MISSION

To provide timely and reliable national statistical information on the labour market to facilitate informed decision-making within the government and community-at-large

Statistical activities conducted by the Manpower Research and Statistics Department (MRSD) are governed by the provisions of the Statistics Act (Chapter 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department.

Statistics compiled and disseminated by the MRSD adhere to international standards on official statistics set by the International Labour Organisation and International Monetary Fund.

Labour Market

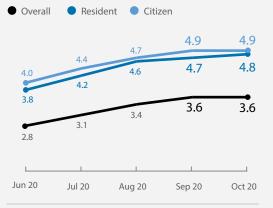

Report Third Quarter

2020

Unemployment

Unemployment rates rose, but the pace of increase has slowed

Unemployment rate (%), seasonally adjusted

Resident long-term unemployment rate edged up

Resident long-term unemployment rate (%), seasonally adjusted

Short Work-Week Or Temporary Layoff

Number of employees placed on short work-week or temporary layoff fell

81,720 2Q 2020

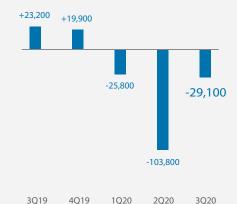

Employment

Total employment contracted due to fall in non-resident employment, while resident employment rebounded strongly

Employment change (Quarterly)

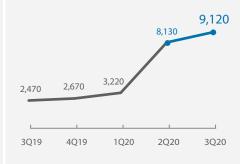

Employment level (excl. FDW)

Retrenchment

Retrenchments rose

Retrenched employees

Re-entry into Employment

Rate of re-entry into employment declined slightly

Resident rate of re-entry into employment (6 months post-retrenchment) (%)

Job Vacancy

Job vacancies rose for the first time in 2020, boosting the ratio of job vacancies to unemployed persons

Ratio of job vacancies to unemployed persons, seasonally adjusted

Labour Turnover

Labour turnover increased

Average monthly recruitment and resignation rates (%), seasonally adjusted

Labour Market Report Third Quarter 2020

Executive Summary

In the Labour Market Advance Release for 3Q 2020, we observed that Singapore's labour market showed some signs of improvement based on preliminary estimates on employment, unemployment and retrenchment. In this release, the preliminary estimates have been updated with final data, and trends are similar to our earlier assessment:

Employment

- Non-residents made up almost nine in ten (-139,100¹) of the contraction in total employment between January and September this year (-158,700). This reflected the strong rebound in resident employment in 3Q 2020 (+43,200), which offset most of the declines which took place in the first two quarters of the year. The resident employment level in September 2020 (2.34 million) is now back to near pre COVID-19 levels. On the other hand, the contraction in non-resident employment continued in 3Q 2020 (-72,300), at a faster pace than the previous two quarters.
- The Employment Diffusion Index (EDI) for residents rose to 64.0 in 3Q 2020, indicating that increases in resident employment were observed in more industries in 3Q 2020 compared to 2Q 2020. For non-residents, the EDI declined further to 8.4, with most industries experiencing a decline in non-resident employment.

<u>Unemployment</u>

- The pace of increase in unemployment rates has slowed markedly in September and October 2020, compared to earlier months.

Retrenchments

Retrenchments rose in 3Q 2020 (9,120) compared to 2Q 2020 (8,130). This was due to Arts,
 Entertainment & Recreation and Air Transport related industries. On the other hand,
 retrenchments declined in other sectors such as Financial Services, Wholesale Trade and Food
 & Beverage Services.

¹ Employment figures exclude foreign domestic workers (FDW).

To provide a comprehensive view of the labour market situation in 3Q 2020, this report also covers additional indicators. These indicators affirmed that the labour market improved in 3Q 2020, reflecting the phased re-opening of the economy.

Working Arrangements

- As employees returned to work, significantly fewer employees were placed on short work-week or temporary layoff (34,240) compared to 2Q 2020 (81,720).

Hours worked

- Average weekly paid hours worked rose by 0.4 hour to 43.8 hours, due to higher overtime hours.

Job Vacancies

- The number of job vacancies rose for the first time in 2020. As a result, the job vacancies to unemployed persons ratio rose from 0.57 in June 2020 to 0.60 in September 2020 (seasonally adjusted).

Labour turnover

The recruitment and resignation rates rose in 3Q 2020 (1.6%, seasonally adjusted) from the all-time lows in 2Q 2020, in line with the gradual resumption in hiring and voluntary job change as labour market activity picked up.

However, the rise in resident long-term unemployment rate in September 2020 bears close monitoring. At this moment, the rate could have crept up because of labour market slack.

Employment

Resident² employment rebounded strongly in 3Q 2020 (+43,200) to 2.34 million in September 2020, which is just 0.4% lower than the 2.35 million in September 2019. However, non-resident employment continued to contract (-72,300 excluding FDW), more sharply than in the first two quarters of the year. As a result, total employment contracted in 3Q 2020 (-29,100, excluding FDW), but at a significantly slower pace than in 2Q 2020 (-103,800).

In the first three quarters of this year, nearly nine in ten of the total employment declines (-158,700) were due to non-residents (-139,100). Resident employment declined by a significantly smaller number (-19,600), as the increase in 3Q 2020 helped to offset most of the declines in the first two quarters of the year. This reflects the strong support measures for residents, including the Jobs Support Scheme and programmes under the SGUnited Jobs and Skills Package.

