#### **MISSION**

To provide timely and reliable national statistical information on the labour market to facilitate informed decision-making within the government and community-at-large

Statistical activities conducted by the Manpower Research and Statistics Department (MRSD) are governed by the provisions of the Statistics Act (Chapter 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department.

Statistics compiled and disseminated by the MRSD adhere to international standards on official statistics set by the International Labour Organisation and International Monetary Fund.

#### Revisions

Seasonal patterns make it difficult to tell if a quarter-to-quarter change is a true reflection of the underlying trend or merely due to seasonal influences. To remove the seasonal influences, a statistical technique called seasonal adjustment is used to produce seasonally adjusted data. These seasonally adjusted data can then be compared between different periods of the year. Revision on seasonally adjusted data is done once a year, taking into account data for the latest year. The results of the latest annual revision may be found in this report.

Revisions have also been made to include responses from late returns. These revisions did not lead to material changes in trends or findings.

# Labour Market Report 2019 HIGHLIGHTS

#### Based on final data, the labour market held up in 2019:

- Despite economic headwinds, total employment growth in 2019 (57,000) was higher than in 2018 (38,300). Local employment growth continued to track total employment growth closely. The majority of the increase in employment was in community, social & personal services, professional services, financial & insurance services and information & communications.
- Retrenchments stayed low in 2019 (10,690), similar to levels in 2018 (10,730).
- Rate of re-entry into employment among retrenched locals was slightly higher in 2019 (64%) compared to 2018 (63%).
- Unemployment rates rose slightly (overall: 2.3%, resident: 3.1%; citizen: 3.3%), but they remained in the relatively low range of recent years. The resident long-term unemployment rate also held steady at 0.7%.

#### However, in the more recent quarter (fourth quarter of 2019), trends were mixed:

- The pace of employment growth has slowed, growing at a more moderated pace of 18,300, compared to 14,700 in the fourth quarter of 2018, and the third quarter of 2019 (21,700).
- Unemployment rates remained unchanged after inching up in previous quarters, (overall: 2.3%; residents: 3.2%; citizens: 3.3%) but the resident long-term unemployment rate inched up (from 0.8% to 0.9%).
- There were slightly more retrenchments than the third quarter of 2019 (from 2,470 to 2,670). But the re-entry rate improved to 66%.
- The job vacancies to unemployed persons ratio held steady at 0.84, after trending down in previous quarters.

#### Overview

The labour market held up in 2019. Despite economic headwinds, employment growth was higher. Retrenchments stayed low, and the re-entry rate into employment among retrenched residents rose slightly. Unemployment rates edged up, but they remained in the relatively low range of recent years. As hiring sentiments turned cautious, vacancies trended lower.

However, trends were mixed in the more recent quarter (fourth quarter of 2019). The pace of employment growth has slowed. Unemployment rates remained unchanged after inching up in previous quarters, but the resident long-term unemployment rate crept up. Retrenchments were slightly higher in the fourth quarter of 2019, while the re-entry rate improved over the quarter.

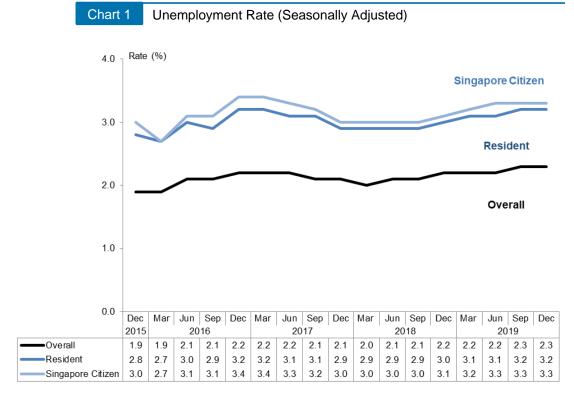

#### Unemployment

Unemployment rates held steady in December 2019

Quarter-on-quarter, the seasonally adjusted unemployment rates held steady in December 2019 (overall: 2.3%; residents: 3.2%; citizens: 3.3%), after edging up in previous quarters.

73,900 residents, including 63,500 citizens, were unemployed in December 2019. This was similar to the levels in September 2019 (74,200 and 64,500 respectively).<sup>1</sup>

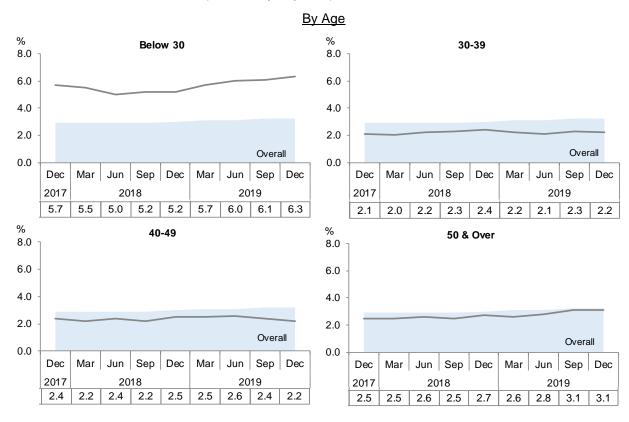

<sup>&</sup>lt;sup>1</sup> Based on seasonally adjusted data on number of unemployed persons.

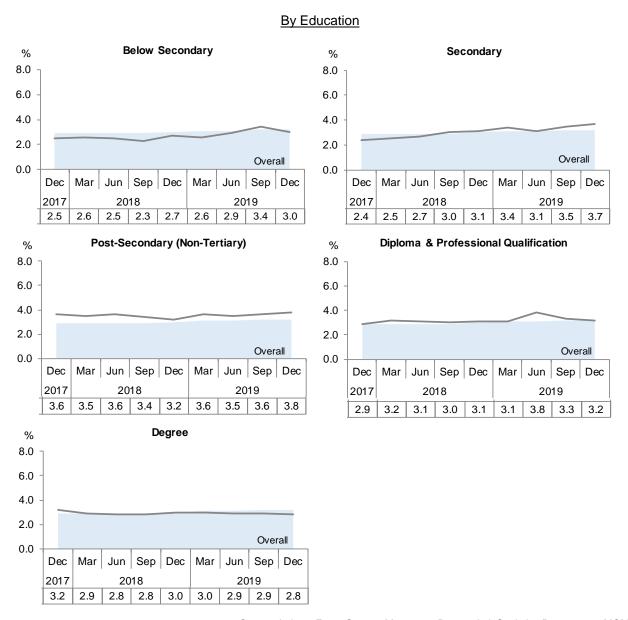

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

The unemployment rate for residents aged below 30, and those with secondary and post-secondary (non-tertiary) qualifications continued to trend higher. Unemployment rates for the remaining age and education groups either declined or were unchanged.

