MISSION

To provide timely and reliable national statistical information on the labour market to facilitate informed decision-making within the government and community-at-large

Statistical activities conducted by the Manpower Research and Statistics Department (MRSD) are governed by the provisions of the Statistics Act (Chapter 317). The Act guarantees the confidentiality of information collected from individuals and companies. It spells out the legislative authority and responsibility of the Director, Manpower Research and Statistics Department.

Statistics compiled and disseminated by the MRSD adhere to international standards on official statistics set by the International Labour Organisation and International Monetary Fund.

For insights on the labour market, visit us at stats.mom.gov.sg

Recruitment

Turnover rates remained stable

Average monthly recruitment and resignation rates (%), seasonally adjusted

Labour Market Report First Quarter 2019

HIGHLIGHTS

- In line with the Labour Market Advance Release, most indicators showed that the labour market held up in the first quarter of 2019, even though the economy slowed. Total employment continued to grow, higher than the first quarter of 2018. The resident unemployment rate held steady, while long-term unemployment rate declined. However, while there continued to be more job vacancies than job seekers, the tightness in the labour market may ease, as job vacancies declined for the first time in two years and retrenchments rose in this quarter.
- The seasonally-adjusted overall (2.2%) and resident (3.0%) unemployment rates remained unchanged in March 2019, after rising in the previous quarter. However, the citizen unemployment rate continued to edge up slightly from 3.1% in December 2018 to 3.2% in March 2019. The resident long-term unemployment rate declined from 0.8% in December 2018 to 0.7% in March 2019.
- Total employment (excluding foreign domestic workers (FDW)) grew by 10,700 in the first
 quarter of 2019, significantly higher than the same period a year ago (400). The growth
 was lower than the fourth quarter of 2018 following the end of festive season hiring.
 Services was the main driver of total employment growth, while construction posted its
 first employment gain in three years, reflecting an increase in both public and private
 sector construction activities.
- 3,230 employees were retrenched in the first quarter of 2019, up from the previous quarter (2,510) and a year ago (2,320). The increase was driven by manufacturing, and affected mainly production & related workers from electronics. Nonetheless, the six-month reentry rate among retrenched residents rose for the second consecutive quarter to 66% in the first quarter of 2019.
- After seven preceding quarters of increases, the demand for labour eased, with fewer seasonally-adjusted job vacancies in March 2019 (57,100) compared to December 2018 (62,300). There continued to be more vacancies than job seekers, although the seasonally-adjusted ratio of job vacancies to unemployed persons dipped slightly from 1.10 in December 2018 to 1.08 in March 2019.

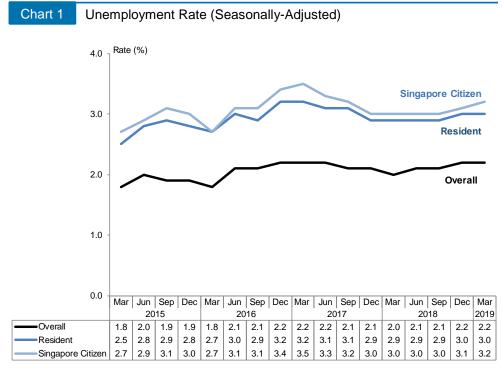

Overview

In line with the Labour Market Advance Release, most indicators showed that the labour market held up in the first quarter of 2019, even though the economy slowed. Total employment continued to grow, higher than the first quarter of 2018. The resident unemployment rate held steady, while long-term unemployment rate declined. However, while there continued to be more job vacancies than job seekers, the tightness in the labour market may ease, as job vacancies declined for the first time in two years and retrenchments rose in this quarter.

Unemployment

Unemployment rate held steady at the overall and for residents, and edged up for citizens

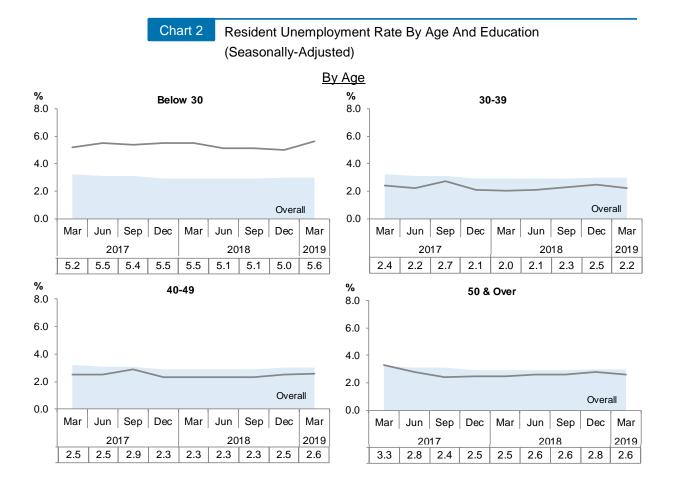

Quarter-on-quarter, the seasonally-adjusted overall (2.2%) and resident (3.0%) unemployment rates remained unchanged in March 2019, after rising in the previous quarter. However, the citizen unemployment rate continued to edge up slightly from 3.1% in December 2018 to 3.2% in March 2019.

