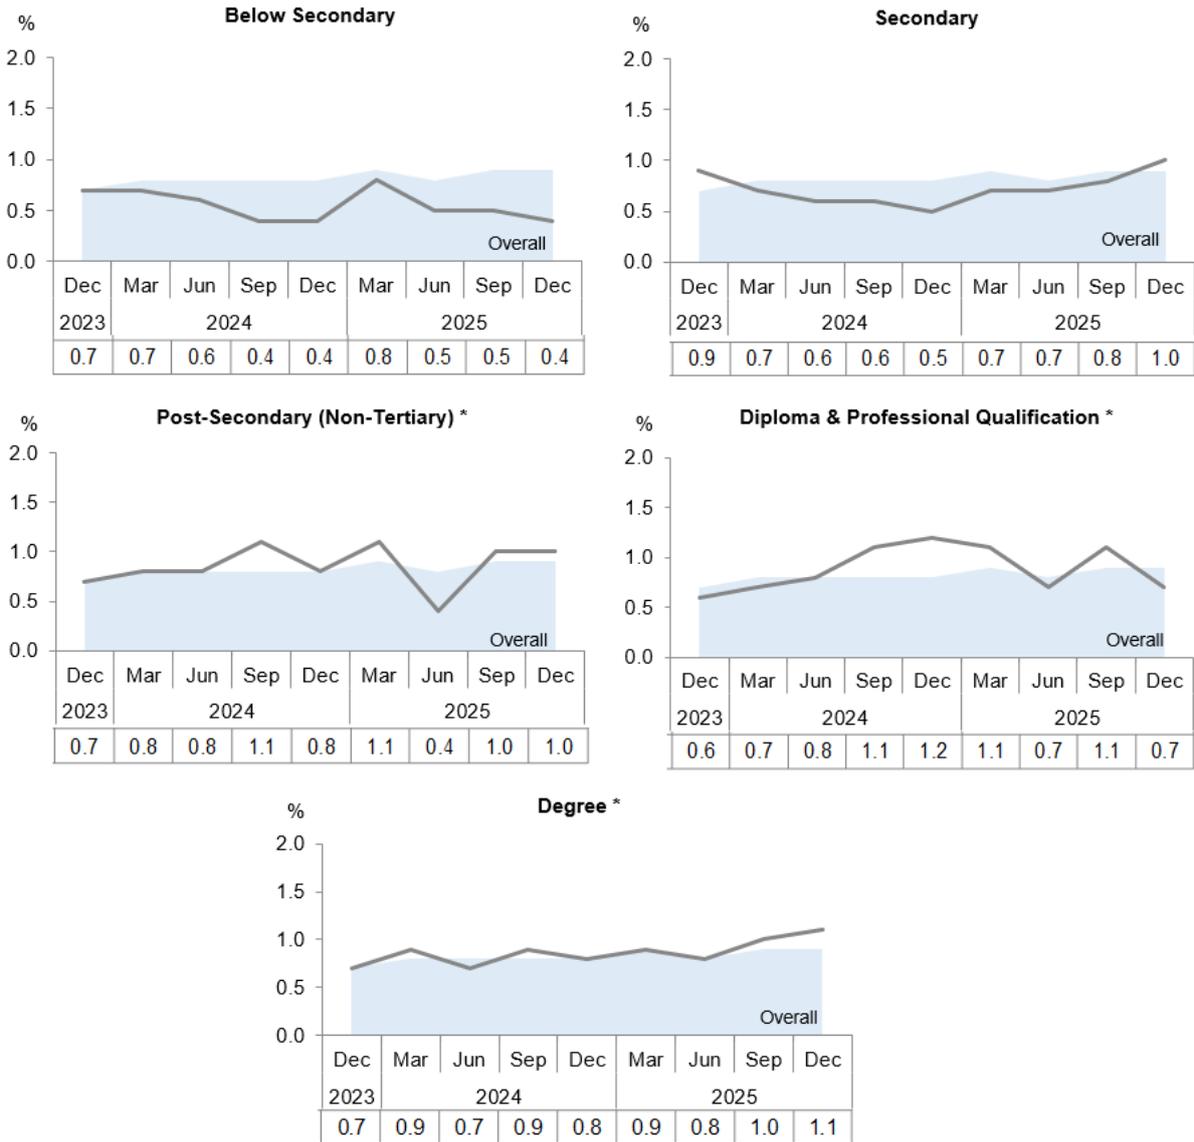

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

- Notes: (1) Long-term unemployed refers to those unemployed for at least 25 weeks.
- (2) * These series are not seasonally adjusted because they have weak or no seasonality.
- (3) The shaded region in the chart represents the range of long-term unemployment rates which is at or below the overall resident long-term unemployment rate in the respective time periods.

¹³ Entry-level PMET job openings (32,500 in December 2025) spanned sectors such as *Health & Social Services* and *Professional Services*, with roles including nursing, social work, pre-primary education, auditing and IT support functions. Entry-level PMET job vacancies refer to PMET vacancies with a minimum salary within the range of \$2,300 and \$5,000, adjusted yearly for inflation, which are suitable for fresh graduates and are advertised on job portals to recruit local job seekers. Source: Data on job vacancies is obtained from surveys conducted by Manpower Research and Statistics Department (MOM), job advertisement sites and MyCareersFuture.

By education groups, the resident long-term unemployment rates have either remained the same or declined for most groups, though degree holders experienced a modest rise from 1.0% in September 2025 to 1.1% in December 2025 [Chart 8]. This points to some jobseekers remaining unemployed longer while waiting for suitable job offers that match their skills and expectations.

Chart 8: Resident Long-Term Unemployment Rate By Education (Seasonally Adjusted)

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Long-term unemployed refers to those unemployed for at least 25 weeks.
- (2) * These series are not seasonally adjusted because they have weak or no seasonality.
- (3) The shaded region in the chart represents the range of long-term unemployment rates which is at or below the overall resident long-term unemployment rate in the respective time periods.

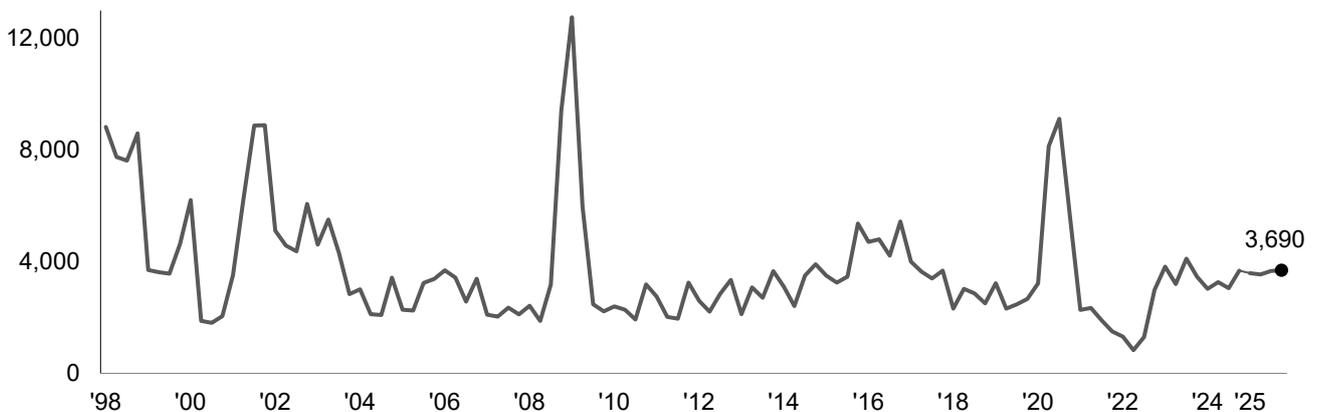

Retrenchment

The number of retrenchments in 4Q 2025 (3,690) was comparable to 3Q 2025 (3,670) [Chart 9].

For the full year, retrenchments totalled 14,490. Sectors with higher retrenchment numbers – such as *Financial Services* (2,240) and *Professional Services* (1,900) – also recorded relatively higher PMET job vacancies. The overlap between higher retrenchments and higher PMET vacancies in these sectors suggests that while some jobs are being displaced as firms restructure, hiring continues for others. Taken together, these trends suggest ongoing restructuring and skills transition rather than a contraction in demand for PMET roles.