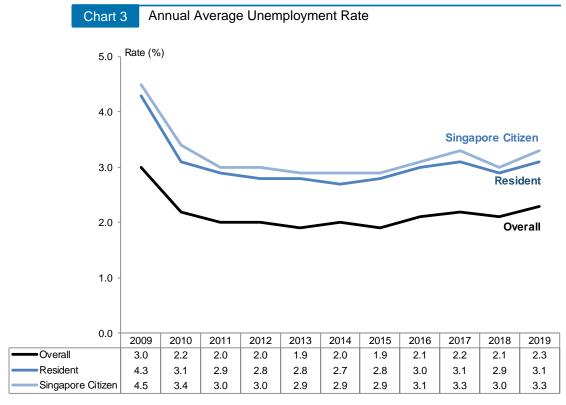

## Chart 2 Resident Unemployment Rate By Age And Education (Seasonally Adjusted)

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

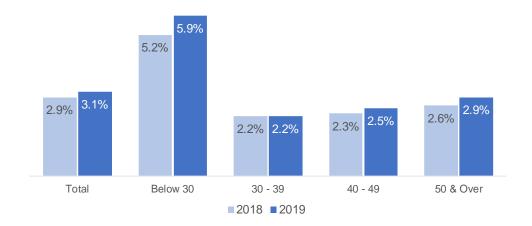

While annual average rates were higher in 2019, they remained in the fairly low range of recent years As quarterly unemployment rates in 2019 were consistently higher than in 2018, the unemployment rates averaged for the year edged up (overall: from 2.1% to 2.3%, residents: from 2.9% to 3.1%, citizens: from 3.0% to 3.3%). Nonetheless, the rates remained in the fairly low range of recent years. Among residents, unemployment rates held steady or rose in 2019 for all age and education groups.

Note: Annual figures are the simple averages of the non-seasonally adjusted figures obtained at quarterly intervals.

Resident longterm unemployment rate rose in December 2019 Quarter-on-quarter, the seasonally adjusted resident long-term unemployment rate rose for the second consecutive quarter to 0.9% in December 2019, from 0.8% in September 2019.

Most age and education groups saw an increase in long-term unemployment rates over the quarter, and the rate was the highest for residents aged 50 & over.

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM Note: Long-term unemployed refers to those unemployed for at least 25 weeks.

- (1) Long-term unemployed refers to those unemployed for at least 25 weeks.
  (2) \* These series are not seasonally adjusted because they have weak or no seasonality.

Annual average long-term unemployment rate unchanged in 2019

The annual average resident long-term unemployment rate in 2019 was unchanged from 2018 (0.7%). However, trends were mixed across age and education groups. In particular, residents at both ends of the age spectrum, and those with non-tertiary qualifications, saw a rise in long-term unemployment rate.

#### **Employment**

Total
employment
increased at
a slightly
slower pace
than the
previous
quarter

In the fourth quarter of 2019, total employment (excluding foreign domestic workers (FDW)) grew by 18,300. This was lower than the preceding quarter (21,700), but still higher than the same quarter a year ago (14,700).

The slower pace of increase over the quarter was more notable in *Services*, though it remained the main driver of employment growth (12,700 excluding FDW). Increases were in most sub-services sectors, with *food & beverage services* (3,200) and *retail trade* (2,400) leading the increase in the quarter that included year-end festivities. *Accommodation* (-500) and *wholesale trade* (-500) were the only sectors which saw employment decline, the latter for the fourth straight quarter.

Employment continued to grow in *Construction* (4,200) but the growth also eased over the quarter. *Manufacturing* registered its second consecutive quarter of employment growth in the fourth quarter of 2019 (1,300). *Transport equipment* (1,800) and *food, beverages & tobacco* (800) were the main contributors, outweighing declines mainly in *electronics* (-700) as output fell with the global electronics downswing.

#### Notes

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Employment change is the difference in the employment level at the end of the reference period compared with the end of the preceding period.

**Employment Change By Sector** 

Source: Administrative Records and Labour Force Survey, Manpower Research & Statistics Department, MOM

#### Notes:

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Data for the three major sectors do not add up to the total as the latter includes agriculture, fishing, quarrying, utilities and sewerage & waste management.
- (3) The industries are classified based on SSIC 2015.
- (4) 'Excl FDW' refers to excluding foreign domestic workers.

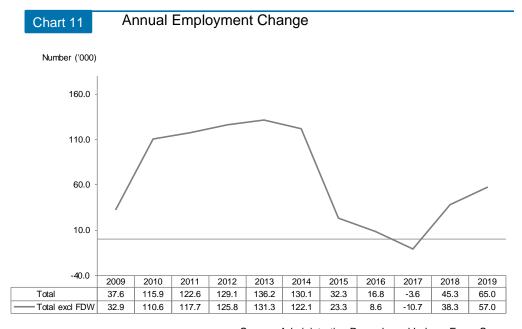

Chart 10

Total
employment
growth in
2019 was the
highest in
five years

For the whole of 2019, total employment growth (excluding FDW) was 57,000. The increase, largest in the past five years, was mostly due to local employment growth (28,300) and foreign worker increases in *Construction* (13,900).

Employment growth in the Services sector (47,000) was broadly similar to last year, and growth was led by community, social & personal services (13,000 excluding FDW, mainly health & social services and public administration & education), professional services (10,000, mainly legal, accounting & management services) and information & communications (7,100). Construction added 12,500 workers, a first in four years. On the other hand, total employment continued to decline in Manufacturing (-2,400) for the sixth consecutive year.

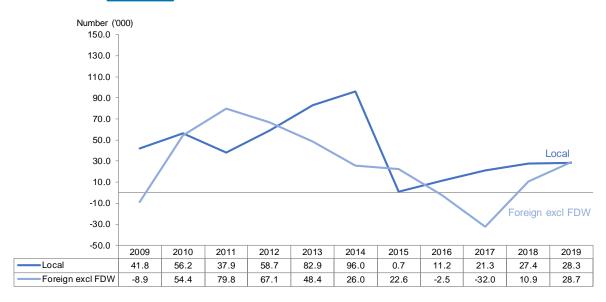

In December 2019, there were 3,518,000 persons in employment (excluding FDW), with 2,357,100 locals and 1,160,900 foreigners. Of every three persons in employment (excluding FDW), two were locals (67.0%) and one was a foreigner (33.0%).