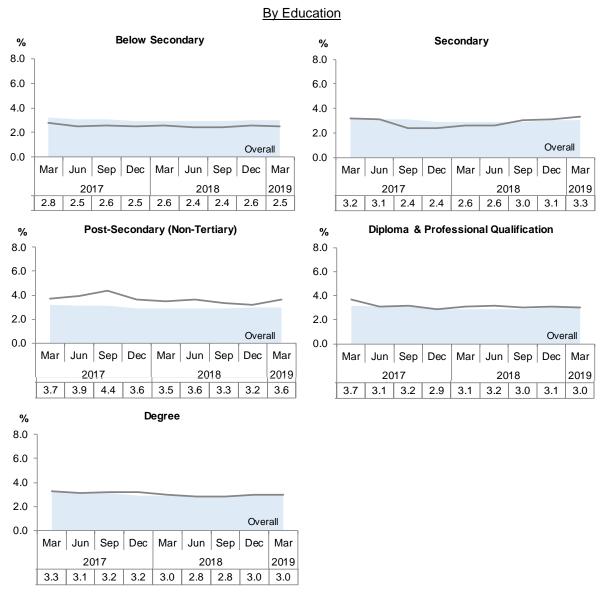

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

69,700 residents, including 62,200 citizens, were unemployed in March 2019. The number for citizens was higher than that in December 2018 (69,600 and 60,300 respectively).¹

Trends were mixed by age and education groups. The unemployment rate rose for residents with secondary and post-secondary (non-tertiary) qualifications. After holding steady since June 2018, the unemployment rate among residents aged below 30 rose. This occurred as more persons in the age group entered the labour force to look for work. The unemployment rate fell or was similar to the preceding quarter for the remaining age and education groups.

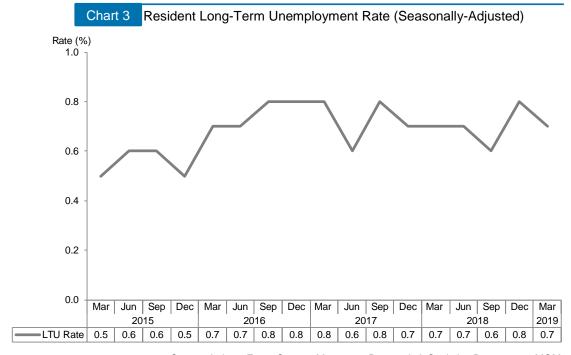

¹ Based on seasonally-adjusted data on number of unemployed persons.

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

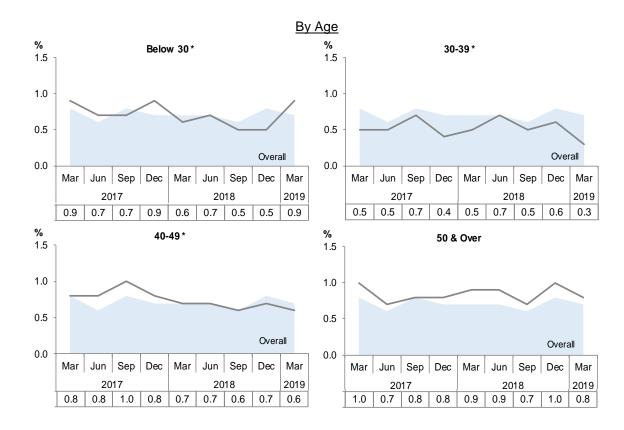

Resident long-term unemployment rate declined The seasonally-adjusted resident long-term unemployment rate² declined from 0.8% in December 2018 to 0.7% in March 2019. The rate fell or held steady for all age and education groups, except for residents aged below 30, whose long-term unemployment rate rose from 0.5% to 0.9% over the quarter, after trending down from December 2017. As a larger proportion of the job seekers aged below 30 had left previous employment due to job dissatisfaction, they are more likely to invest the time to search for a better job match.

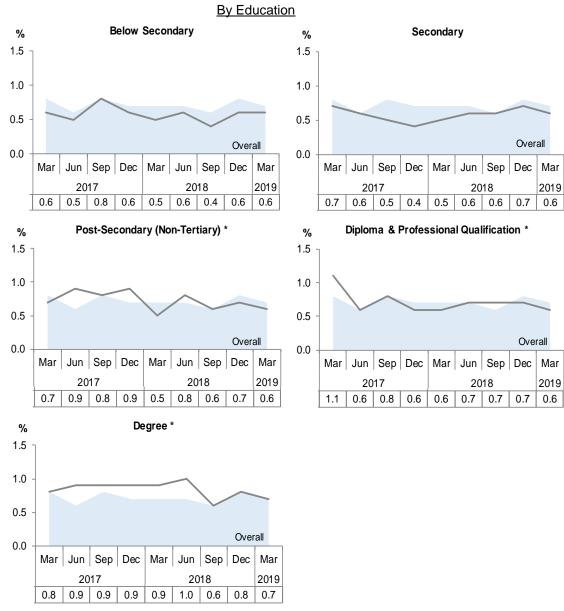

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM Note: Long-term unemployed refers to those unemployed for at least 25 weeks.