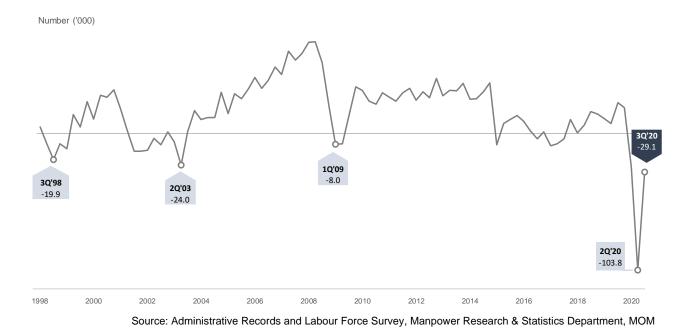

Chart 1: Quarterly Total Employment Change (excluding FDW)

Notes:

(1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.

(3) 'excl FDW' refers to excluding foreign domestic workers.

(4) 2019 and 2020 data are revised to reflect updates in pre-approved Letter of Consent (PLOC) numbers.

3

⁽²⁾ Employment change is the difference in the employment level at the end of the reference period compared with the end of the preceding period.

² "Residents" refer to Singapore Citizens and Permanent Residents.

In 3Q 2020, the Employment Diffusion index³ (EDI) for residents rose to 64.0, indicating that the increase in resident employment was spread more broadly across industries. The EDI declined for non-residents to 8.4, indicating that the non-resident employment contractions were also more widespread across industries. The further away the EDI is from the mid-point, i.e. 50, the more widespread these expansions or contractions are.

The industries which registered the largest increase in total employment in 3Q 2020 were *Public Administration & Education* (6,300), *Food & Beverage Services* (5,700, reversing two consecutive quarters of decline), *Health & Social Services* (3,600) and *Information & Communications* (1,900). In these industries, resident employment grew strongly, while non-resident employment declined.

During the same period, the sectors with sharper declines in total employment were *Construction* (-16,700), *Manufacturing* (-15,000), *Arts, Entertainment & Recreation* (-4,400), *Transportation & Storage* (-3,400) and *Administrative & Support Services* (-3,000). The contraction in these industries were a result of declines in non-resident employment, with the exception of *Arts, Entertainment & Recreation* where both resident and non-resident employment contracted.

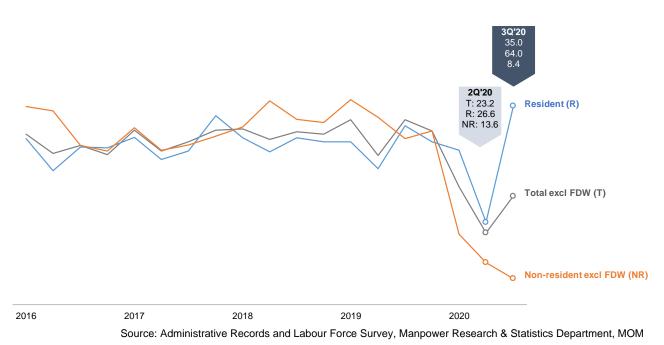

Chart 2: Employment Diffusion Index

Notes:

(1) 'excl FDW' refers to excluding foreign domestic workers.

(2) 2019 and 2020 data are revised to reflect updates in pre-approved Letter of Consent (PLOC) numbers.

³ The EDI provides an indication of the breadth of employment change across 203 component industries, and ranges from 0 to 100. The further away this index is from the mid-point of "50" (either above or below), the more widespread these employment expansions and contractions.

Unemployment

Although the seasonally adjusted unemployment rates continued to rise in September 2020 (overall: 3.6%; resident: 4.7%; citizen: 4.9%),^{4,5} the pace of increase has slowed markedly from before.⁶ Residents in their 40s and 50s, and residents with secondary and below education saw relatively larger increases in their unemployment rates compared to other age and education groups.

In October 2020, the unemployment rates were largely similar to September 2020. It was unchanged at the overall level and for citizens, and inched up by 0.1%-point for residents.⁷

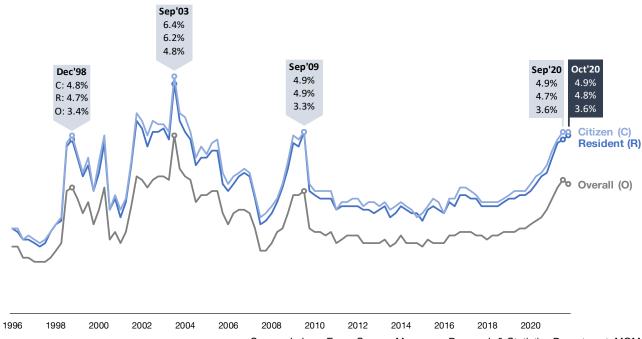

Chart 3: Unemployment Rate (Seasonally Adjusted)

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

⁴ Based on seasonally adjusted data, there were 112,500 unemployed residents in September 2020, of which 97,700 were citizens.

⁵ With the resumption of business activities in 3Q 2020, the share of part-timers among employed residents has also risen over the quarter. With the increase in part-time employment, the resident time-related under-employment rate also rose.

⁶ The resident unemployment rate rose by 0.1%-point in September 2020, lower than the monthly increase of 0.4%-point for July and August respectively. A similar moderation in increase was observed for the overall and citizen unemployment rates.

⁷ Based on seasonally adjusted data, there were 115,400 unemployed residents in October 2020, of which 99,700 were citizens.