- (8) The industries are classified based on SSIC 2015.

#### **Local And Foreign Employment By Sector**

Local
employment
growth
tracks total
employment
growth
closely

Similar to total employment growth, local employment growth was higher in 2019 (28,300) compared to 2018 (27,400). The trends in local employment growth by sectors also largely mirrored that for total employment. The majority of the local employment increase was in *Services*, including community, social & personal services, professional services, financial & insurance services and information & communications.

Foreign employment increase in 2019 (28,700 excluding FDW) was driven by *Construction* (13,900, mostly Work Permit & Other Work Passes) as well as *Services* (15,100), the latter easing from the growth in 2018 (16,600).

Excluding *Construction*, foreign employment growth in 2019 (14,900 excluding FDW) would have been lower than that for locals (29,700), as well as the foreign growth in the previous year (16,300).

Source: Administrative Records and Labour Force Survey, Manpower Research & Statistics Department, MOM

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Data for the three major sectors do not add up to the total as the latter includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management.
   (3) Data may not add up to the total due to rounding.
   (4) 'excl FDW' refers to excluding foreign domestic workers.

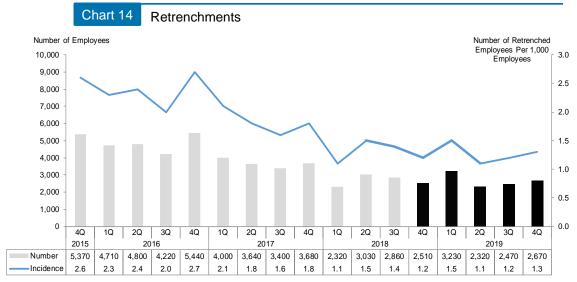

- (5) The industries are classified based on SSIC 2015.

#### Retrenchment

Slightly more retrenchments in the fourth quarter of 2019

The number of retrenchments in the fourth quarter of 2019 (2,670) was slightly higher than the previous quarter (2,470) and a year ago (2,510). This increase was seen across the three broad sectors.

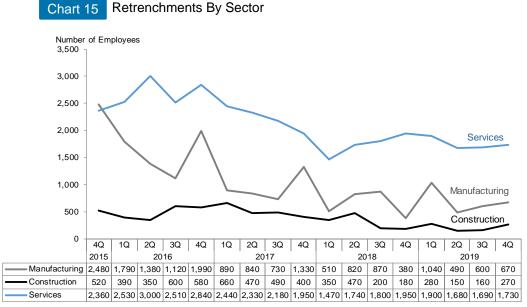

The majority of the retrenchments occurred in *Services* (65%), led by *professional services* (16%), *wholesale trade* (15%) and *financial services* (11%). Business restructuring and re-organisation accounted for the bulk of the retrenchments in the fourth quarter of 2019.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

#### Notes

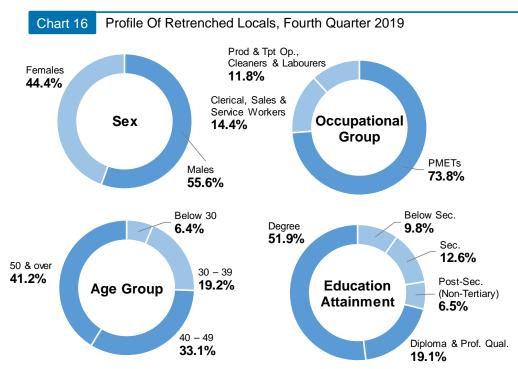

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data on the number of retrenchments are rounded to the nearest 10.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data are rounded to the nearest 10. Hence, they may not add up due to rounding.

The profile of retrenched locals largely mirrored that of employed locals. In the fourth quarter of 2019, about seven in ten of retrenched locals were professionals, managers, executives & technicians (PMETs) and another three in ten were non-PMETs. The share from PMETs was higher than non-PMETs as the PMET share of the workforce has risen, and most retrenchments occurred in PMET-dominated sectors.

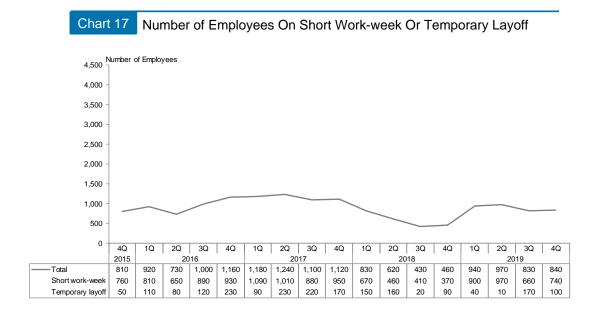

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data on retrenched locals pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data may not add up to the total due to rounding.

Slight increase in number of employees placed on short work-week There was a slight increase in the number of employees placed on short work-week in the fourth quarter of 2019 (from 660 to 740). On the other hand, fewer employees were placed on temporary layoffs over the quarter (from 170 to 100). Overall, the number of employees placed on short work-week or temporary layoffs held steady.

Most of the affected employees were from *Manufacturing* (70%), with the remaining split between *Construction* (15%) and *Services* (14%). By occupation, PMETs (76%) formed the majority of those affected, followed by production & related workers (15%) and clerical, sales and service workers (9%).

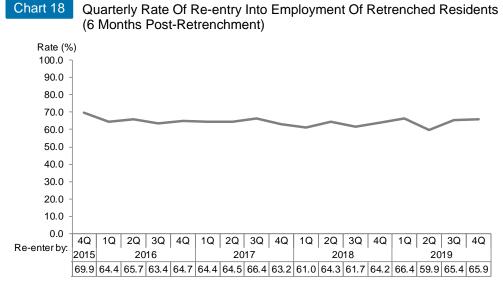

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data are rounded to the nearest 10. Hence, they may not add up to the total.