 $^{^{2}}$ The long-term unemployment rate is the percentage of long-term unemployed persons (i.e. those unemployed for at least 25 weeks) to the labour force.

Chart 4 Resident Long-Term Unemployment Rate By Age And Education (Seasonally-Adjusted)

Source: Labour Force Survey, Manpower Research & Statistics Department, MOM

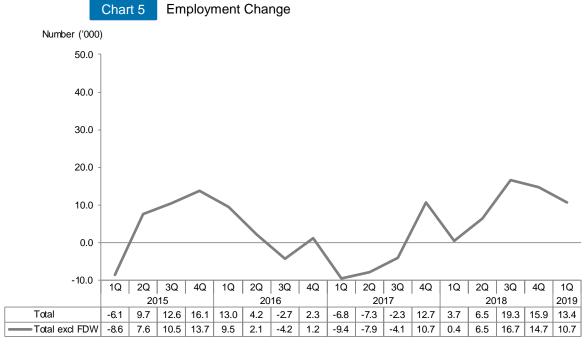

- (1) Long-term unemployed refers to those unemployed for at least 25 weeks.
- (2) * These series are not seasonally-adjusted because they have weak or no seasonality.

Employment

Total employment continued to grow

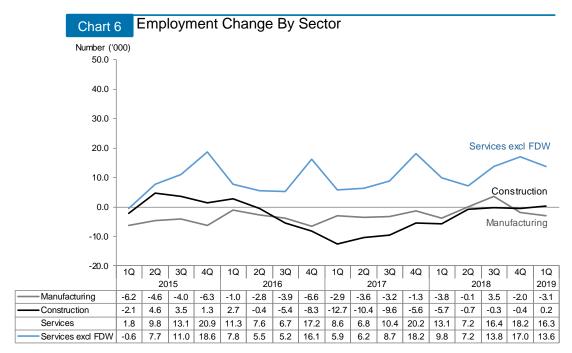

Total employment (excluding foreign domestic workers (FDW)) grew by 10,700 in the first quarter of 2019, significantly higher than the same period a year ago (400). The growth was lower than the fourth quarter of 2018 following the end of festive season hiring in December.

Services was the main driver of total employment growth in the first quarter of 2019 (13,600 excluding FDW), supported by gains in community, social & personal services (5,800, nearly half from public administration & education), professional services (2,800), administrative & support services (2,200), financial services (1,600), information & communications (1,200) and transportation & storage (1,200).

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Employment change is the difference in the employment level at the end of the reference period compared with the end of the preceding period.

Source: Administrative Records and Labour Force Survey, Manpower Research & Statistics Department, MOM

Notes:

- (1) Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
- (2) Data for the three major sectors do not add up to the total as the latter includes agriculture, fishing, quarrying, utilities and sewerage & waste management.
- (3) The industries are classified based on SSIC 2015.

Total employment also rose slightly in construction (200), a first in three years, reflecting an increase in both public and private sector construction activities.

On the other hand, employment declined in manufacturing for the second consecutive quarter (-3,100), led by cutbacks in Electronics (-2,000). The electronics cluster posted its largest employment contraction in six years.³ Looking ahead, hiring in the electronics sector is likely to remain subdued as firms project lower levels of production.⁴

³ The sector also saw a rise in retrenchments this quarter (from 80 to 600), mainly affecting production & related workers.

⁴ A net weighted balance of 5% of firms in electronics expected to reduce hiring in the second quarter of 2019. Source: Business Expectations of the Manufacturing Sector, EDB Singapore.

- Data are primarily from administrative records, with the self-employed component estimated from the Labour Force Survey.
 'Others' includes Agriculture, Fishing, Quarrying, Utilities and Sewerage & Waste Management.
 Data may not add up to the total due to rounding.

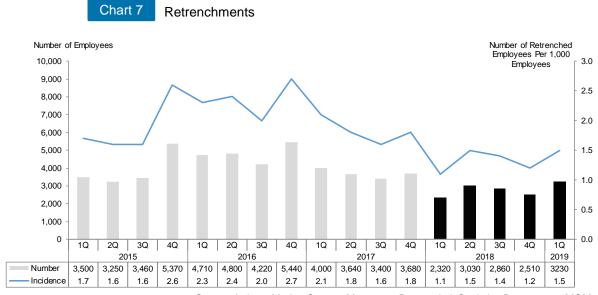

- (4) -: nil or negligible
 (5) 'excl FDW' refers to excluding foreign domestic workers.
 (6) Administrative & Support Services includes Security & Investigation Services, Cleaning & Landscaping, Employment Agencies.
 (7) Community, Social & Personal Services includes Public Administration & Education, Health & Social Services and Arts, Entertainment & Recreation.
- (8) The industries are classified based on SSIC 2015.