Business reorganisation or restructuring (75.2%) remained the main reason for retrenchments in 4Q 2025.¹⁴ Fewer were due to poor business/business failures¹⁵ (17.0%), concerns of high costs (8.3%) or recession/downturn in the industry (1.8%).

Chart 9: Retrenchments

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data on the number of retrenchments are rounded to the nearest 10.
- (2) Before 2006, data pertain to private sector establishments (each with at least 25 employees). From 2006 onwards, it also includes the public sector.

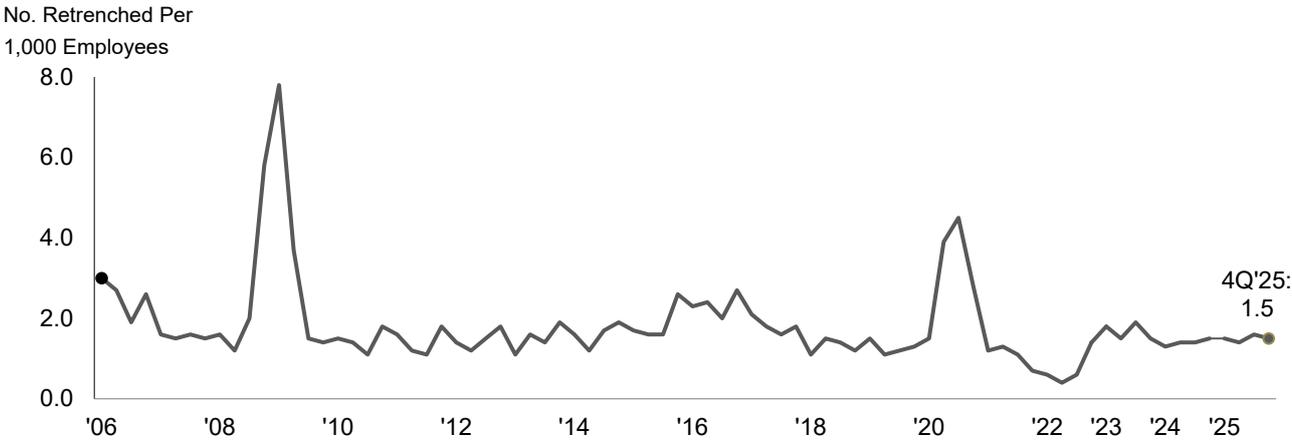

¹⁴ Establishments can indicate more than one reason for their retrenchment.

¹⁵ Not due to recession.

Similar to the number of retrenchments, the incidence of retrenchment stayed low at 1.5 retrenched per 1,000 employees, a decline from the previous quarter of 1.6 retrenched per 1,000 employee and remained below non-recessionary norms (2014 to 2019 quarterly average of 1.7 retrenched per 1,000 employees) [Chart 10].

For the full year, the incidence of retrenchment was at 6.3 retrenched per 1,000 employees, an increase from 5.9 retrenched per 1,000 employees in 2024 but lower than 6.7 retrenched per 1,000 employees in 2023.

Chart 10: Incidence of Retrenchment

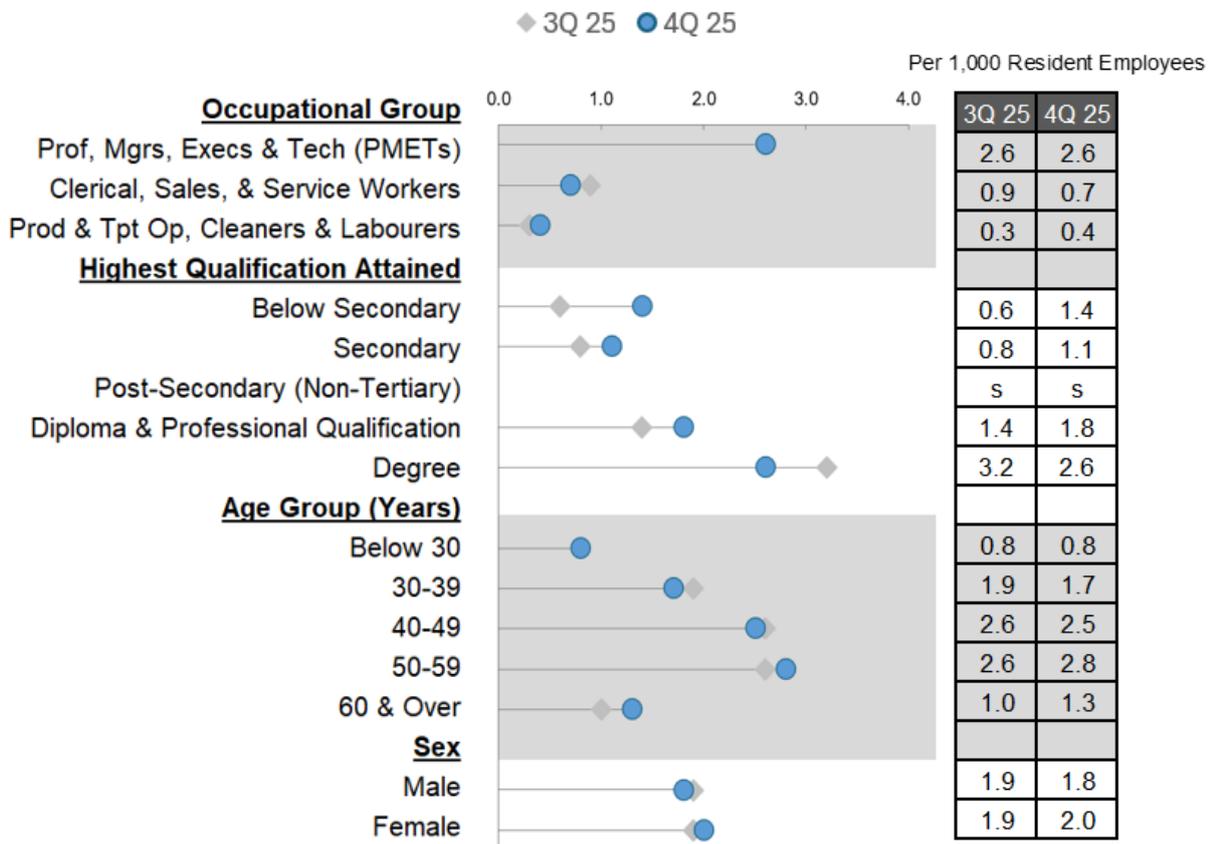

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

Mirroring the workforce composition, residents formed the majority of all retrenched employees in 4Q 2025 (77.7%) and full year 2025 (73.7%).¹⁶

In 4Q 2025, the incidence of retrenchment among resident PMETs and degree holders, both at 2.6 retrenched per 1,000 resident employees [Chart 11], were above the incidence of retrenchment among all residents (1.9). For the full year, resident PMET retrenchments¹⁷ rose to 10.1 retrenched per 1,000 resident employees, exceeding the pre-recessionary norm (2015-2019 average: 8.0),¹⁸ which reflects PMETs' greater exposure to outward-oriented sectors where restructuring has intensified.

Chart 11: Incidence of Retrenchment Among Residents by Occupation Group, Highest Qualification Attained, Age and Sex

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Notes:

- (1) Data pertain to residents from private sector establishments (each with at least 25 employees) and the public sector.
- (2) "s": Data suppressed due to small number of observations.

¹⁶ In 2025, about 9 in 10 retrenched residents received retrenchment benefits. Of these retrenched residents who received retrenchment benefits, close to 8 in 10 received the recommended amount of retrenchment benefits of at least 2 weeks of salary per year of service.

¹⁷ In 2025, the incidence of retrenchment among resident clerical, sales & service workers and resident production & transport operators, cleaners and labourers were 2.9 and 1.9 retrenched per 1,000 employees respectively.

¹⁸ By age, residents in their 50s have a higher incidence of retrenchment at 11.1 retrenched per 1,000 resident employees in 2025. Other age groups recorded incidence of 3.0 (aged below 30), 7.0 (30-39), 9.8 (40-49) and 4.9 (60 & over) per 1,000 resident employees.