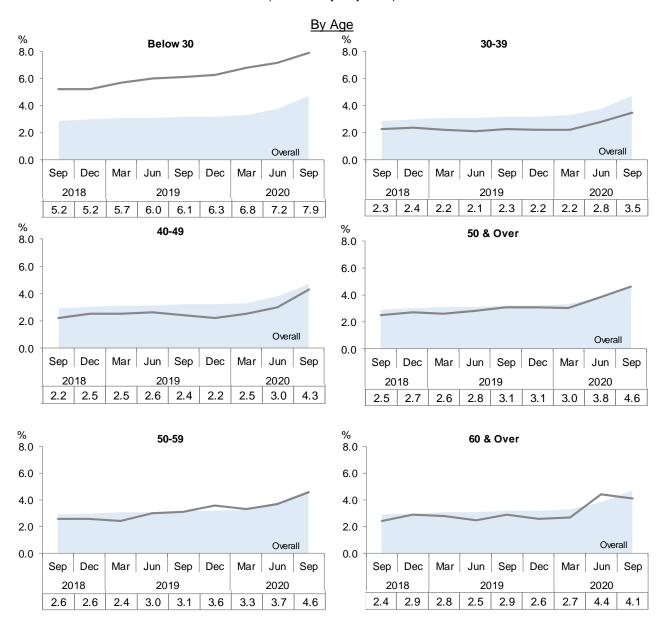

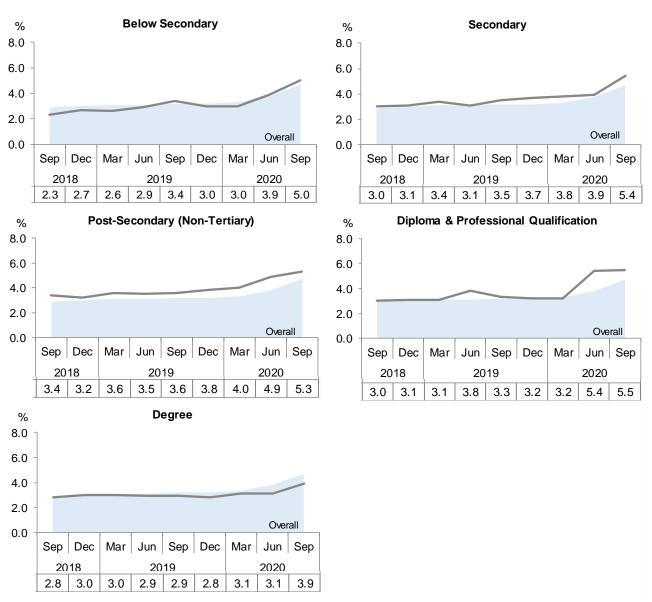

Chart 4: Resident Unemployment Rate By Age And Education (Seasonally Adjusted)

By Education

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

The resident long-term unemployment rate⁸ (LTUR) rose in September 2020 (0.9%, seasonally adjusted) after dipping in June (0.8%).⁹ Most age and education groups registered an increase in their LTUR. For residents with diploma & professional qualifications, their LTUR rose for the third consecutive quarter.

Jun'20 0.9% 2010 2012 2014 2016 2018 2020

Chart 5: Resident Long-Term Unemployment Rate (Seasonally Adjusted)

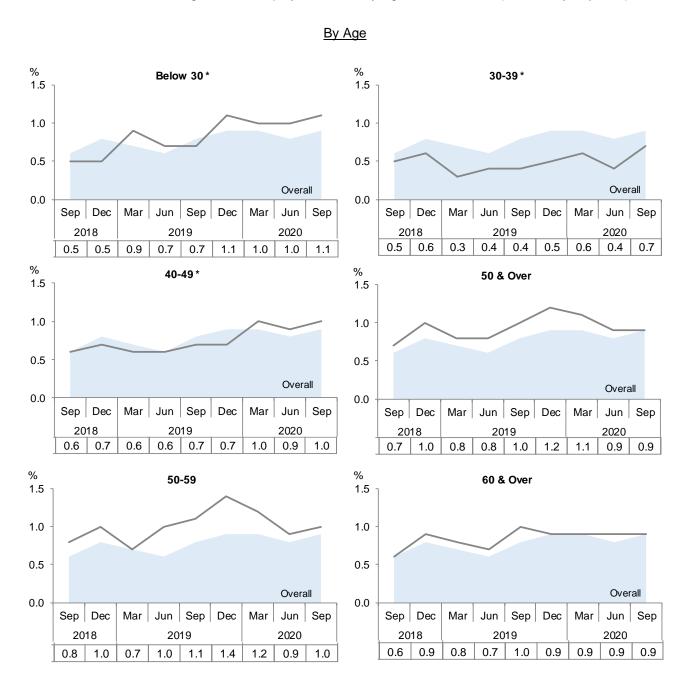

8

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

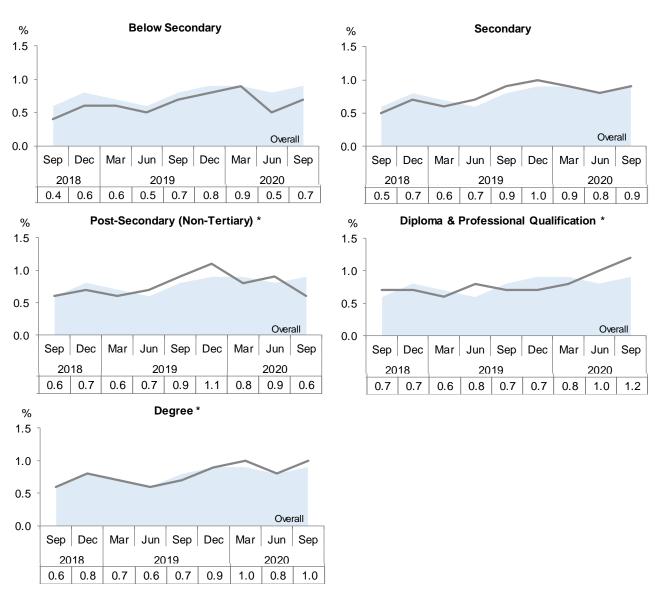

⁸ The long-term unemployment rate is the percentage of long-term unemployed persons (i.e. those unemployed for at least 25 weeks) to the labour force.