Retrenchment

More retrenchments than past quarter and a year ago

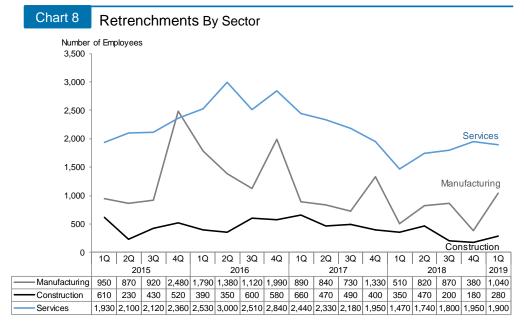

3,230 employees were retrenched in the first quarter of 2019, up from the previous quarter (2,510) and a year ago (2,320). The increase was driven by manufacturing (from 380 to 1,040), and affected mainly production & related workers from electronics. Consequently, electronics formed 18% of retrenchments in the first quarter of 2019, followed by services industries such as wholesale trade (16%) and transportation & storage (10%).

While restructuring and reorganisation remained the main reason cited by establishments for retrenchments, there was a rise in the share of retrenchments from the previous quarter due to high costs and downturn in the industry.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

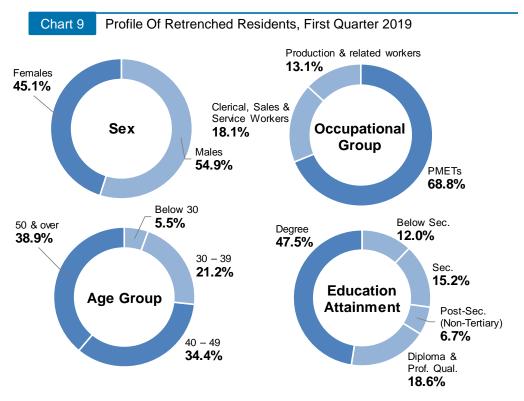

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data on the number of retrenchments are rounded to the nearest 10.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data are rounded to the nearest 10. Hence, they may not add up due to rounding.

Among retrenched residents, professionals, managers, executives & technicians (PMETs) continued to make up the majority (69%), as they form a higher share of the workforce, and were more prone to retrenchments.⁵

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM $\,$

Notes:

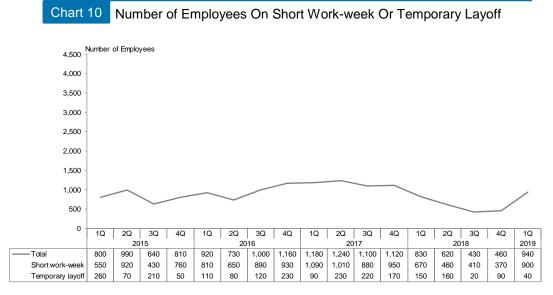

(1) Data on retrenched residents pertain to private sector establishments (each with at least 25 employees) and the public sector.

(2) Data may not add up to the total due to rounding.

⁵ 1.3 PMETs were retrenched per 1,000 resident PMET employees in the first quarter of 2019, higher than non-PMETs (clerical, sales & services workers: 1.0 per 1,000; production & related workers: 1.0 per 1,000).

Employees on short workweek rose The number of employees who were placed on short work-week rose in the first quarter of 2019 (900), following a downtrend since the third quarter of 2017. The number of employees placed on temporary layoffs declined and remained low (40).

Employees placed on short work-week or temporary layoff were mainly from manufacturing (80%), followed by construction (14%) and services (6.0%). By occupation, two-third of employees (68%) were PMETs, while the remaining were production & related workers (26%) and clerical, sales & service workers (6.4%).

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) Data are rounded to the nearest 10. Hence, they may not add up to the total.

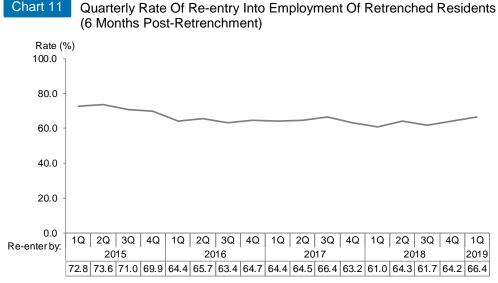

Re-entry Into Employment

Rate of re-entry into employment continued to improve

The six-month re-entry rate among retrenched residents rose for the second consecutive quarter, from 64% in the fourth quarter of 2018 to 66% in the first quarter of 2019.

The increase was observed for most age, education and occupational groups, except for residents aged below 30, clerical, sales & service workers, as well as the post-secondary (non-tertiary) educated.

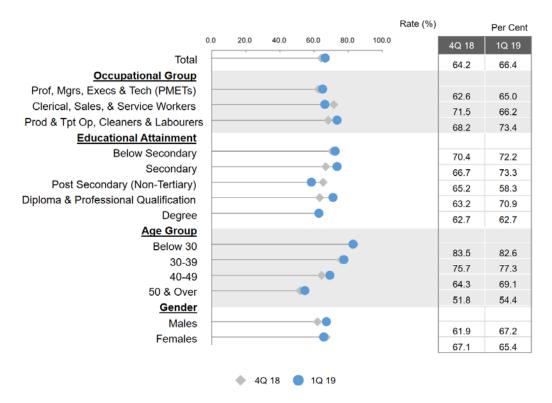

While PMETs and degree holders continued to observe below-average re-entry rates, their rates have trended up from the first quarter of 2018.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

- (1) Data refer to re-entry rates for residents retrenched 6 months ago by private sector establishments (each with at least 25 employees) and the public sector. For example, the re-entry rate for the first quarter of 2019 refers to residents retrenched in third quarter of 2018.
- (2) Data on re-entry into employment are cohort-specific. Two different cohorts of workers laid off could yield different re-entry rates depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or undergo training while looking for a job.