Short Work-week Or Temporary Layoff

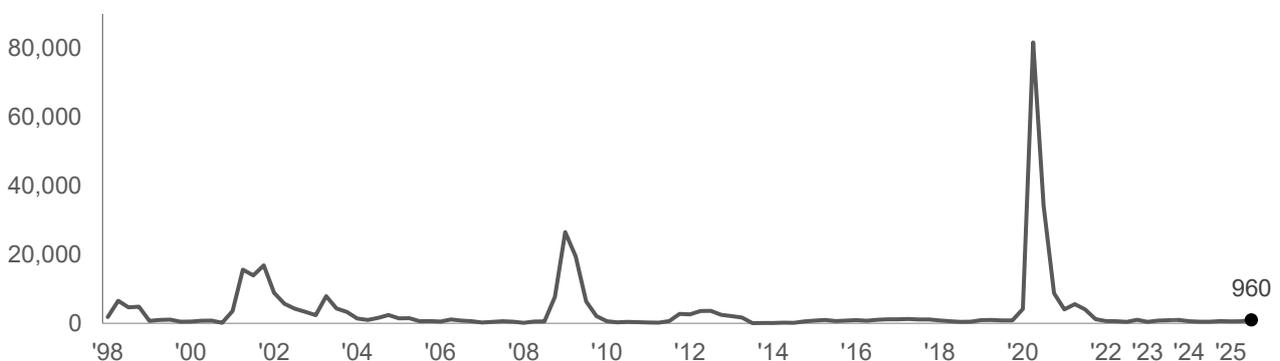

The number of employees who were placed on short work-week or temporary layoff increased for the 3rd consecutive quarter (2Q 2025: 620; 3Q 2025: 800; 4Q 2025: 960) [Chart 12]. Most employees in 4Q 2025 were placed on short work-week (680) instead of temporary layoff (280). Taken together with the stable and low number of retrenchments, this shows firms generally relied on natural attrition and reduced hours to manage workforce size.

Over the quarter, *Real Estate Services* (from 0 in 3Q 2025 to 80 in 4Q 2025), *Food & Beverage Services* (from 20 to 120), *Health & Social Services* (from 20 to 40) and *Wholesale Trade* (from 70 to 80) saw more employees placed on a short work-week.

Non-PMETs formed about 68.5% (or 460) of those who were placed on short work-week in 4Q 2025. In recessionary times, short work-week also often affect non-PMETs as they are more likely to be hourly-rated employees, as employers were more likely to shorten their hours during times of business slack.

For the full year of 2025, the number of employees placed on short work-week increased from 1,950 in 2024 to 2,490 in 2025, but this is still lower than the 2,810 in 2023 and pandemic peak of 72,690 in 2020. Similarly, the number of temporary layoffs increased from 260 in 2024 to 460 in 2025, remaining within the 2015 to 2019 range of 310 to 710.

Chart 12: Number of Employees on Short Work-week or Temporary Layoff

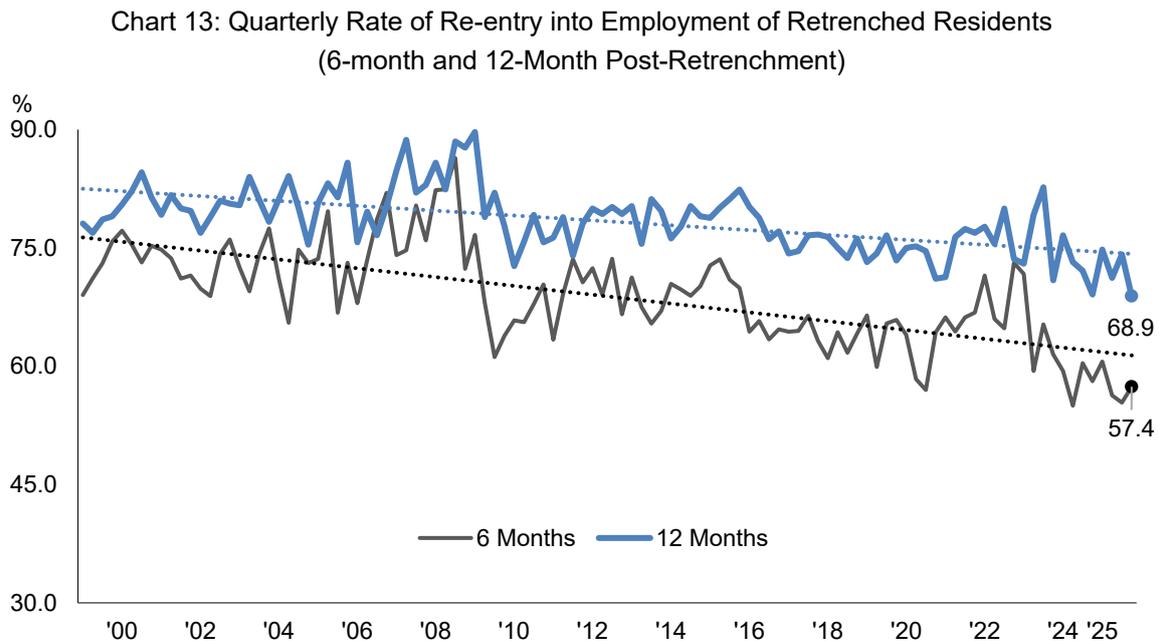

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data are rounded to the nearest 10.
- (2) Before 2006, data pertain to private sector establishments (each with at least 25 employees). From 2006 onwards, it also includes the public sector.

Re-entry Into Employment

The resident rate of re-entry into employment six months after retrenchment rose from 55.4% in 3Q 2025 to 57.4% in 4Q 2025 [Chart 13].¹⁹ In 4Q 2025, 68.9% of those retrenched 12 months earlier had secured new employment, indicating that re-entry prospects improve with time.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Notes:

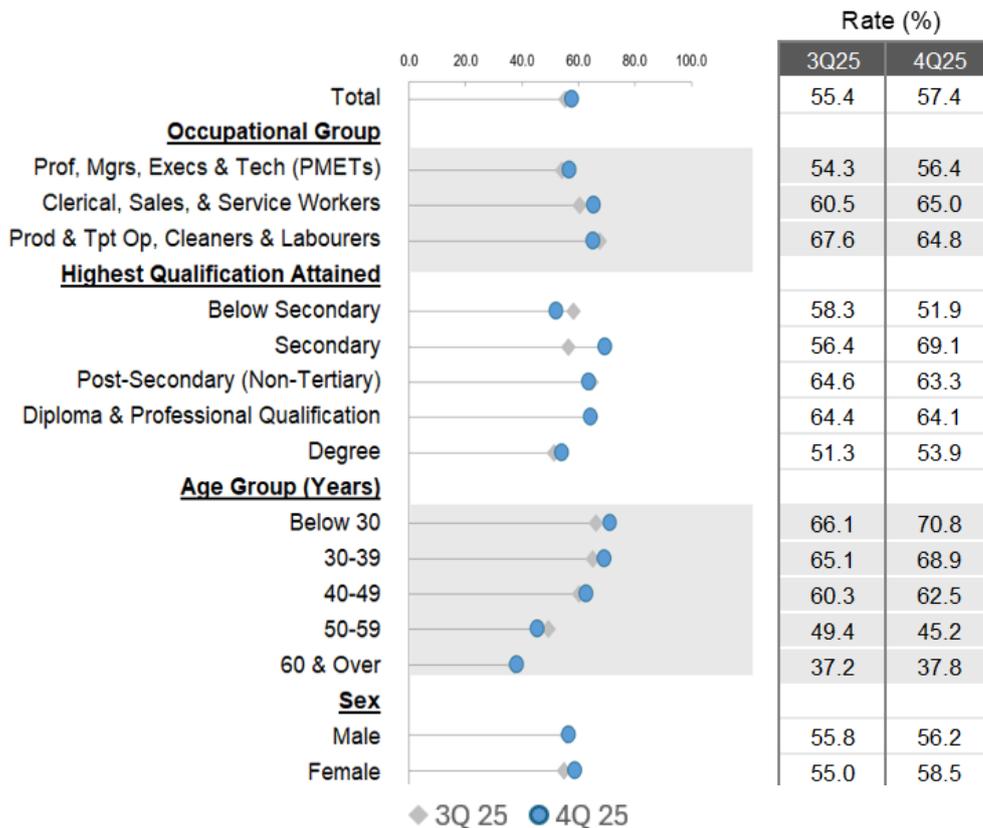

- (1) Data refer to re-entry rates for residents retrenched 6 months ago and 12 months ago by private sector establishments (each with at least 25 employees) and the public sector. For example, the 6-month re-entry rate for 4Q 2025 refers to residents retrenched in 2Q 2025, and the 12-month re-entry rate for 4Q 2025 refers to residents retrenched in 4Q 2024.
- (2) Data on re-entry into employment are cohort-specific. Two different cohorts of workers laid off could yield different re-entry rates depending on the profile of the workers involved. Also, the data based on administrative records do not capture individuals who went into self or informal employment or underwent training while looking for a job.
- (3) Before 2007, data pertain to residents retrenched from private sector establishments, each with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector comprising government ministries, organs of state and statutory boards.
- (4) Before 2010, data pertain to employees who were retrenched from permanent positions. From 2010 onwards, data also include fixed-term contract employees who were retrenched.

¹⁹ In 2025, the mean duration for retrenched residents to re-enter into employment within six months post-retrenchment was 2.6 months (up from 2.5 months in 2024), 2.5 months for those aged below 30, 2.6 months for those in their 30s, 40s and 50s, and 2.3 months for those aged 60 and above.

The increase in six-month re-entry rate was observed across several groups of workers. Among PMETs, it rose from 54.3% in 3Q 2025 to 56.4% in 4Q 2025 [Chart 14]. Improvements were also observed for clerical support, service and sales workers (60.5% to 65.0%) and secondary school holders (56.4% to 69.1%). Among degree holders, the six-month re-entry rate increased from 51.3% in 3Q 2025 to 53.9% in 4Q 2025 after falling for three consecutive quarters.²⁰

Across groups by education and occupation, re-entry rates 12 months after retrenchment were at around 70% or higher in 2025. Most retrenched workers who re-entered employment were able to recover their wages, with around 6 in 10 workers receiving similar or higher wages than in their previous jobs.²¹ Workers retrenched from *Financial Services, Information & Communications*, and *Professional Services* – sectors that recorded higher retrenchment – were more likely to experience full wage recovery, reflecting transferable skills that enabled comparable wages in their new jobs.

Chart 14: Quarterly Rate of Re-entry into Employment of Retrenched Residents (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Note: Data refer to re-entry rates in 3Q 2025/4Q 2025 for residents retrenched in 1Q 2025/2Q 2025 by private sector establishments (each with at least 25 employees) and the public sector and re-entered employment, 6 months post-retrenchment.

²⁰ The six-month re-entry rate into employment for degree holders declined from 56.8% in 4Q 2024 to 51.3% in 3Q 2025.

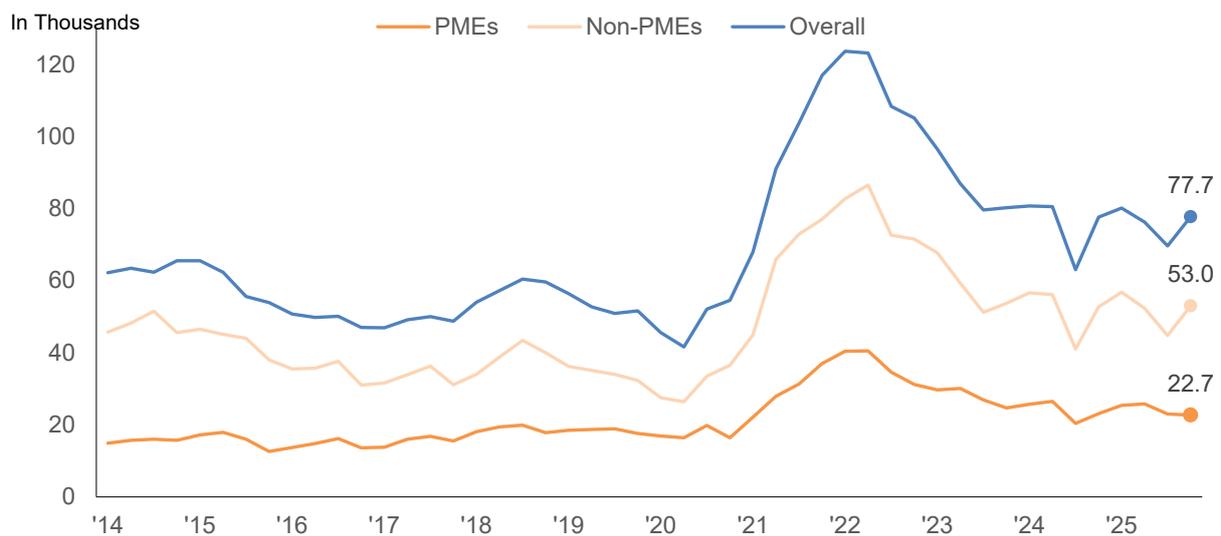

²¹ This is based on retrenched residents who re-entered employment three to six months after retrenchment.

Job Vacancies

Job vacancies increased from 69,600 in September 2025 to 77,700 in December 2025, reversing the dip from June 2025 (76,200) [Chart 15].²² The increase was driven mainly by *Construction*, reflecting manpower demand for major infrastructure projects such as Terminal 5 and the Marina Bay Sands expansion. The number of job vacancies also rose in *Information & Communications*, *Professional Services*, and *Health & Social Services*, but moderated in other sectors such as *Food & Beverage Services*²³ and *Transportation & Storage*.

For the full year of 2025, the annual average of job vacancies stood at 75,900, slightly higher than 75,400 in 2024. Among them, 24,200 were PME vacancies, higher than 23,900 in 2024.

Chart 15: Job Vacancies²⁴, by Occupation Groups

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

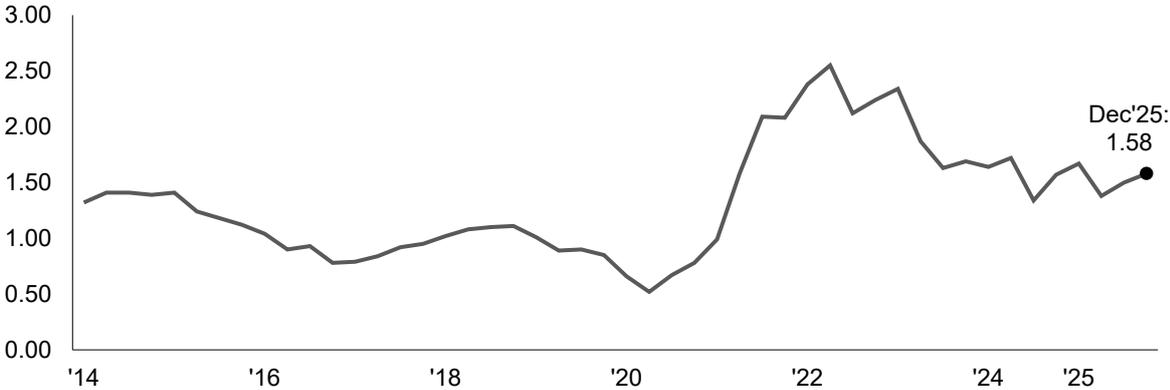

²² The number of estimated job vacancies likely-to-be filled-by residents, which also saw an increase in December 2025, formed around 7 in 10 of all vacancies.

²³ According to the Ministry of Trade and Industry Singapore's Economic Survey of Singapore 4Q 2025, the modest growth in *Food & Beverage Services* suggests a partial recovery from earlier weakness but the full-year contraction and structural headwinds point to subdued prospects for the sector in the near term.

²⁴ Overall job vacancy is seasonally adjusted, while job vacancies of PMEs and non-PMEs are non-seasonally adjusted.