⁹ Based on seasonally adjusted data, there were more long-term unemployed residents in September 2020 (22,000) compared to June 2020 (18,600).

Chart 6: Resident Long-Term Unemployment Rate By Age And Education (Seasonally Adjusted)

By Education

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

- (1) Long-term unemployed refers to those unemployed for at least 25 weeks.
- (2) * These series are not seasonally adjusted because they have weak or no seasonality.

Retrenchment

The number of retrenchments rose in 3Q 2020 (9,120) compared to 2Q 2020 (8,130). This was due to higher retrenchments in *Arts, Entertainment & Recreation* and *Air Transport* related industries. However, retrenchments declined in other sectors such as *Financial Services*, *Wholesale Trade* and *Food & Beverage Services*.

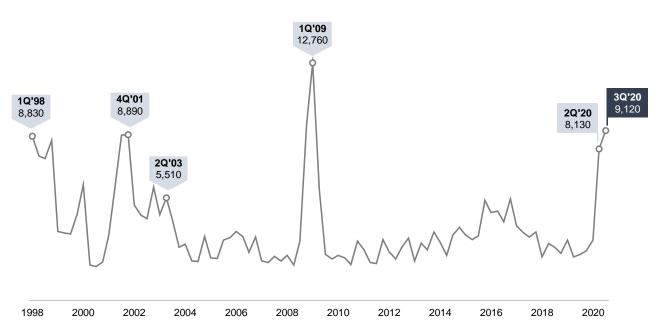

Chart 7: Retrenchments

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Notes:

(1) Data on the number of retrenchments are rounded to the nearest 10.

(2) Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

11

¹⁰ In the manufacture of aircraft and related machinery, and air transport & supporting services.

Among resident employees, the incidence of retrenchments among PMETs rose (from 2.7 to 3.7 retrenched per 1,000 PMET employees), while that for non-PMETs (4.3 retrenched per 1,000 non-PMET employees) held steady over the quarter. The increase in incidence of PMET retrenchments over the quarter was due to a change in the composition of retrenching establishments. On the whole, PMETs remained less susceptible to retrenchments compared to non-PMETs.

Per 1,000 Resident Employees 2Q 20 3Q 20 0.0 2.0 4.0 6.0 **Occupational Group** Prof, Mgrs, Execs & Tech (PMETs) 2.7 3.7 Non-PMETs 4.3 4.3 Clerical, Sales, & Service Workers 5.4 4.5 Prod & Tpt Op, Cleaners & Labourers 4.0 2.7 Age Group Below 30 2.4 2.7 2.9 3.7 30-39 40-49 3.6 4.1 50-59 4.2 5.0 60 & Over 3.7 3.6 Gender Males 3.2 3.9 **Females** 3.4 3.8 2Q 20 3Q 20

Chart 8: Incidence Of Retrenchment Among Residents By Occupation, Age And Gender

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Note: Data on retrenched residents pertain to those retrenched from private sector establishments (each with at least 25 employees) and the public sector.

Short Work-Week Or Temporary Layoff

As business activities resumed and employees returned to work, significantly fewer workers were placed on short work-week or temporary layoff. There were 34,240 employees placed on short work-week or temporary layoff, more than halved from 2Q 2020 (81,720). The bulk of the decline (-47,480) came from a reduction in employees on temporary layoff (-32,670). As a result, more of the affected employees in 3Q 2020 were on short work-week (23,780) than on temporary layoff (10,460).

The decline in short-work or temporary layoff was more prominent in *Manufacturing, Construction* and *Food & Beverage Services*, sectors which previously saw larger increases. It also fell more among non-PMETs, although they still formed the majority (65%) of all employees placed on short work-week or temporary layoff in 3Q 2020.

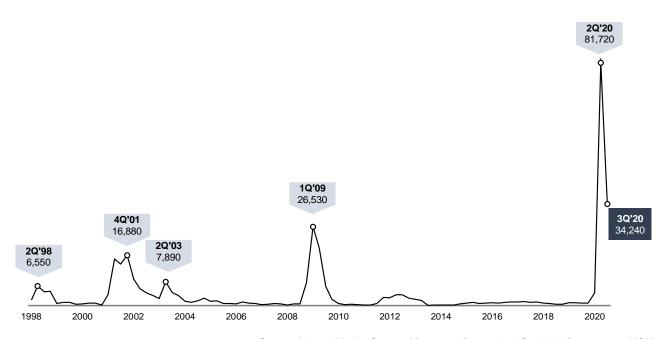

Chart 9: Number Of Employees On Short Work-week Or Temporary Layoff

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

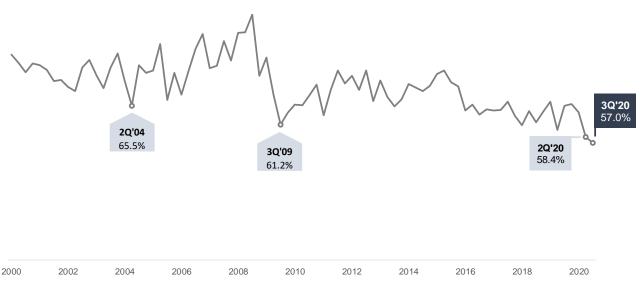

- (1) Data are rounded to the nearest 10.
- (2) Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Re-entry Into Employment

The six-month re-entry rate among retrenched residents continued to decline in 3Q 2020 (57%) compared to 2Q 2020 (58%), but the pace of decline has slowed.