Chart 12 Quarterly Rate Of Re-entry Into Employment Of Retrenched Residents (6 Months Post-Retrenchment)

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM and derived based on data from Administrative Records

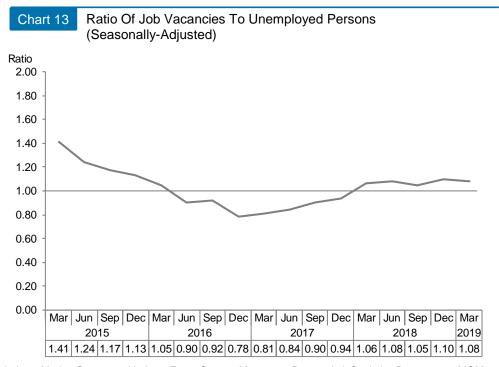

Note: Data refer to re-entry rates in the fourth quarter of 2018 / first quarter of 2019 for residents retrenched in the second/third quarter of 2018 by private sector establishments (each with at least 25 employees) and the public sector and re-entered employment, 6 months post-retrenchment.

Job Vacancy

Ratio of job vacancies to unemployed persons eased slightly After seven preceding quarters of increases, the demand for labour eased, with fewer seasonally-adjusted job vacancies in March 2019 (57,100) compared to December 2018 (62,300). There continued to be more vacancies than job seekers, although the seasonally-adjusted ratio of job vacancies to unemployed persons dipped slightly from 1.10 in December 2018 to 1.08 in March 2019.

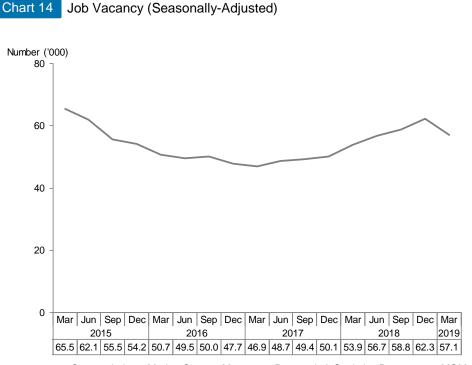

There were still more vacancies than the same period a year ago, with PMET openings contributing the bulk of the increase (+2,100), mainly from financial services (+800), professional services (+600, due to a pickup in hiring for legal, accounting & management services) and community, social & personal services (+500). This was followed by an increase in vacancies for clerical, sales & service workers (+700), while fewer vacancies were production & related positions (-200).

In March 2019, about three in five job vacancies were PMET positions (57%). Clerical, sales & service workers (23%) and production & related workers (20%) had near equal contribution to the remaining vacancies.

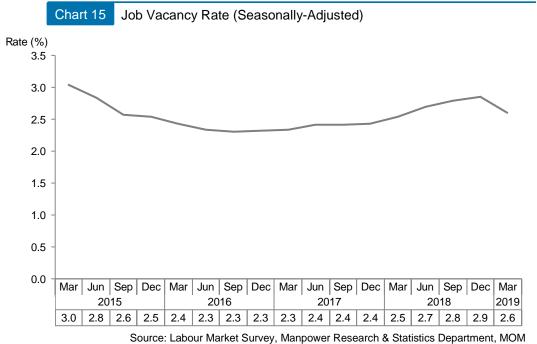

Source: Labour Market Survey and Labour Force Survey, Manpower Research & Statistics Department, MOM

Note: Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy are estimated assuming that private sector establishments with less than 25 employees have the same vacancy rate as those with 25-49 employees.

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

Labour Turnover

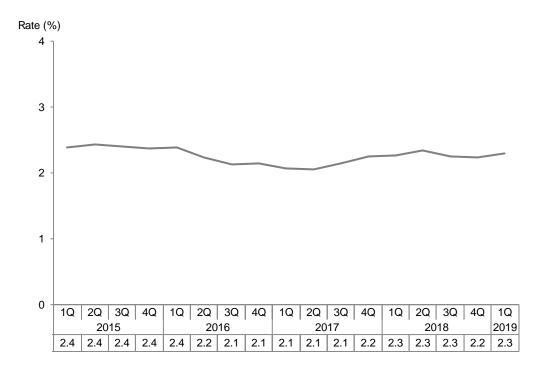

Turnover rates remained stable

The seasonally-adjusted recruitment (2.3%) and resignation rates (1.8%) remained stable in the first quarter of 2019.

Overall labour turnover was also unchanged over the year, though trends differed by industry. Increases in labour turnover were the highest in real estate services and construction, while the decline was more pronounced in retail trade which observed slower retail sales and is expecting less favourable business conditions in the next six months.⁶

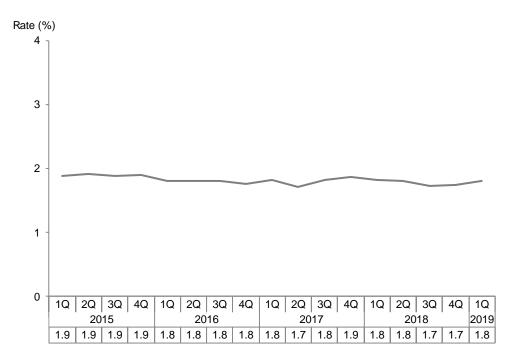

Chart 16 Average Monthly Recruitment And Resignation Rates (Seasonally-Adjusted)

Recruitment Rate

⁶ Sources: Economic Survey of Singapore, MTI and Business Expectations (Services Sector), Department of Statistics, MTI.