Labour demand remained firm. The overall job vacancy to unemployed persons ratio increased from 1.50 in September 2025 to 1.58 in December 2025, indicating that job vacancies continued to exceed the number of unemployed persons [Chart 16].

Chart 16: Ratio of Job Vacancies to Unemployed Persons (Seasonally Adjusted)

Source: Labour Market Survey and Labour Force Survey, Manpower Research & Statistics Department, MOM

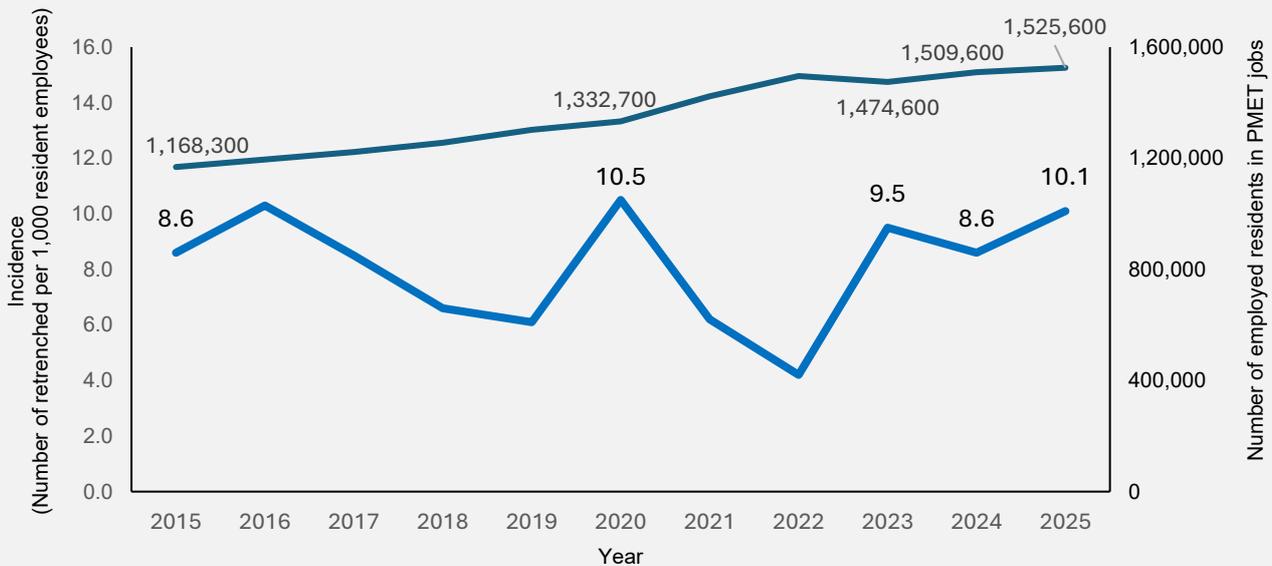

Note: Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy are estimated assuming that private sector establishments with less than 25 employees have the same vacancy rate as those with 25 to 49 employees.

Impact of AI on the Workforce: Recent Trends in PMETs’ Labour Market Outcomes

The Ministry of Manpower (MOM) has examined recent trends in Professionals, Managers, Executives and Technician (PMET) roles to assess whether concerns around AI-driven job displacement are borne out by data. While the evidence does not point conclusively to broad-based displacement, there are signs of restructuring that warrant continued monitoring.

In recent years, PMET retrenchments have trended upward in both number and incidence, although both are objectively low. The incidence of retrenchment among resident PMETs rose from 2024 to 2025, reaching 10.1 retrenched per 1,000 resident employees (Chart A1) – above the pre-recessionary average. *Financial Services, Information & Communications* and *Professional Services* are among the sectors with higher PMET retrenchment numbers. Notwithstanding the uptick in retrenchments, the number of residents employed in PMET jobs has continued to trend upward since 2023, rising by 3.5% to 1,525,600 in 2025 (Chart A1).

Chart A1: Incidence of retrenchments among resident PMETs and number of employed residents in PMET jobs

Source: Labour Market Survey and Comprehensive Labour Force Survey, Manpower Research & Statistics Department, MOM

Note: Data from the Labour Market Survey pertains to private sector establishments (each with at least 25 employees) and the public sector.

The same sectors with higher retrenchments – *Financial Services, Information & Communications* and *Professional Services* – also recorded relatively high numbers of PMET job vacancies in December 2025 (Chart A2), and the overall job vacancy to unemployed persons ratio for PMET occupations remained above one at 1.11. Job vacancies among these sectors with higher PMET job vacancies have

also increased over the decade¹ even after normalising from the peaks observed during the exceptionally tight labour market in 2022 ([Chart A3](#)).

Taken together, these trends suggest ongoing restructuring and skills transition rather than a contraction in demand for PMET roles.

Chart A2: Sectors with higher numbers of PMET job vacancies, Dec 2025

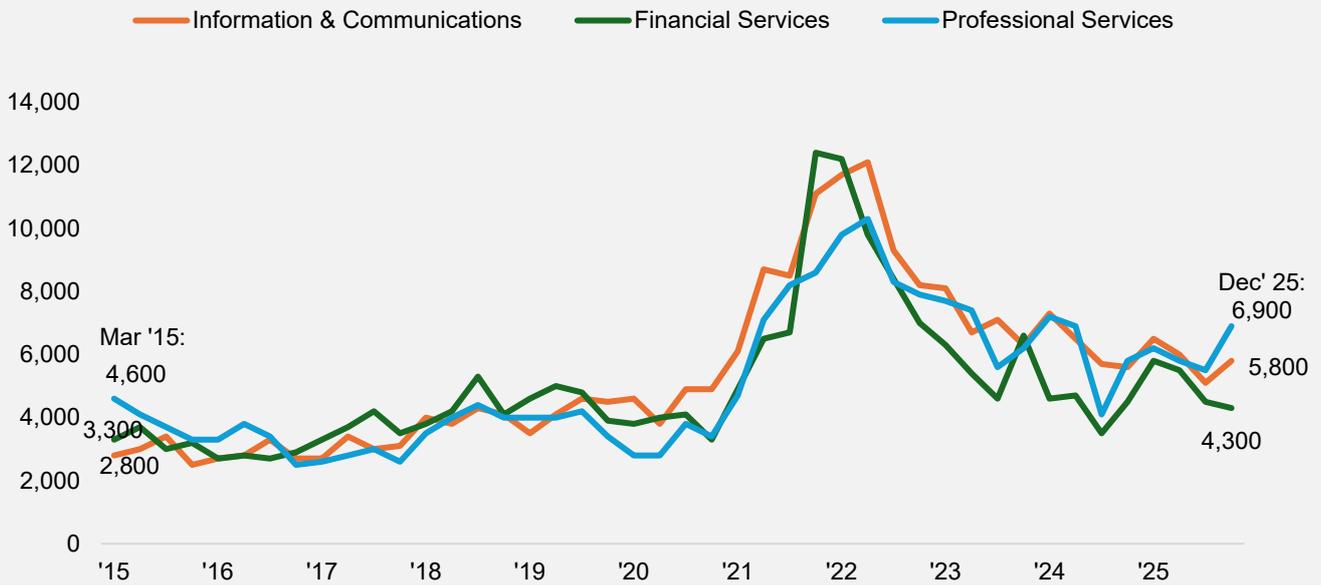

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data on the number of job vacancies are rounded to the nearest 100.

¹ The number of PMET vacancies in these sectors stood at 14,600 in December 2025, higher than the same period last year (13,900). The total number of vacancies in these sectors was at 17,100, up from 16,000 in December 2024.