By occupation, the re-entry rate held steady for PMETs. However, it continued to fall among non-PMETs due to their higher share of employment in sectors most affected by COVID-19.

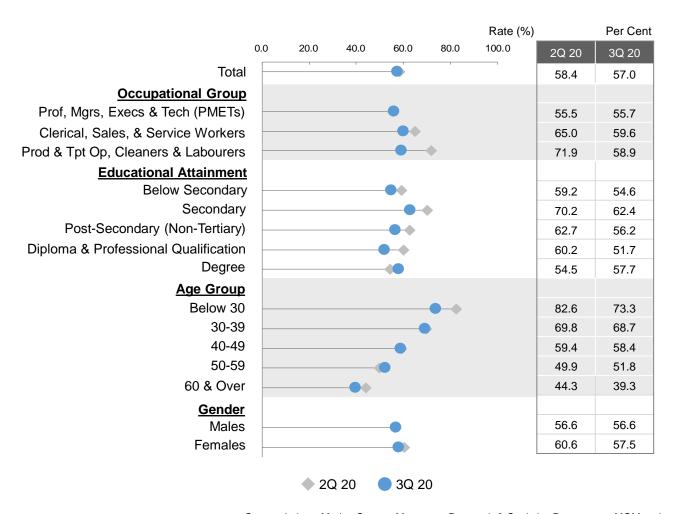

Chart 10: Quarterly Rate Of Re-entry Into Employment Of Retrenched Residents (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

- (1) Data refer to re-entry rates for residents retrenched 6 months ago by private sector establishments (each with at least 25 employees) and the public sector. For example, the re-entry rate for 3Q 2020 refers to residents retrenched in 1Q 2020.
- (2) Data on re-entry into employment are cohort-specific. Two different cohorts of workers laid off could yield different re-entry rates depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or underwent training while looking for a job.
- (3) Before 2007, data pertain to residents retrenched from private establishments with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector comprising government ministries, organs of state and statutory boards.
- (4) Before 2010, data pertain to employees who were retrenched from permanent positions. From 2010 onwards, data also include fixed-term contract employees who were retrenched.

Chart 11: Quarterly Rate Of Re-entry Into Employment Of Retrenched Residents (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Note: Data refer to re-entry rates in 2Q / 3Q 2020 for residents retrenched in 4Q 2019/ 1Q 2020 by private sector establishments (each with at least 25 employees) and the public sector and re-entered employment, 6 months post-retrenchment.

Job Vacancy

The number of job vacancies rose for the first time in 2020. There were 49,600 job vacancies in September 2020 (seasonally adjusted), up from the decade low of 42,400 in June 2020. As a result, the ratio of job vacancies to unemployed persons rose over the quarter from 0.57 in June 2020 to 0.60 in September 2020.

There was an increase in PMET positions in *Information & Communications*, *Professional Services*, *Health & Social Services*, amongst others, and for non-PMET positions in sectors such as *Construction*, *Administrative & Support Services*¹¹ and *Manufacturing*.

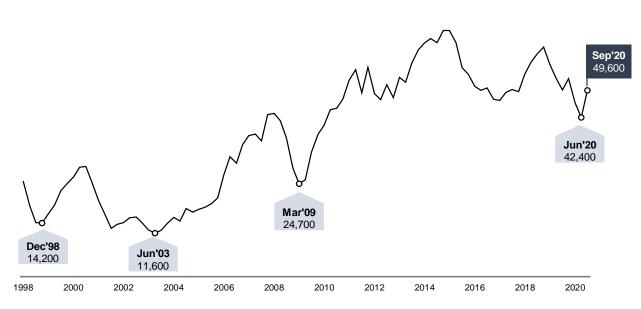

Chart 12: Job Vacancy (Seasonally Adjusted)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

-

¹¹ The increase in non-PMET vacancies was mainly in Security & Investigation and Cleaning & Landscaping.

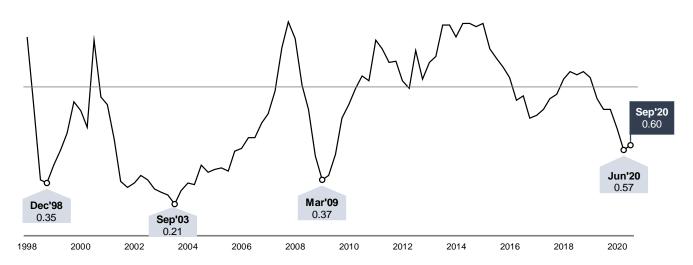

Chart 13: Ratio Of Job Vacancies To Unemployed Persons (Seasonally Adjusted)

Source: Labour Market Survey and Labour Force Survey, Manpower Research & Statistics Department, MOM

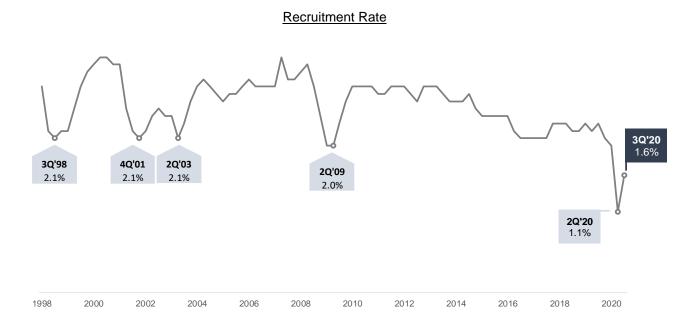

Note: Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy are estimated assuming that private sector establishments with less than 25 employees have the same vacancy rate as those with 25-49 employees.