Resignation Rate

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) The average monthly resignation/recruitment rate is defined as the average number of person who resigned / who were recruited in a month divided by the average number of employees in the establishment.

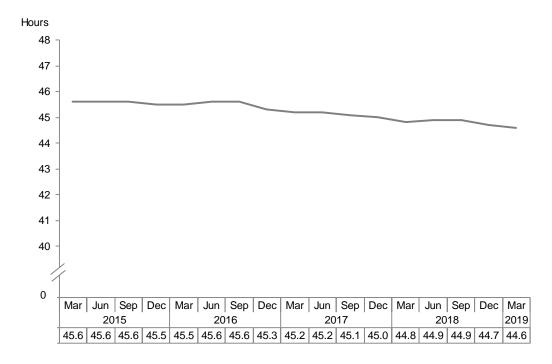

Hours Worked

Paid hours worked per employee continued to fall The average total weekly paid hours worked⁷ per employee was slightly lower in March 2019 (44.6 hours) than in December 2018 (44.7), due to a decline in paid overtime hours (from 2.7 to 2.6).

Similar declines were seen over the year, and were more pronounced in construction and manufacturing (due to fabricated metal products, machinery & equipment; paper/rubber/plastic products & printing; and food, beverages & tobacco). Conversely, employees in information & communications have generally observed year-on-year increases in hours worked since March 2017.

Chart 17 Average Weekly Paid Hours Worked Per Employee

Note: Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

TECHNICAL NOTE LABOUR TURNOVER

WHAT IS LABOUR TURNOVER?

Labour turnover refers to the movement of persons into and out of employment. In Singapore, labour turnover is measured by:

- (1) Average monthly recruitment rate during the quarter. This is defined as the average number of persons recruited in a month during the quarter, divided by the average number of employees in the establishment. The annual figures are simple averages of the quarterly figures.
- **(2) Average monthly resignation rate** during a quarter. This is defined as the average number of persons who resigned in a month during the quarter, divided by the average number of employees in the establishment. The annual figures are simple averages of the quarterly figures.

Recruitment and resignation rates provide an indication of the state of labour market and economy. In times of economic growth when job openings are plentiful, recruitment and resignation rates tend to be high, reflecting movement of workers between jobs. In periods of economic downturn however, turnover is lower as both employers and employees become cautious in hiring and leaving.

Employers use resignation rates to gauge the level of stability of their organisation and the morale of their employees. A low resignation rate in a company relative to the industry average is usually considered to be an indicator of good labour-management relations. On the other hand, high resignation rates can signal low staff morale, and are costly to the firm because they need to devote time and resources to recruit and train new employees.

HOW ARE LABOUR TURNOVER STATISTICS COMPILED?

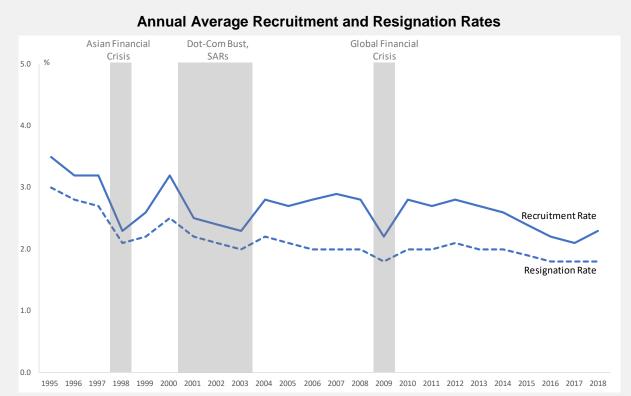

Average recruitment and resignation rates are compiled quarterly from a representative sample of private and public sector establishments.

TRENDS IN LABOUR TURNOVER

Singapore's recruitment and resignation rates have declined slightly over time. The lower recruitment rate reflects the economy's transformation efforts to be more manpower lean, and the lower resignation rate reflects the shift towards PMET employment, whose turnover tended to be more stable.

However, short term fluctuations can happen in tandem with business cycles. During downturn periods in 1998, 2001 and 2009, both recruitment and resignation rates declined. Employers reduce hiring, and employees are less likely to leave their jobs, given fewer jobs opportunities in the market. The magnitude of decline in recruitment and resignation rates corresponds closely with the severity of the downturn.

On the whole, movements in recruitment rate are greater compared to resignation rate, suggesting that employers are able to respond more quickly to changes in economic and business conditions. On the other hand, resignation rates tend to be more stable.