Chart A3: Job vacancies by sectors which have higher PMET vacancies in December 2025

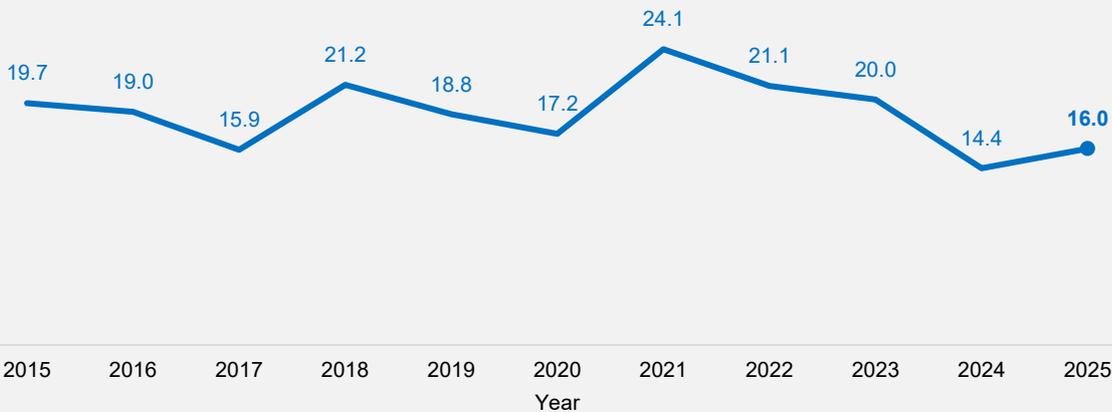

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data on the number of job vacancies are rounded to the nearest 100.
- (2) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

Consequently, skills mismatches are becoming more pronounced. Among PMET roles, the share of vacancies unfilled for at least six months rose from 14.4% in 2024 to 16.0% in 2025 (Chart A4). Employers have cited difficulties filling specialised roles requiring specific technical skills or experience, including data scientists, teaching and training professionals, and civil engineers. This points to a labour market where demand for professionals is shifting rather than declining, and where workers may require time to adapt to changing job requirements.

Chart A4: PMET job vacancies unfilled for at least six months (% of total PMET job vacancies)

Note: Data is as of September 2025

In summary, available data does not indicate broad-based displacement of PMET roles. However, hiring patterns are becoming more differentiated, transitions are taking longer for some groups, and this might explain why public anxiety is running ahead of objective labour market indicators.

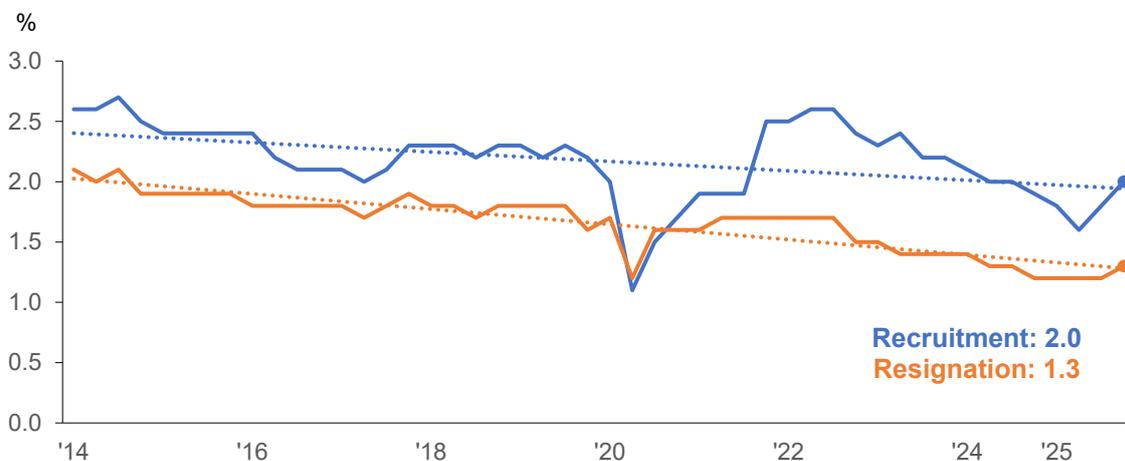

Labour Turnover

In 4Q 2025, the average monthly recruitment and resignation rates rose slightly to 2.0% and 1.3% respectively, up from the previous quarter (1.8% and 1.2%). They remained low compared to historical averages, after a general downtrend over the decade [Chart 17].

Higher labour turnover is more pronounced in sectors like *Administrative & Support Services*, particularly in PWM segments such as *Security & Investigation* (recruitment: 2.3% to 2.6%; resignation: 1.3% to 1.7%) and *Cleaning & Landscaping* (recruitment: 2.0% to 2.7%; resignation: 1.4% to 2.2%). Lower barriers to entry in these occupations make it easier for workers to move between employers.

In general, PMETs see a lower labour turnover compared to non-PMETs, with their recruitment (1.5%) and resignation rates (0.9%) significantly lower than that of Clerical, Sales and Services Workers (CSSWs) (2.6%; 1.6% respectively) and Production & Transport Operators, Cleaners & Labourers (PTOCLs) (2.4%; 1.5% respectively), reflecting the labour churn among lower skilled workers who tend to take on jobs with lower barriers of entry.

Chart 17: Average Monthly Recruitment And Resignation Rates (Seasonally Adjusted)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) The average monthly resignation / recruitment rate is defined as the average number of persons who resigned / who were recruited in a month divided by the average number of employees in the establishment.

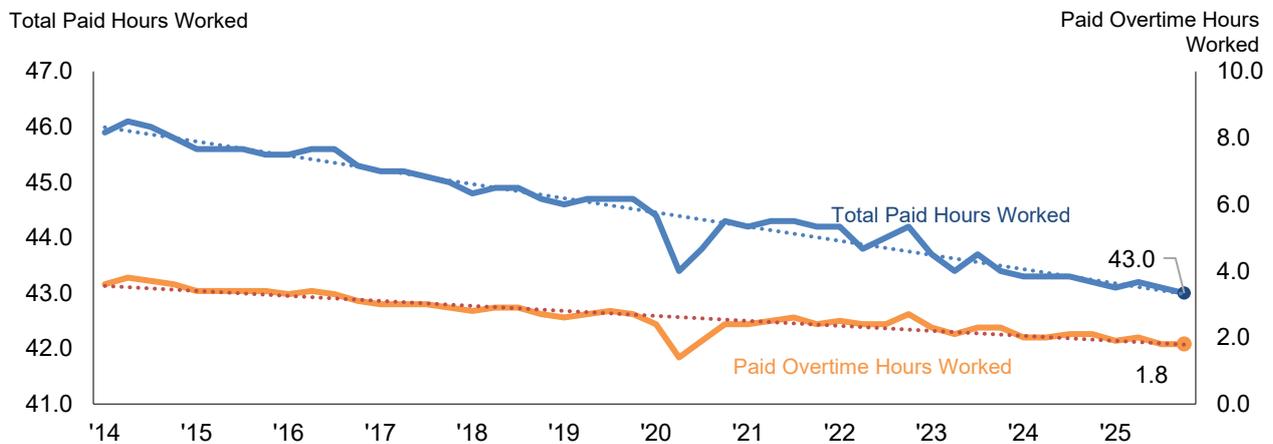

Hours Worked

In December 2025, the average weekly total paid hours worked per employee (43.0 hours) and the average weekly paid overtime hours worked per employee (1.8 hours) were comparable to the previous quarter (43.1 hours and 1.8 hours, respectively) [Chart 18].²⁵

The long-term downtrend in number of average weekly total paid hours and paid overtime hours worked per employee mirrored observations based on other measures of hours of work, including actual and usual hours of work.²⁶ This reduction in working time, coupled with the longer-term uptrend in productivity, indicates an improvement in efficiency of time usage in Singapore's labour market over the years.

Over the quarter, a larger decline in average weekly total paid hours worked per employee were observed among part-timers (from 26.4 hours to 25.2 hours) compared to full-timers (remaining at 44.2 hours). With little change in their paid overtime hours worked (from 0.1 hours to 0.2 hours), this suggests that firms are cutting back hours on part-timers in times of uncertainty rather than from their full-time workforce, as a measure of cost-cutting and prudence.

Chart 18: Average Weekly Paid Hours Worked Per Employee

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

²⁵ Average weekly paid hours worked/paid overtime hours are based on the last month of each quarter.

²⁶ Actual hours worked refers to the actual time spent by employed persons on work activities, regardless of whether the hours are regular in nature or whether they are paid for. Usual hours worked refers to the hours that an employed person typically works in any given week regardless of whether the person is paid for it. The statistics for all three measures of working time can be found on <https://stats.mom.gov.sg>.