Labour Turnover

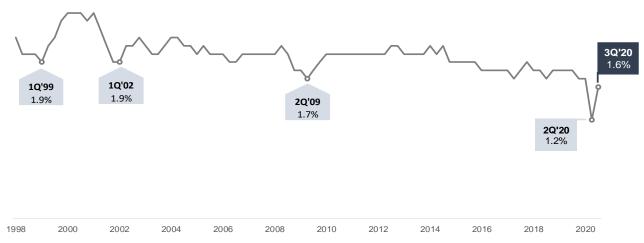

The recruitment and resignation rates rose in 3Q 2020 (1.6%, seasonally adjusted) from the all-time lows in 2Q 2020, in line with the gradual resumption in hiring and voluntary job change as labour market activity picked up. However compared to a year ago, labour turnover remained muted.

The quarterly increase in labour turnover was observed across most industries, except for *Security & Investigation* which saw a decline in resignation rate, likely due to strong manpower demand in the sector.

Chart 14: Average Monthly Recruitment And Resignation Rates (Seasonally Adjusted)

Resignation Rate

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.
- (2) The average monthly resignation/recruitment rate is defined as the average number of persons who resigned / who were recruited in a month divided by the average number of employees in the establishment.

Hours Worked

The average weekly total paid hours worked per employee¹² rose by 0.4 hour to 43.8 hours in September 2020, due to higher overtime hours. The increase over the quarter was led by *Construction*, as overtime hours rose (from 1.3 to 4.3 hours) when work stoppages were lifted. Nevertheless, hours worked across most industries remained below pre-COVID-19 levels.

44.7 44.7 44.4 43.8 43.4 **Total** 2.8 Overtime 2.7 2.4 1.9 1.4 Dec Jun Sep Sep Mar 2019 2020

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

20

¹² Average weekly paid hours worked per employee are based on the last month of each quarter.

COVID-19 Labour Market Dashboard

The labour market improvement was uneven across sectors in 3Q 2020. While business activities have progressively resumed, uncertainties in external economic conditions continued to weigh more heavily in some sectors. This section examines the sectors which saw the most and least recovery in 3Q 2020.

<u>Most Improvement</u> – Sectors where remote work is more likely, or consumer-facing sectors which benefited from the exit from the Circuit Breaker. This includes *Public Administration & Education*, Food & Beverage Services, Health & Social Services, Information & Communications and *Professional Services*, among others.

<u>Mixed Improvement</u> – Construction, which saw an extended period of restrictions, registered continued contraction in total employment. Nonetheless, paid hours worked as well as job vacancies rose with the gradual resumption of work. There was also unevenness in labour market improvement for the outward-oriented *Manufacturing* and *Wholesale Trade*.

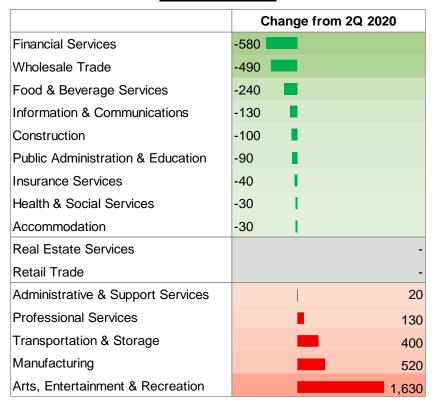

<u>Least Improvement</u> – These were tourism-dependent industries, including *Accommodation*, *Transportation & Storage* and *Arts, Entertainment & Recreation*.

^{*} Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management.

^{-:} nil or negligible

¹⁾ Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.

²⁾ Change in employment is the difference in the employment level at the end of the reference period compared with the end of the preceding period.

^{3) 2019} and 2020 data are revised to reflect updates in pre-approved Letter Of Consent (PLOC) numbers.

⁴⁾ Data may not add up to the total due to rounding.

3.1 RETRENCHMENT

RETRENCHED EMPLOYEES BY INDUSTRY AND OCCUPATIONAL GROUP

Notes:

1) Residents refer to Singapore Citizens and Permanent Residents.

- 2) The quarterly rates show the rates of re-entry into employment in a quarter for residents retrenched six months ago.
- 3) The annual rate refers to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.
- 4) Data refer to the proportion of residents retrenched by private sector establishments (each with at least 25 employees) and the public sector, who re-entered employment six months after they were retrenched.

¹⁾ Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

²⁾ Annual figures are the simple averages of the figures obtained at quarterly intervals.

Explanatory Notes

Unemployment

Source

Labour Force Survey

Coverage

The survey covers private households in Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore. Estimates of the total labour force are derived by combining data on residents obtained from the survey with non-resident employment data compiled from administrative records.¹

Concepts and Definitions

Unemployed persons refer to persons aged 15 years and over who did not work but were actively looking and available for work during the reference period. They include persons who were not working but were taking steps to start their own business or taking up a new job after the reference period.

Unemployment rate is defined as the percentage of unemployed persons to the labour force (i.e. employed and unemployed persons) aged 15 years and over.

Long-term unemployed persons refer to persons aged 15 years and over who have been unemployed for 25 weeks or more.

Long-term unemployment rate is defined as the percentage of long-term unemployed persons to the labour force.

Uses and Limitations

The unemployment rate is probably the best-known measure of the labour market. It measures unutilised labour supply and is useful in the study of the economic cycle as it is closely related to economic fluctuations.