#### **Re-entry Into Employment**

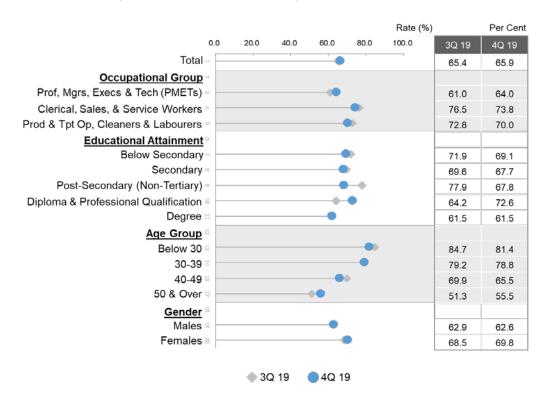

Quarterly rate of re-entry into employment edged up The six-month re-entry rate among retrenched residents continued to increase, from 65% in the third quarter of 2019 to 66% in the fourth quarter of 2019. The increase was observed mainly for residents aged 50 & over, PMETs, and diploma & professional qualification holders.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

- (1) Data refer to re-entry rates for residents retrenched 6 months ago by private sector establishments (each with at least 25 employees) and the public sector. For example, the re-entry rate for the fourth quarter of 2019 refers to residents retrenched in second quarter of 2019.
- (2) Data on re-entry into employment are cohort-specific. Two different cohorts of workers laid off could yield different re-entry rates depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or undergo training while looking for a job.

Chart 19 Quarterly Rate Of Re-entry Into Employment Of Retrenched Residents (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

Note: Data refer to re-entry rates in the third/fourth quarter of 2019 for residents retrenched in the first/second quarter of 2019 by private sector establishments (each with at least 25 employees) and the public sector and re-entered employment, 6 months post-retrenchment.

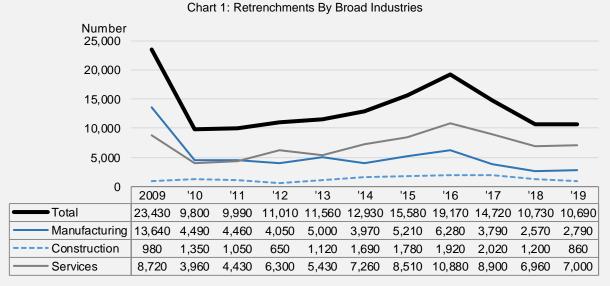

#### **Retrenchment & Re-Entry Into Employment (Annual)**

#### Retrenchments

Despite economic headwinds, the number of retrenchments remained low in 2019 (10,690), and at a similar level as 2018 (10,730). Fewer private sector establishments carried out retrenchments in 2019 (1,189) compared to 2018 (1,239).

#### Bulk of retrenchments took place in Services

Services continued to account for most retrenchments (66%) in 2019, mainly in *wholesale trade* (17%), *professional services*<sup>1</sup> and *financial services* (both at 11%). These were industries where re-organisation and restructuring were occurring. The remaining retrenchments were in *Manufacturing* (26%)<sup>2</sup> and *Construction* (8%).

#### Notes:

(1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

(2) Data are rounded to the nearest 10. Hence, they may not add up due to rounding.

<sup>&</sup>lt;sup>1</sup> Mainly Legal, Accounting and Management Services.

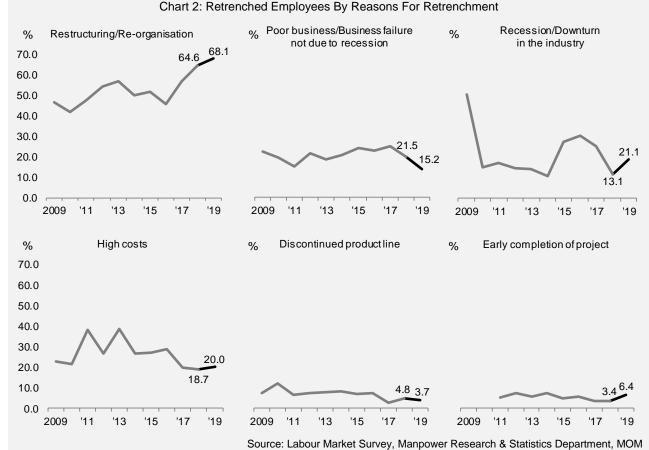

<sup>&</sup>lt;sup>2</sup> Mainly Electronics and Fabricated Metal Products & Machinery.

### Business restructuring and re-organisation remained the top reason cited by firms for retrenchments

Retrenchments commonly take place due to restructuring and re-organisation. The number of retrenchments as a result of restructuring and re-organisation rose steadily, from 46% in 2016 to 68% in 2019, as businesses transform due to changing environments.

Retrenchments due to sectoral downturn rose in 2019. They occurred mostly in the *electronics* sector, which posted output declines.<sup>3</sup>

The share of retrenchments due to other reasons such as poor business, high costs, discontinued product line and early completion of project declined or remained stable.

Notes:

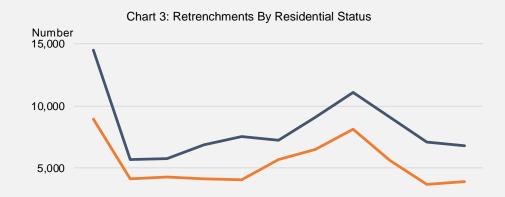

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Establishments can indicate more than one reason.
- (3) Data on reasons for retrenchment are available from 2009. Data on early completion of project are available from 2011.

<sup>&</sup>lt;sup>3</sup> Source: Economic Survey of Singapore 2019, MTI.

#### Local share of retrenchments fell

The number of local retrenchments fell in 2019 (6,790) compared to 2018 (7,070), while the number of foreign retrenchments rose (from 3,660 to 3,890). The local share of retrenchments declined slightly from 66% in 2018 to 64% in 2019.

While locals remained slightly more likely to be retrenched than foreigners (whose employment could be ended through contract expiry), their incidence of retrenchment continued to decline in 2019, while that for foreigners rose.

#### **Profile Of Retrenched Locals**

#### Likelihood of retrenchment among PMETs had declined

PMETs formed the majority of local retrenchments because their share in the workforce had risen, and most retrenchments occurred in PMET dominated sectors e.g. *professional services* and *financial services*.

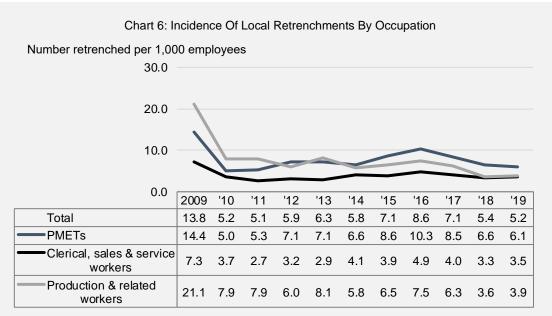

However, PMETs are now less likely to be retrenched than previous cohorts. Their incidence of retrenchment had declined steadily since 2016 to 6.1 local PMETs retrenched per 1,000 local PMET employees in 2019. Clerical, sales & service workers (3.5 workers per 1,000 employees) and production & related workers (3.9 workers per 1,000 employees) had a relatively lower incidence of retrenchment, though this had risen slightly compared to 2018.