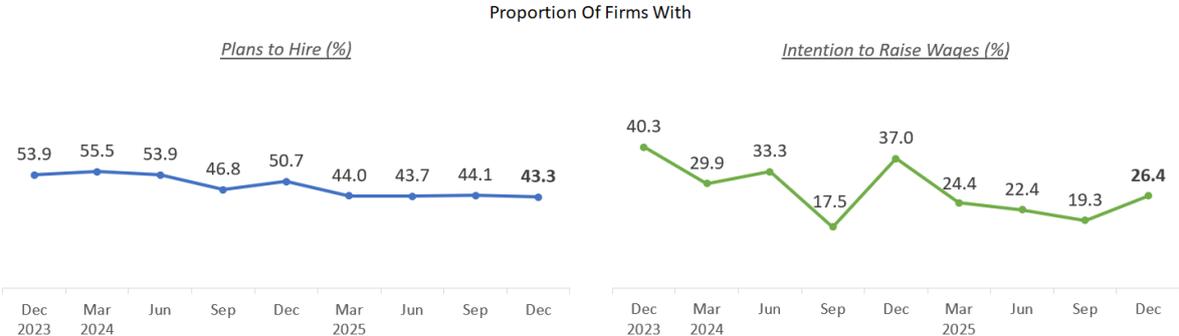

Labour Market Expectations

Firms are expected to remain cautious in their hiring and wage decisions. When polled in December 2025, the proportion of firms expecting to hire or raise wages in the next three months remained modest [Chart 19], though early indications in January 2026 suggest a pick-up in hiring and wage expectations.

Retrenchments are expected to edge up in some outward-oriented sectors but remain within non-recessionary levels.

For the full year 2026, resident employment is expected to grow at a similar or slightly slower pace than in 2025, given Singapore’s limited scope for further expansion due to its already high labour force participation rate. Non-resident employment growth is likely to continue outpacing resident growth. Unemployment rates are expected to remain low and stable throughout 2026.

Chart 19: Hiring and Wage Expectations for the Next Three Months

Source : Labour Market Survey, Manpower Research & Statistics Department, MOM

* Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management.

- : nil or negligible

Notes :

1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

2) Annual figures are the simple averages of the figures obtained at quarterly intervals.

Explanatory Notes

Employment

Source

Primarily from administrative records. The self-employed component is estimated from the Labour Force Survey.

Coverage

Employment data comprise all persons in employment i.e. employees and the self-employed. However, it excludes men who are serving their 2-year full-time national service liability in the Singapore Armed Forces, Police and Civil Defence Forces.

Data on the number of resident employees are compiled from the Central Provident Fund (CPF) Board's administrative records of active contributors, defined as resident employees who have at least one CPF contribution paid for him/her. A resident employee is a Singapore citizen or Permanent Resident who is employed by an employer under a contract of service or other agreement entered into in Singapore. Every resident employee and his/her employer are required to make monthly contributions to the CPF. The CPF is a compulsory savings scheme that provides workers financial security in old age and helps meet the needs of healthcare, home-ownership, family protection and asset enhancement.

Data on non-residents working in Singapore are compiled from administrative records of non-residents on valid work passes issued by the Ministry of Manpower. Non-residents can work in Singapore only if they have valid work passes issued by the Ministry of Manpower.

The number of self-employed residents is estimated from the Labour Force Survey. The self-employed comprises persons aged 15 years and over who are own account workers, employers or contributing family workers.

Concepts and Definitions

Employment change refers to the change in the number of persons who are in employment, derived by taking the difference in the employment level (i.e. number of employed persons) at the end of the reference period compared with the end of the preceding period. A positive change refers to the additional number of persons who are in employment, while a negative change refers to the decline in number of persons in employment.

Uses and Limitations

Analysis of employment change over time helps in understanding the impact of cyclical and structural changes in the economy on the demand for workers. In particular, the breakdown of employment by industry helps identify sectors where employment is growing or falling.

Conceptually, the change in employment over the reference period is the difference between people entering and exiting employment during the period. Users should not mistake an increase in employment as gross job creation i.e. the increase in employment in expanding establishments only.

From 2Q 2024 onwards, changes in the self-employment level will be estimated from data obtained from the Monthly Labour Force Surveys.

Unemployment

Source

Labour Force Survey

Coverage

The survey covers private households in Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore. Estimates of the total labour force are derived by combining data on residents obtained from the survey with non-resident employment data compiled from administrative records.¹

Concepts and Definitions

Unemployed persons refer to persons aged 15 years and over who did not work but were actively looking and available for work during the reference period. They include persons who were not working but were taking steps to start their own business or taking up a new job after the reference period.

Unemployment rate is defined as the percentage of unemployed persons to the labour force (i.e. employed and unemployed persons) aged 15 years and over.

Long-term unemployed persons refer to persons aged 15 years and over who have been unemployed for 25 weeks or more.

Long-term unemployment rate is defined as the percentage of long-term unemployed persons to the labour force.

Uses and Limitations

The unemployment rate is probably the best-known measure of the labour market. It measures unutilised labour supply and is useful in the study of the economic cycle as it is closely related to economic fluctuations.

Unemployment can have frictional, cyclical and structural elements. As it takes time for job seekers and employers to find a match, there is always a certain level of frictional unemployment due to people changing jobs and from new entrants looking for work for the first time. Unemployment can also be structural e.g. arising from a mismatch between the job seekers and the job openings available. With structural unemployment, even if job vacancies and job seekers coexist in the labour market, they may not be matched over a long period of time. Finally, unemployment can be cyclical. This occurs when there is a general decline in demand for manpower as aggregate demand for goods and services falls in the event of a cyclical downturn. Unlike structural and frictional unemployment where the problem is in matching job openings with job seekers, cyclical unemployment occurs when there are not enough jobs to go around.

Unemployment can vary due to changes in demand or supply of manpower. It can decline if more people succeed in securing employment or when the unemployed persons stop looking for a job and leave the labour force either temporarily (e.g. to take up training) or permanently (e.g. to retire). Conversely, unemployment may rise due to increase in labour supply from new entrants or re-entrants to the labour market. It will also rise if more people quit their jobs to look for alternative employment or if there is an increase in layoffs.

¹ Population figures for each quarter will be finalised in the next quarter. Unemployment data are therefore subject to the latest available population estimates.

Unemployment rates by specific groups, defined e.g. by age and educational attainment are useful in identifying groups of workers most vulnerable to unemployment.

Release Schedule

From July 2020, top-line unemployment rates for overall, residents, and citizens for the month will be released on a monthly basis by the first week of the month after next. This availability of top-line unemployment rates on a monthly basis will enable us to detect shifts in the employment situation in a more timely manner. The information will be made available on the Ministry of Manpower's statistical portal <https://stats.mom.gov.sg>.

Additional breakdown on unemployment by profile e.g. age, education, will continue to be made available in the Labour Market Reports released at the end of every quarter. This is because variations in the profile of the unemployed are unlikely in the short term.

Data Quality

To ensure data quality, the Department analyses each survey response to identify and resolve inconsistencies that may suggest an inaccurate response. A response rate of at least 85% is achieved for the monthly labour force survey so as to ensure the sample retains its representativeness.

Seasonal Adjustment

The unemployment time series are influenced by seasonality – periodic fluctuations due to recurring calendar-related events such as holidays, and the beginning and end of school terms. Seasonal adjustment removes the influences of these fluctuations and allows users to derive a more meaningful analysis of the trends in a data series, especially for those with strong seasonal patterns.

The seasonally adjusted figures are derived using X-12 ARIMA program which removes seasonal influences in the data series. To ensure a more accurate reflection of seasonally adjusted figures, concurrent seasonal adjustment is also being done and the latest information available will be incorporated.

Revisions

In order to present timely data at the highest frequency, the monthly unemployment figures are subjected to revisions when the latest population figure becomes available or when the seasonal factors are updated with the latest data.

Retrenchment

Source

Labour Market Survey

Coverage

Before 2006, the survey covered private sector establishments each with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Retrenchment refers to

- i) termination of permanent employees due to redundancy; and
- ii) early termination of term contract employees due to redundancy.