Unemployment can have frictional, cyclical and structural elements. As it takes time for job seekers and employers to find a match, there is always a certain level of frictional unemployment due to people changing jobs and from new entrants looking for work for the first time. Unemployment can also be structural e.g. arising from a mismatch between the job seekers and the job openings available. With structural unemployment, even if job vacancies and job seekers coexist in the labour market, they may not be matched over a long period of time. Finally, unemployment can be cyclical. This occurs when there is a general decline in demand for manpower as aggregate demand for goods and services falls in the event of a cyclical downturn. Unlike structural and frictional unemployment where the problem is in matching job openings with job seekers, cyclical unemployment occurs when there are not enough jobs to go around.

Unemployment can vary due to changes in demand or supply of manpower. It can decline if more people succeed in securing employment or when the unemployed persons stop looking for a job and leave the labour force either temporarily (e.g. to take up training) or permanently (e.g. to retire). Conversely, unemployment may rise due to

¹ Population figures for each quarter will be finalised in the next quarter. Unemployment data are therefore subject to the latest available population estimates.

increase in labour supply from new entrants or re-entrants to the labour market. It will also rise if more people quit their jobs to look for alternative employment or if there is an increase in layoffs.

Unemployment rates by specific groups, defined e.g. by age and educational attainment are useful in identifying groups of workers most vulnerable to unemployment.

Release Schedule

From July, top-line unemployment rates for overall, residents, and citizens for the month will be released on a monthly basis by the end of the next month. This availability of top-line unemployment rates on a monthly basis will enable us to detect shifts in the employment situation in a more timely manner. The information will be made available on the Ministry of Manpower's statistical portal https://stats.mom.gov.sg and in the Jobs Situation Report.

Additional breakdown on unemployment by profile e.g. age, education, will continue to be made available in the Labour Market Reports released at the end of every quarter. This is because variations in the profile of the unemployed are unlikely in the short term.

Data Quality

To ensure data quality, the Department analyses each survey response to identify and resolve inconsistencies that may suggest an inaccurate response. A response rate of at least 85% is achieved for the monthly labour force survey so as to ensure the sample retains its representativeness.

Seasonal Adjustment

The unemployment time series are influenced by seasonality – periodic fluctuations due to recurring calendar-related events such as holidays, and the beginning and end of school terms. Seasonal adjustment removes the influences of these fluctuations and allows users to derive a more meaningful analysis of the trends in a data series, especially for those with strong seasonal patterns.

The seasonally adjusted figures are derived using X-12 ARIMA program which removes seasonal influences in the data series. To ensure a more accurate reflection of seasonally adjusted figures, concurrent seasonal adjustment is also being done and the latest information available will be incorporated.

Revisions

In order to present timely data at the highest frequency, the monthly unemployment figures are subjected to revisions when the latest population figure becomes available or when the seasonal factors are updated with the latest data.

Employment

Source

Primarily from administrative records. The self-employed component is estimated from the Labour Force Survey.

Coverage

Employment data comprise all persons in employment i.e. employees and the self-employed. However, it excludes men who are serving their 2-year full-time national service liability in the Singapore Armed Forces, Police and Civil Defence Forces.

Data on the number of resident employees are compiled from the Central Provident Fund (CPF) Board's administrative records of active contributors, defined as resident employees who have at least one CPF contribution paid for him/her. A resident employee is a Singapore citizen or Permanent Resident who is employed by an employer under a contract of service or other agreement entered into in Singapore. Every resident employee and his/her employer are required to make monthly contributions to the CPF. The CPF is a compulsory savings scheme that provides workers financial security in old age and helps meet the needs of healthcare, home-ownership, family protection and asset enhancement.

Data on non-residents working in Singapore are compiled from administrative records of non-residents on valid work passes issued by the Ministry of Manpower. Non-residents can work in Singapore only if they have valid work passes issued by the Ministry of Manpower.

The number of self-employed residents is estimated from the Labour Force Survey. The self-employed comprises persons aged 15 years and over who are own account workers, employers or contributing family workers.

Concepts and Definitions

Employment change refers to the change in the number of persons who are in employment, derived by taking the difference in the employment level (i.e. number of employed persons) at the end of the reference period compared with the end of the preceding period. A positive change refers to the additional number of persons who are in employment, while a negative change refers to the decline in number of persons in employment.

Uses and Limitations

Analysis of employment change over time helps in understanding the impact of cyclical and structural changes in the economy on the demand for workers. In particular, the breakdown of employment by industry helps identify sectors where employment is growing or falling.

Conceptually, the change in employment over the reference period is the difference between people entering and exiting employment during the period. Users should not mistake an increase in employment as gross job creation i.e. the increase in employment in expanding establishments only.

Retrenchment

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Retrenchment refers to

- i) termination of permanent employees due to redundancy; and
- ii) early termination of term contract employees due to redundancy.

In the public sector, it includes those who left service under the Special Resignation Scheme².

Uses and Limitations

Data on retrenchment are useful in the analysis of re-structuring or ailing industries.

The number of retrenched persons (flow) should not be confused with persons unemployed (stock). Not all retrenched persons will be unemployed as some will re-enter into employment or decide to leave the labour force. If the persons have not found a new job and are actively looking and available for work, they join the pool of unemployed.

Re-entry into Employment

Source

Labour Market Survey and derived based on data from administrative records

Coverage

Information on retrenched resident workers is obtained from the Labour Market Survey. Before 2007, data pertain to residents retrenched from private sector establishments with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector. With effect from the first quarter of 2010, the coverage is further expanded to include employees on term contracts which were terminated prematurely due to redundancy. The status of re-entry into employment of these workers is tracked using administrative records. Hence, it does not capture retrenched workers who went into self or informal employment or underwent training while looking for a job.