Chart 5: Share Of Local Retrenchments By Occupation % 80.0 60.0 40.0 20.0 0.0 2009 2010 2011 2012 2013 2014 2015 2016 2017 2018 2019 **PMETs** 55.1 51.4 56.8 66.5 65.7 65.6 71.1 71.8 72.0 ·Clerical, sales & service 14.8 20.2 14.5 14.4 11.2 17.3 13.4 13.8 13.4 13.7 14.8 workers Production & related 30.2 28.5 28.7 19.1 23.0 17.1 15.5 14.4 14.6 10.6 11.6 workers

#### Note:

Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

#### Older workers continued to form a higher share of local retrenchments

Older workers aged 40 & over continued to form the majority of local retrenchments. Within this group, there had been a steady increase in the proportion of those aged 50 & over, notably among PMETs and production & related workers. This mirrored the workforce composition.

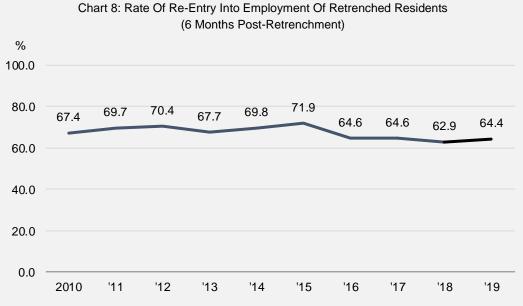

e:

Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

### **Re-entry Into Employment**

### Re-entry rate inched up and remained within range of recent years

The six-month re-entry rate among retrenched residents inched up, from 63% in 2018 to 64% in 2019.<sup>4</sup> It remained within the range seen in recent years. Re-entry rates were relatively lower for residents aged 50 & over, PMETs and degree holders. The latter two groups spend more time looking for jobs that match their job and salary expectations. When tracked over a longer period (more than 6 months), the re-entry rates for these groups improved, though they still remained slightly below average.

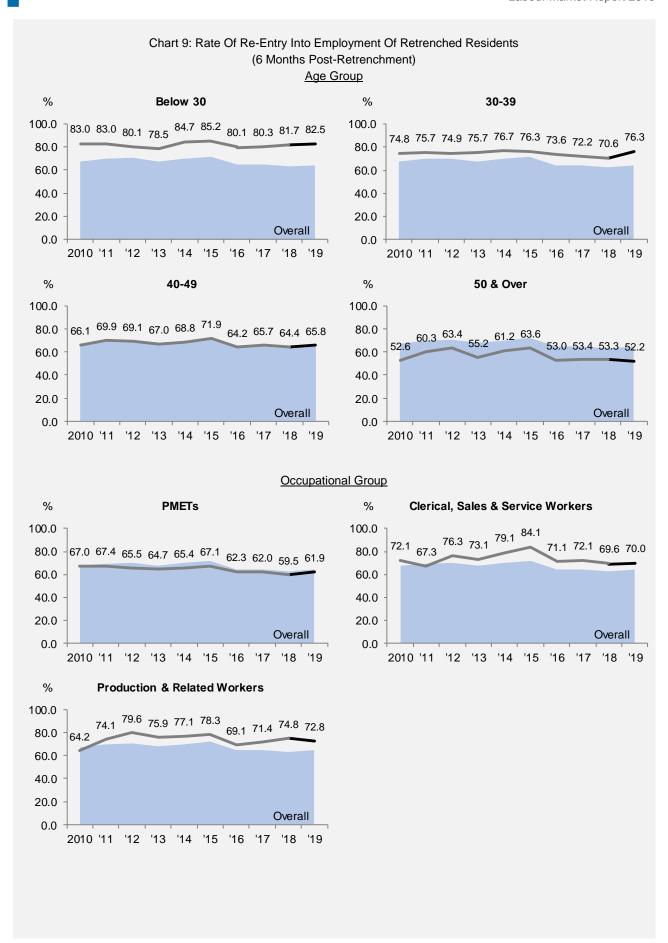

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

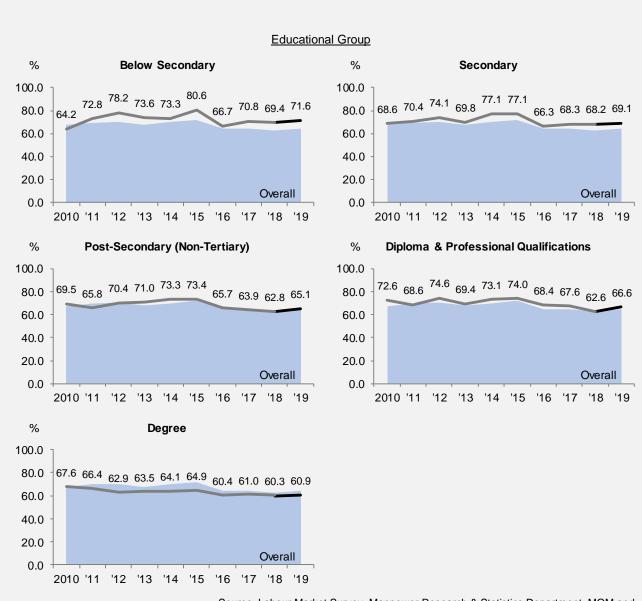

### Notes:

(1) The annual rates refer to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.

(2) Data pertain to residents retrenched by private sector establishments (each with at least 25 employees) and the public sector.

<sup>&</sup>lt;sup>4</sup> The 2019 re-entry rate pertains to residents retrenched from 3Q 2018 to 2Q 2019, who re-entered employment by the end of 2019, given 6 months post-retrenchment.

- (1) The annual rates refer to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.
- (2) Data pertain to residents retrenched by private sector establishments (each with at least 25 employees) and the public sector.

# Majority of those who re-entered switched industry

The majority (67%) of residents who re-entered employment joined a different industry in 2019. Residents who were retrenched from *Construction* and *retail trade* were more likely to re-enter into a similar industry.

Chart 10: Share Of Retrenched Residents Who Re-Entered Employment By Similar Or Different Industry (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

### Notes:

- (1) Data for Accommodation are suppressed due to small numbers.
- (2) Data pertain to residents retrenched by private sector establishments (each with at least 25 employees) and the public sector.