In the public sector, it includes those who left service under the Special Resignation Scheme².

Uses and Limitations

Data on retrenchment are useful in the analysis of re-structuring or ailing industries.

The number of retrenched persons (flow) should not be confused with persons unemployed (stock). Not all retrenched persons will be unemployed as some will re-enter into employment or decide to leave the labour force. If the persons have not found a new job and are actively looking and available for work, they join the pool of unemployed.

Re-entry into Employment

Source

Labour Market Survey and derived based on data from administrative records

Coverage

Information on retrenched resident workers is obtained from the Labour Market Survey. Before 2007, data pertained to residents retrenched from private sector establishments each with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector. With effect from the first quarter of 2010, the coverage is further expanded to include employees on term contracts who were terminated prematurely due to redundancy. The status of re-entry into employment of these workers is tracked using administrative records. Hence, it does not capture retrenched workers who went into self or informal employment or underwent training while looking for a job.

Concepts and Definitions

Re-entry rate is defined as the proportion of retrenched residents who re-entered employment.

6-month re-entry rate

Quarterly 6-month re-entry rate measures the proportion of residents who are in employment in the reference quarter, six months after retrenchment. For example, the re-entry rate for the fourth quarter of 2025 shows the proportion of residents retrenched in the second quarter of 2025 who had re-entered employment six months after retrenchment.

Annual 6-month re-entry rate measures the proportion of residents who are in employment in the reference year, six months after retrenchment. For example, the 2025 re-entry rate pertains to residents retrenched from 3Q 2024 to 2Q 2025, who had re-entered employment by 2025 (six months after retrenchment).

² The Special Resignation Scheme (introduced in April 1988) allows redundant non-deployable Civil Service or Statutory Board employees to leave their organisations with compensation.

12-month re-entry rate

Quarterly 12-month re-entry rate measures the proportion of residents who are in employment in the reference quarter, twelve months after retrenchment. For example, the re-entry rate for the fourth quarter of 2025 shows the proportion of residents retrenched in the fourth quarter of 2024 who had re-entered employment twelve months after retrenchment.

Annual 12-month re-entry rate measures the proportion of residents who are in employment in the reference year, twelve months after retrenchment. For example, the 2025 re-entry rate pertains to residents retrenched from 1Q 2024 to 4Q 2024, who had re-entered employment by 2025 (twelve months after retrenchment).

Residents refer to Singapore Citizens and Permanent Residents.

Uses and Limitations

This indicator measures the prospects of re-entry into employment of retrenched workers. It allows us to identify vulnerable workers who find it difficult to secure re-entry into employment after layoff.

A low re-entry rate could also be the result of workers taking a break from the labour force rather than a weak job market. An analysis of the change in re-entry rate over time should therefore be made in the context of other indicators on the labour market. Also, the indicator could be cohort-specific. Even if the state of the labour market is unchanged, two different cohorts of workers could yield different re-entry rates, depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or underwent training while looking for a job.

Job Vacancy**Source**

Labour Market Survey

Coverage

Before 2006, the survey covered private sector establishments each with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Job vacancy refers to the number of unfilled posts which an establishment is actively recruiting employees from outside the establishment. They exclude:

- a) Positions for which the employees have been appointed, but have not yet commenced duty;
- b) Positions open only to internal transfers or promotions.

Recruitment action to fill a post includes advertising in newspapers, posting notices on the internet (e.g. on online job banks), making word-of-mouth announcements, soliciting employees through employment agencies or job fairs, contacting or interviewing job applicants.

Job vacancy rate for a quarter is defined as the number of job vacancies divided by the demand for manpower at the end of the quarter. The demand for manpower is defined as the sum of the number of employees and job vacancies at the end of the quarter. The annual figures are the simple averages of the quarterly figures.

Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total number of job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy is estimated based on the assumption that private sector establishments each with less than 25 employees have the same vacancy rate as private sector establishments each with 25-49 employees. Estimates on the total number of unemployed persons are obtained from the Labour Force Survey.

Uses and Limitations

Job vacancy statistics measure unmet demand for manpower and are useful for assessing changes in the manpower demand over time. They enable users to identify industries and occupations where employers are seeking workers. This can have operational use e.g. in improving vocational guidance and helping job seekers and employers make more informed choices.

Data on job vacancies can assist in pinpointing emerging labour shortages. To identify labour shortages, trends in vacancy data would have to be evaluated together with other labour market indicators as well as background information on the occupations and factors affecting demand and supply of workers. This is because persistent job vacancies may indicate either real shortages or factors such as low wages, poor working conditions and unrealistic hiring specifications.

Labour Turnover

Source

Labour Market Survey

Coverage

Before 2006, the survey covered private sector establishments each with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Average monthly recruitment rate during a quarter is defined as the average number of persons recruited in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Average monthly resignation rate during a quarter is defined as the average number of persons who resigned in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Uses and Limitations

In good times when job openings are plentiful, recruitment and resignation rates tend to be high reflecting movement of workers between jobs. In periods of economic downturn, high layoffs are usually coupled with low resignation and recruitment rates.

The resignation rates by industry are valuable to employers for comparing their staff turnover against the industry norm. Low resignation rate in a company relative to the industry average is usually considered to be an indicator of good labour-management relations. Labour turnover also reflects the unique labour market dynamics of the various industries. For example, accommodation and food services typically have higher turnover rates because of their heavy reliance on temporary and part-time workers to cope with seasonal fluctuations in demand.

Paid Hours Worked

Source

Labour Market Survey

Coverage

Before 2006, the survey covered private sector establishments each with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Total paid hours worked refers to the total number of paid hours worked during a week by an employee. It is the sum of standard hours and paid overtime hours worked.

Standard hours worked refers to the number of hours, excluding meal breaks worked by an employee during a normal working week.

Paid overtime hours worked refers to the number of hours worked by an employee during a week in excess of the standard hours for which the employees were paid. It excludes overtime hours worked for which "time-off" was granted instead of wage payment.

Uses and Limitations

Data on paid total and overtime hours worked are used as a gauge of the level of economic activities and working conditions of the various industries. The data can also be used for social studies on family and community life.

Management staff and executives are normally not paid additional hourly wages for working overtime. For this group of staff, users can refer to statistics on usual hours worked from the mid-year Comprehensive Labour Force Survey.

Reliability of Data

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the extent of variation between the estimated value obtained from a sample and the true value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

A common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the true value. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of selected indicators are as follows:

	Reference Period	Estimate	Standard Error	Relative Standard Error (%)	95% Confidence Interval	
					Lower	Upper
UNEMPLOYMENT						
Number of Unemployed Residents	Dec 25	62,500	2,500	3.9%	57,700	67,300
Resident Unemployment Rate	Dec 25	2.6	0.10%-pt	3.9%	2.4%	2.8%
JOB VACANCY						
Job Vacancy Number	Dec 25	75,700	1,600	2.1%	72,500	78,800
Job Vacancy Rate	Dec 25	3.0%	0.06%-pt	2.0%	2.9%	3.1%
LABOUR TURNOVER						
Average Monthly Recruitment Rate	4Q 25	1.9%	0.03%-pt	1.7%	1.9%	2.0%
Average Monthly Resignation Rate	4Q 25	1.2%	0.01%-pt	1.2%	1.2%	1.2%
HOURS WORKED						
Average Weekly Paid Overtime Hours Worked Per Employee	Dec 25	1.8	0.03	1.6%	1.8	1.9

Note: Data are non-seasonally adjusted.

FEEDBACK FORM

TITLE OF REPORT: LABOUR MARKET REPORT FOURTH QUARTER 2025

1. How would you rate this publication in terms of :

	Excellent	Good	Average	Poor
a) Relevance to your work	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
b) Providing useful insights on prevailing labour market trends/development	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
c) Ease of understanding	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

2. Which area(s) of the report do you find most useful? Please provide reasons.

3. How do you find the length of the report?

Too detailed Just right Too brief

4. Overall, how would you rate this publication?

	Excellent	Good	Average	Poor
	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

5. What additional information (if any) would you like us to include in our future issues?

6. Any other comments or suggestions you wish to bring to our attention?

Thank you for your valuable feedback