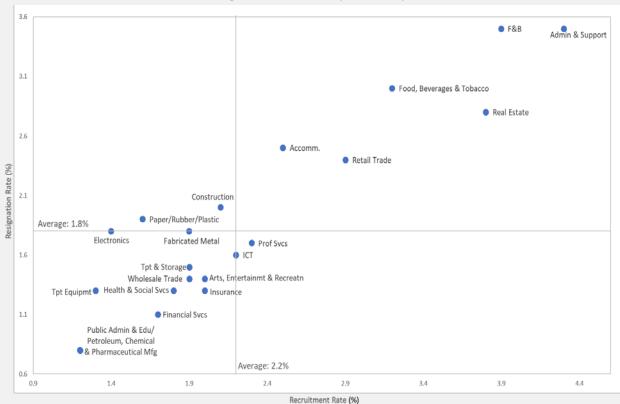

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

- (1) Data pertain to private sector establishments (each with at least 25 employees) and the public sector.
- (2) The average monthly resignation/recruitment rate is defined as the average number of person who resigned / who were recruited in a month divided by the average number of employees in the establishment.
- (3) Annual figures are computed based on the simple averages of the four non-seasonally adjusted quarterly figures in the year.

LABOUR TURNOVER BY INDUSTRY

Labour turnover also reflects the unique labour market dynamics of various industries. For example, accommodation, food services and retail trade typically have higher turnover rates because of their heavy reliance on temporary and part-time workers to cope with seasonal fluctuations in demand.

Recruitment and Resignation Rates By Industry, First Quarter 2019

Source: Labour Market Survey, Manpower Research & Statistics Department, MOM

⁽¹⁾ Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

⁽²⁾ The average monthly resignation/recruitment rate is defined as the average number of person who resigned / who were recruited in a month divided by the average number of employees in the establishment.

- 1) The quarterly rates show the rates of re-entry into employment in a quarter for residents retrenched six months ago.
- 2) The annual rate refers to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment.
- 3) Data refer to the proportion of residents retrenched by private sector establishments (each with at least 25 employees) and the public sector, who re-entered employment six months after they were retrenched.

¹⁾ Data pertain to private sector establishments (each with at least 25 employees) and the public sector.

²⁾ Annual figures are the simple averages of the figures obtained at quarterly intervals.

Explanatory Notes

Unemployment

Source

Labour Force Survey

Coverage

The survey covers private households in Singapore. It excludes workers living in construction worksites, dormitories and workers' quarters at the workplace and persons commuting from abroad to work in Singapore. Estimates of the total labour force are derived by combining data on residents (also known as locals) obtained from the survey with foreign employment data compiled from administrative records.¹

Concepts and Definitions

Unemployed persons refer to persons aged 15 years and over who did not work but were actively looking and available for work during the reference period. They include persons who were not working but were taking steps to start their own business or taking up a new job after the reference period.

Unemployment rate is defined as the percentage of unemployed persons to the labour force (i.e. employed and unemployed persons) aged 15 years and over.

Long-term unemployed persons refer to persons aged 15 years and over who have been unemployed for 25 weeks or more.

Long-term unemployment rate is defined as the percentage of long-term unemployed persons to the labour force.

Uses and Limitations

The unemployment rate is probably the best-known measure of the labour market. It measures unutilised labour supply and is useful in the study of the economic cycle as it is closely related to economic fluctuations.

Unemployment can have frictional, cyclical and structural elements. As it takes time for job seekers and employers to find a match, there is always a certain level of frictional unemployment due to people changing jobs and from new entrants looking for work for the first time. Unemployment can also be structural e.g. arising from a mismatch between the job seekers and the job openings available. With structural unemployment, even if job vacancies and job seekers coexist in the labour market, they may not be matched over a long period of time. Finally, unemployment can be cyclical. This occurs when there is a general decline in demand for manpower as aggregate demand for goods and services fall in the event of a cyclical downturn. Unlike structural and frictional unemployment where the problem is in matching job openings with job seekers, cyclical unemployment occurs when there are not enough jobs to go around.

Unemployment can vary due to changes in demand or supply of manpower. It can decline if more people succeed in securing employment or when the unemployed persons stop looking for a job and leave the labour force either temporarily (e.g. to take up training) or permanently (e.g. to retire). Conversely, unemployment may rise due to

¹ Population figures for each quarter will be finalised in the next quarter. Unemployment data are therefore subject to the latest available population estimates.

increase in labour supply from new entrants or re-entrants to the labour market. It will also rise if more people quit their jobs to look for alternative employment or if there is an increase in layoffs.

Unemployment rates by specific groups, defined e.g. by age and educational attainment are useful in identifying groups of workers most vulnerable to unemployment.

Employment

Source

Primarily from administrative records. The self-employed component is estimated from the Labour Force Survey.

Coverage

Employment data comprise all persons in employment i.e. employees and the self-employed. However, it excludes men who are serving their 2-year full-time national service liability in the Singapore Armed Forces, Police and Civil Defence Forces.

Data on the number of local (also known as resident) employees are compiled from the Central Provident Fund (CPF) Board's administrative records of active contributors, defined as local employees who have at least one CPF contribution paid for him/her. A local employee is a Singapore citizen or Permanent Resident who is employed by an employer under a contract of service or other agreement entered into in Singapore. Every local employee and his/her employer are required to make monthly contributions to the CPF. The CPF is a compulsory savings scheme that provides workers financial security in old age and helps meet the needs of healthcare, home-ownership, family protection and asset enhancement.