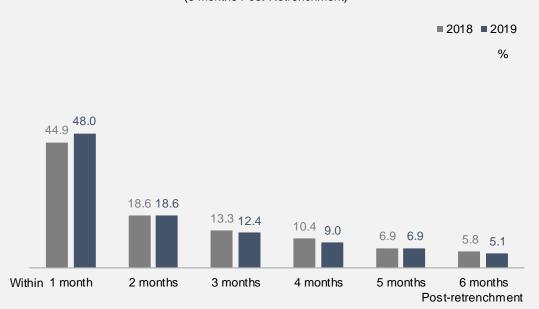

Real Estate Services 3.7%

(3) Similar industry after re-entry is determined based on comparison of industry before and after retrenchment using two-digit Singapore Standard Industrial Classification (SSIC) groupings.

### Nearly half of residents who re-entered employment did so within a month

In 2019, among those who re-entered employment, 48% did so within the first month. This was higher than in 2018 (45%). While the majority of retrenched PMETs and degree holders re-entered employment within the first month, they were less likely to do so compared to other occupation and education groups.

Chart 12: Share Of Retrenched Residents Who Re-Entered Employment By Time Taken (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

- (1) Data pertain to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.
- (2) Data pertain to residents retrenched by private sector establishments (each with at least 25 employees) and the public sector.

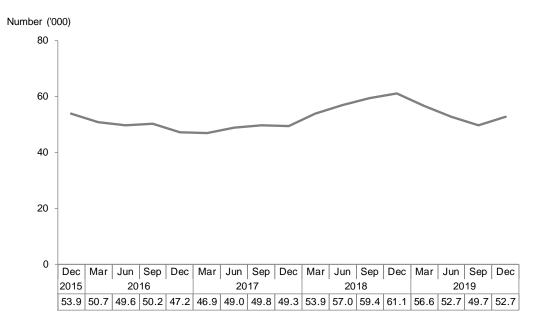

# **Job Vacancy**

Job vacancies to unemployed ratio was unchanged over the quarter The seasonally adjusted ratio of job vacancies to unemployed persons in December 2019 (0.84) was unchanged from September 2019, as both the number of unemployed persons and vacancies for the whole economy declined. The decline in vacancies for the whole economy reflects a decline in estimated job vacancies for small establishments.<sup>2</sup> This outweighed the increase in job vacancies among private establishments with 25 or more employees and public sector, which rose from 49,700 in September 2019 to 52,700 in December 2019, after three consecutive quarters of decline.

However, there were fewer vacancies in December 2019 compared to December 2018, as employers exercised greater caution in hiring due to the uncertain business environment. The decline in job vacancies was broadbased, but more so for production & related workers (-3,900, primarily in *Construction*) and clerical, sales & service workers (-2,300, led by administrative & support services and transportation & storage). The decline in PMET vacancies (-1,600) was predominantly due to Manufacturing, particularly electronics.

<sup>&</sup>lt;sup>2</sup> These are private sector firms with less than 25 employees. Their seasonally adjusted vacancies, based on the vacancy rate for firms with 25-49 employees, was estimated to have declined from 21,500 in September 2019 to 18,400 in December 2019.

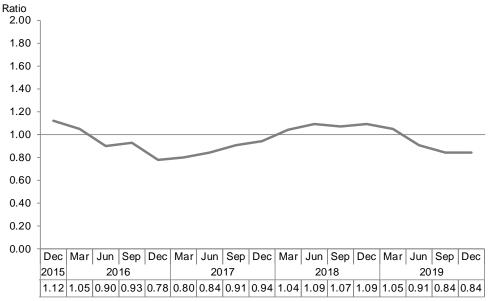

# Chart 20 Job Vacancy (Seasonally Adjusted)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

# Chart 21 Ratio Of Job Vacancies To Unemployed Persons (Seasonally Adjusted)

Source: Labour Market Survey and Labour Force Survey, Manpower Research & Statistics Department, MOM

Note: Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy are estimated assuming that private sector establishments with less than 25 employees have the same vacancy rate as those with 25-49 employees.

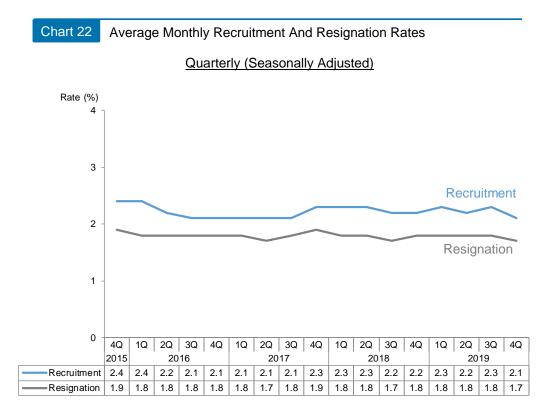

# **Labour Turnover**

Recruitment activity dipped over the quarter

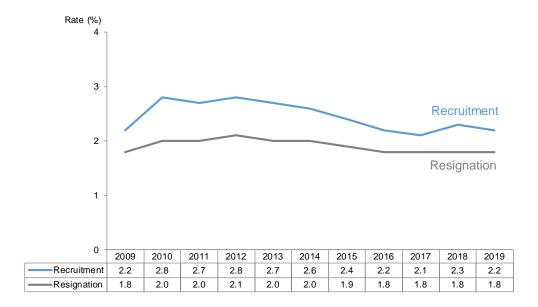

Both recruitment (from 2.3% to 2.1%) and resignation (from1.8% to 1.7%) rates were lower in the fourth quarter of 2019 compared to the previous quarter.

Compared to the same period a year ago, labour turnover fell across most industries, particularly in *financial services* and *real estate services*. *Accommodation* and *security* & *investigation* were the exceptions as both recruitment and resignation rates rose over the year.

Averaged for the year, the recruitment rate declined in 2019 (from 2.3% to 2.2%), while the resignation rate was 1.8%, unchanged for four years.

### Annual Average

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

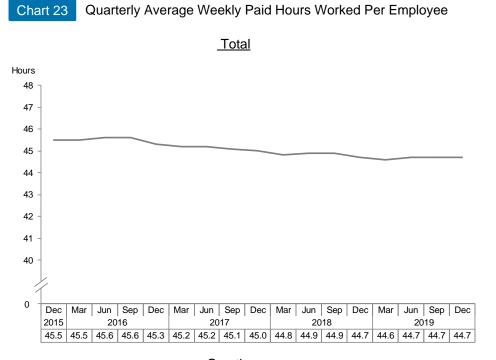

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) The average monthly resignation/recruitment rate is defined as the average number of person who resigned / who were recruited in a month divided by the average number of employees in the establishment.
- (3) Annual figures are computed based on the simple averages of the four non-seasonally adjusted quarterly figures in the year.