Concepts and Definitions

Re-entry rate is defined as the proportion of retrenched residents who re-entered employment. The re-entry rate (6 months post-retrenchment) refers to the re-entry rate in a quarter for the residents retrenched six months ago. For example, the re-entry rate for the first quarter 2019 shows the proportion of residents retrenched in the third quarter of 2018 who had re-entered employment six months after they were retrenched. The annual rates refer to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment. For example, the 2019 re-entry rate pertains to residents retrenched from 3Q 2018 to 2Q 2019, who re-entered employment by 2019 (given 6 months post-retrenchment).

Uses and Limitations

This indicator measures the prospects of re-entry into employment of retrenched workers. It allows us to identify vulnerable workers who find it difficult to secure re-entry into employment after layoff.

A low re-entry rate could also be the result of workers taking a break from the labour force rather than a weak job market. An analysis of the change in re-entry rate over time should therefore be made in the context of other

² The Special Resignation Scheme (introduced in April 1988) allows redundant non-deployable Civil Service or Statutory Board employees to leave their organisations with compensation.

indicators on the labour market. Also, the indicator could be cohort-specific. Even if the state of the labour market is unchanged, two different cohorts of workers could yield different re-entry rates, depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or underwent training while looking for a job.

Job Vacancy

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Job vacancy refers to the number of unfilled posts which an establishment is actively recruiting employees from outside the establishment. They exclude:

- a) Positions for which the employees have been appointed, but have not yet commenced duty;
- b) Positions open only to internal transfers or promotions.

Recruitment action to fill a post includes advertising in newspapers, posting notices on the internet (e.g. on online job banks), making word-of-mouth announcements, soliciting employees through employment agencies or job fairs, contacting or interviewing job applicants.

Job vacancy rate for a quarter is defined as the number of job vacancies divided by the demand for manpower at the end of the quarter. The demand for manpower is defined as the sum of the number of employees and job vacancies at the end of the quarter. The annual figures are the simple averages of the quarterly figures.

Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total number of job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy is estimated based on the assumption that private sector establishments with less than 25 employees have the same vacancy rate as private establishments with 25-49 employees. Estimates on the total number of unemployed persons are obtained from the Labour Force Survey.

Uses and Limitations

Job vacancy statistics measure unmet demand for manpower and are useful for assessing changes in the manpower demand over time. They enable users to identify industries and occupations where employers are seeking workers. This can have operational use e.g. in improving vocational guidance and helping job seekers and employers make more informed choices.

Data on job vacancies can assist in pinpointing emerging labour shortages. To identify labour shortages, trends in vacancy data would have to be evaluated together with other labour market indicators as well as background information on the occupations and factors affecting demand and supply of workers. This is because persistent job vacancies may indicate either real shortages or factors such as low wages, poor working conditions and unrealistic hiring specifications.

Labour Turnover

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Average monthly recruitment rate during a quarter is defined as the average number of persons recruited in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Average monthly resignation rate during a quarter is defined as the average number of persons who resigned in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Uses and Limitations

In good times when job openings are plentiful, recruitment and resignation rates tend to be high reflecting movement of workers between jobs. In periods of economic downturn, high layoffs are usually coupled with low resignation and recruitment rates.

The resignation rates by industry are valuable to employers for comparing their staff turnover against the industry norm. Low resignation rate in a company relative to the industry average is usually considered to be an indicator of good labour-management relations. Labour turnover also reflects the unique labour market dynamics of the various industries. For example, accommodation and food services typically have higher turnover rates because of their heavy reliance on temporary and part-time workers to cope with seasonal fluctuations in demand.

Paid Hours Worked

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Total paid hours worked refers to the total number of paid hours worked during a week by an employee. It is the sum of standard hours and paid overtime hours worked.

Standard hours worked refers to the number of hours, excluding meal breaks worked by an employee during a normal working week.

Paid overtime hours worked refers to the number of hours worked by an employee during a week in excess of the standard hours for which the employees were paid. It excludes overtime hours worked for which "time-off" was granted instead of wage payment.

Uses and Limitations

Data on paid total and overtime hours worked are used as a gauge of the level of economic activities and working conditions of the various industries. The data can also be used for social studies on family and community life.

Management staff and executives are normally not paid additional hourly wages for working overtime. For this group of staff, users can refer to statistics on usual hours worked from the mid-year Comprehensive Labour Force Survey.

Reliability of Data

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the extent of variation between the estimated value obtained from a sample and the true value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

A common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the true value. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of selected indicators are as follows:

	Reference	F # .	Standard	Relative	95% Confidence Interval		
	Period Estimate Erro		Error	Standard Error (%)	Lower	Upper	
UNEMPLOYMENT							
Number of Unemployed Residents	Sep 20	102,100	2,900	2.8%	96,400	107,700	
Resident Unemployment Rate	Sep 20	4.3%	0.12%-pt	2.8%	4.1%	4.5%	
LABOUR TURNOVER							
Average Monthly Recruitment Rate	3Q 20	1.6%	0.02%-pt	1.2%	1.6%	1.6%	
Average Monthly Resignation Rate	3Q 20	1.6%	0.02%-pt	1.2%	1.5%	1.6%	
HOURS WORKED							
Average Weekly Paid Overtime Hours Worked Per Employee	Sep 20	1.9	0.03	1.4%	1.9	2.0	

Note: Data are non-seasonally adjusted.