# **Hours Worked**

Paid hours worked per employee edged down on a full-year basis The total weekly paid hours worked<sup>3</sup> per employee was unchanged over the quarter in December 2019 (44.7 hours). As the paid hours worked in the first three quarters of 2019 were consistently lower than the corresponding periods in 2018, the annual average paid working hours fell further to 44.7 hours in 2019, continuing its downtrend from 2013.

Comparing December-on-December, there were more pronounced declines in 2019 for professional services (mainly architectural & engineering services) and administrative & support services (mainly security & investigation and cleaning & landscaping). On the other hand, workers in financial & insurance services and wholesale trade saw larger increases in paid hours over the year.

<sup>&</sup>lt;sup>3</sup> Average weekly paid hours worked per employee are based on the last month of each quarter.

- 1) The quarterly rates show the rates of re-entry into employment in a quarter for residents retrenched six months ago.
- 2) The annual rate refers to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.
- 3) Data refer to the proportion of residents retrenched by private sector establishments (each with at least 25 employees) and the public sector, who re-entered employment six months after they were retrenched.

<sup>\*</sup> Includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management. Notes :

<sup>1)</sup> Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

<sup>2)</sup> Annual figures are the simple averages of the figures obtained at quarterly intervals.

# **Explanatory Notes**

### **Unemployment**

#### Source

Labour Force Survey

### Coverage

The survey covers private households in Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore. Estimates of the total labour force are derived by combining data on residents (also known as locals) obtained from the survey with foreign employment data compiled from administrative records.<sup>1</sup>

### **Concepts and Definitions**

**Unemployed persons** refer to persons aged 15 years and over who did not work but were actively looking and available for work during the reference period. They include persons who were not working but were taking steps to start their own business or taking up a new job after the reference period.

**Unemployment rate** is defined as the percentage of unemployed persons to the labour force (i.e. employed and unemployed persons) aged 15 years and over.

**Long-term unemployed persons** refer to persons aged 15 years and over who have been unemployed for 25 weeks or more.

Long-term unemployment rate is defined as the percentage of long-term unemployed persons to the labour force.

### **Uses and Limitations**

The unemployment rate is probably the best-known measure of the labour market. It measures unutilised labour supply and is useful in the study of the economic cycle as it is closely related to economic fluctuations.

Unemployment can have frictional, cyclical and structural elements. As it takes time for job seekers and employers to find a match, there is always a certain level of frictional unemployment due to people changing jobs and from new entrants looking for work for the first time. Unemployment can also be structural e.g. arising from a mismatch between the job seekers and the job openings available. With structural unemployment, even if job vacancies and job seekers coexist in the labour market, they may not be matched over a long period of time. Finally, unemployment can be cyclical. This occurs when there is a general decline in demand for manpower as aggregate demand for goods and services fall in the event of a cyclical downturn. Unlike structural and frictional unemployment where the problem is in matching job openings with job seekers, cyclical unemployment occurs when there are not enough jobs to go around.

Unemployment can vary due to changes in demand or supply of manpower. It can decline if more people succeed in securing employment or when the unemployed persons stop looking for a job and leave the labour force either temporarily (e.g. to take up training) or permanently (e.g. to retire). Conversely, unemployment may rise due to

<sup>&</sup>lt;sup>1</sup> Population figures for each quarter will be finalised in the next quarter. Unemployment data are therefore subject to the latest available population estimates.

increase in labour supply from new entrants or re-entrants to the labour market. It will also rise if more people quit their jobs to look for alternative employment or if there is an increase in layoffs.

Unemployment rates by specific groups, defined e.g. by age and educational attainment are useful in identifying groups of workers most vulnerable to unemployment.

### **Employment**

#### Source

Primarily from administrative records. The self-employed component is estimated from the Labour Force Survey.

### Coverage

Employment data comprise all persons in employment i.e. employees and the self-employed. However, it excludes men who are serving their 2-year full-time national service liability in the Singapore Armed Forces, Police and Civil Defence Forces.

Data on the number of local (also known as resident) employees are compiled from the Central Provident Fund (CPF) Board's administrative records of active contributors, defined as local employees who have at least one CPF contribution paid for him/her. A local employee is a Singapore citizen or Permanent Resident who is employed by an employer under a contract of service or other agreement entered into in Singapore. Every local employee and his/her employer are required to make monthly contributions to the CPF. The CPF is a compulsory savings scheme that provides workers financial security in old age and helps meet the needs of healthcare, home-ownership, family protection and asset enhancement.

Data on foreigners working in Singapore are compiled from administrative records of foreigners on valid work passes issued by the Ministry of Manpower. Foreigners can work in Singapore only if they have valid work passes issued by the Ministry of Manpower.

The number of self-employed residents is estimated from the Labour Force Survey. The self-employed comprises persons aged 15 years and over who are own account workers, employers or contributing family workers.

#### **Concepts and Definitions**

**Employment change** refers to the change in the number of persons who are in employment, derived by taking the difference in the employment level (i.e. number of employed persons) at the end of the reference period compared with the end of the preceding period. A positive change refers to the additional number of persons who are in employment, while a negative change refers to the decline in number of persons in employment.

### **Uses and Limitations**

Analysis of employment change over time helps in understanding the impact of cyclical and structural changes in the economy on the demand for workers. In particular, the breakdown of employment by industry helps identify sectors where employment is growing or falling.

Conceptually, the change in employment over the reference period is the difference between people entering and exiting employment during the period. Users should not mistake an increase in employment as gross job creation i.e. the increase in employment in expanding establishments only.

### Retrenchment

### Source

Labour Market Survey

### Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

### **Concepts and Definitions**

#### Retrenchment refers to

- i) termination of permanent employees due to redundancy; and
- ii) early termination of term contract employees due to redundancy.

In the public sector, it includes those who left service under the Special Resignation Scheme<sup>2</sup>.

### **Uses and Limitations**

Data on retrenchment are useful in the analysis of re-structuring or ailing industries.

The number of retrenched persons (flow) should not be confused with persons unemployed (stock). Not all retrenched persons will be unemployed as some will re-enter into employment or decide to leave the labour force. If the persons have not found a new job and are actively looking and available for work, they join the pool of unemployed.

### **Re-entry into Employment**

### Source

Labour Market Survey and derived based on data from administrative records

### Coverage

Information on retrenched resident workers is obtained from the Labour Market Survey. Before 2007, data pertain to residents retrenched from private sector establishments with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector. With effect from the first quarter of 2010, the coverage is further expanded to include employees on term contracts which were terminated prematurely due to redundancy. The status of re-entry into employment of these workers is tracked using administrative records. Hence, it does not capture retrenched workers who went into self or informal employment or undergo training while looking for a job.

<sup>&</sup>lt;sup>2</sup> The Special Resignation Scheme (introduced in April 1988) allows redundant non-deployable Civil Service or Statutory Board employees to leave their organisations with compensation.

### **Concepts and Definitions**

**Re-entry rate** is defined as the proportion of retrenched residents who re-entered employment. The re-entry rate (6 months post-retrenchment) refers to the re-entry rate in a quarter for the residents retrenched six months ago. For example, the re-entry rate for the first quarter 2019 shows the proportion of residents retrenched in the third quarter of 2018 who had re-entered employment six months after they were retrenched. The annual rates refer to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment. For example, the 2019 re-entry rate pertains to residents retrenched from 3Q 2018 to 2Q 2019, who re-entered employment by 2019 (given 6 months post-retrenchment).

### **Uses and Limitations**

This indicator measures the prospects of re-entry into employment of retrenched workers. It allows us to identify vulnerable workers who find it difficult to secure re-entry into employment after layoff.

A low re-entry rate could also be the result of workers taking a break from the labour force rather than a weak job market. An analysis of the change in re-entry rate over time should therefore be made in the context of other indicators on the labour market. Also, the indicator could be cohort-specific. Even if the state of the labour market is unchanged, two different cohorts of workers could yield different re-entry rates, depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or undergo training while looking for a job.

### **Job Vacancy**

### Source

Labour Market Survey

### Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

### **Concepts and Definitions**

**Job vacancy** refers to the number of unfilled posts which an establishment is actively recruiting employees from outside the establishment. They exclude:

- a) Positions for which the employees have been appointed, but have not yet commenced duty;
- b) Positions open only to internal transfers or promotions.

Recruitment action to fill a post includes advertising in newspapers, posting notices on the internet (e.g. on online job banks), making word-of-mouth announcements, soliciting employees through employment agencies or job fairs, contacting or interviewing job applicants.

**Job vacancy rate** for a quarter is defined as the number of job vacancies divided by the demand for manpower at the end of the quarter. The demand for manpower is defined as the sum of the number of employees and job vacancies at the end of the quarter. The annual figures are the simple averages of the quarterly figures.

**Job vacancy to unemployed ratio** is calculated by taking the ratio of the estimates of the total number of job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy is estimated based on the assumption that private sector establishments with less than 25 employees have the same vacancy rate as private establishments with 25-49 employees. Estimates on the total number of unemployed persons are obtained from the Labour Force Survey.

#### **Uses and Limitations**

Job vacancy statistics measure unmet demand for manpower and are useful for assessing changes in the manpower demand over time. They enable users to identify industries and occupations where employers are seeking workers. This can have operational use e.g. in improving vocational guidance and helping job seekers and employers make more informed choices.

Data on job vacancies can assist in pinpointing emerging labour shortages. To identify labour shortages, trends in vacancy data would have to be evaluated together with other labour market indicators as well as background information on the occupations and factors affecting demand and supply of workers. This is because persistent job vacancies may indicate either real shortages or factors such as low wages, poor working conditions and unrealistic hiring specifications.

### **Labour Turnover**

#### Source

Labour Market Survey

### Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

### **Concepts and Definitions**

**Average monthly recruitment rate** during a quarter is defined as the average number of persons recruited in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

**Average monthly resignation rate** during a quarter is defined as the average number of persons who resigned in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

### **Uses and Limitations**

In good times when job openings are plentiful, recruitment and resignation rates tend to be high reflecting movement of workers between jobs. In periods of economic downturn, high layoffs are usually coupled with low resignation and recruitment rates.

The resignation rates by industry are valuable to employers for comparing their staff turnover against the industry norm. Low resignation rate in a company relative to the industry average is usually considered to be an indicator of good labour-management relations. Labour turnover also reflects the unique labour market dynamics of the

various industries. For example, accommodation and food services typically have higher turnover rates because of their heavy reliance on temporary and part-time workers to cope with seasonal fluctuations in demand.

### **Paid Hours Worked**

#### Source

Labour Market Survey

### Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

### **Concepts and Definitions**

**Total paid hours worked** refers to the total number of paid hours worked during a week by an employee. It is the sum of standard hours and paid overtime hours worked.

**Standard hours worked** refers to the number of hours, excluding meal breaks worked by an employee during a normal working week.

**Paid overtime hours worked** refers to the number of hours worked by an employee during a week in excess of the standard hours for which the employees were paid. It excludes overtime hours worked for which "time-off" was granted instead of wage payment.

### **Uses and Limitations**

Data on paid total and overtime hours worked are used as a gauge of the level of economic activities and working conditions of the various industries. The data can also be used for social studies on family and community life.

Management staff and executives are normally not paid additional hourly wages for working overtime. For this group of staff, users can refer to statistics on usual hours worked from the mid-year Comprehensive Labour Force Survey.

# **Reliability of Data**

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the extent of variation between the estimated value obtained from a sample and the true value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

A common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the true value. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of selected indicators are as follows:

	Reference	Estimate	Standard	Relative Standard	95% Confide	ence Interval
	Period	Estimate	Error	Error (%)	Lower	Upper
UNEMPLOYMENT						
Number of Unemployed Residents	Dec 19	63,900	2,400	3.8%	59,200	68,600
Resident Unemployment Rate	Dec 19	2.7%	0.10%-pt	3.9%	2.5%	2.9%
JOB VACANCY						
Job Vacancy Number	Dec 19	50,000	1,000	2.0%	47,900	52,000
Job Vacancy Rate	Dec 19	2.3%	0.05%-pt	2.0%	2.3%	2.4%
LABOUR TURNOVER						
Average Monthly Recruitment Rate	4Q 19	2.0%	0.03%-pt	1.3%	1.9%	2.0%
Average Monthly Resignation Rate	4Q 19	1.5%	0.02%-pt	1.1%	1.4%	1.5%
HOURS WORKED						
Average Weekly Paid Overtime Hours Worked Per Employee	Dec 19	2.7	0.03	1.2%	2.6	2.7

Note: Data are non-seasonally adjusted.