Data on foreigners working in Singapore are compiled from administrative records of foreigners on valid work passes issued by the Ministry of Manpower. Foreigners can work in Singapore only if they have valid work passes issued by the Ministry of Manpower.

The number of self-employed residents is estimated from the Labour Force Survey. The self-employed comprises persons aged 15 years and over who are own account workers, employers or contributing family workers.

Concepts and Definitions

Employment change refers to the change in the number of persons who are in employment, derived by taking the difference in the employment level (i.e. number of employed persons) at the end of the reference period compared with the end of the preceding period. A positive change refers to the additional number of persons who are in employment, while a negative change refers to the decline in number of persons in employment.

Uses and Limitations

Analysis of employment change over time helps in understanding the impact of cyclical and structural changes in the economy on the demand for workers. In particular, the breakdown of employment by industry helps identify sectors where employment is growing or falling.

Conceptually, the change in employment over the reference period is the difference between people entering and exiting employment during the period. Users should not mistake an increase in employment as gross job creation i.e. the increase in employment in expanding establishments only.

Retrenchment

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Retrenchment refers to

- i) termination of permanent employees due to redundancy; and
- ii) early termination of term contract employees due to redundancy. In the public sector, it includes those who left service under the Special Resignation Scheme².

Uses and Limitations

Data on retrenchment are useful in the analysis of re-structuring or ailing industries.

The number of retrenched persons (flow) should not be confused with persons unemployed (stock). Not all retrenched persons will be unemployed as some will re-enter into employment or decide to leave the labour force. If the persons have not found a new job and are actively looking and available for work, they join the pool of unemployed.

Re-entry into Employment

Source

Labour Market Survey and derived based on data from administrative records

Coverage

Information on retrenched resident workers is obtained from the Labour Market Survey. Before 2007, data pertain to residents retrenched from private sector establishments with at least 25 employees. From 2007 onwards, data also include residents retrenched from the public sector. With effect from the first quarter of 2010, the coverage is further expanded to include employees on term contracts which were terminated prematurely due to redundancy. The status of re-entry into employment of these workers is tracked using administrative records. Hence, it does not capture retrenched workers who went into self or informal employment or undergo training while looking for a job.

² The Special Resignation Scheme (introduced in April 1988) allows redundant non-deployable Civil Service or Statutory Board employees to leave their organisations with compensation.

Concepts and Definitions

Re-entry rate is defined as the proportion of retrenched residents who re-entered employment. The re-entry rate (6 months post-retrenchment) refers to the re-entry rate in a quarter for the residents retrenched six months ago. For example, the re-entry rate for the first quarter 2018 shows the proportion of residents retrenched in the third quarter of 2017 who had re-entered employment six months after they were retrenched. The annual rates refer to retrenched residents who re-enter employment by the year, given 6 months post-retrenchment. For example, the 2018 re-entry rate pertains to residents retrenched from 3Q 2017 to 2Q 2018, who re-entered employment by 2018 (given 6 months post-retrenchment).

Uses and Limitations

This indicator measures the prospects of re-entry into employment of retrenched workers. It allows us to identify vulnerable workers who find it difficult to secure re-entry into employment after layoff.

A low re-entry rate could also be the result of workers taking a break from the labour force rather than a weak job market. An analysis of the change in re-entry rate over time should therefore be made in the context of other indicators on the labour market. Also, the indicator could be cohort-specific. Even if the state of the labour market is unchanged, two different cohorts of workers could yield different re-entry rates, depending on the profile of the workers involved. Also, the data based on administrative records do not capture workers who went into self or informal employment or undergo training while looking for a job.

Job Vacancy

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Job vacancy refers to the number of unfilled posts which an establishment is actively recruiting employees from outside the establishment. They exclude:

- a) Positions for which the employees have been appointed, but have not yet commenced duty;
- b) Positions open only to internal transfers or promotions.

Recruitment action to fill a post includes advertising in newspapers, posting notices on the internet (e.g. on online job banks), making word-of-mouth announcements, soliciting employees through employment agencies or job fairs, contacting or interviewing job applicants.

Job vacancy rate for a quarter is defined as the number of job vacancies divided by the demand for manpower at the end of the quarter. The demand for manpower is defined as the sum of the number of employees and job vacancies at the end of the quarter. The annual figures are the simple averages of the quarterly figures.

Job vacancy to unemployed ratio is calculated by taking the ratio of the estimates of the total number of job vacancies for the whole economy to the total number of unemployed persons. The job vacancies for the whole economy is estimated based on the assumption that private sector establishments with less than 25 employees have the same vacancy rate as private establishments with 25-49 employees. Estimates on the total number of unemployed persons are obtained from the Labour Force Survey.

Uses and Limitations

Job vacancy statistics measure unmet demand for manpower and are useful for assessing changes in the manpower demand over time. They enable users to identify industries and occupations where employers are seeking workers. This can have operational use e.g. in improving vocational guidance and helping job seekers and employers make more informed choices.

Data on job vacancies can assist in pinpointing emerging labour shortages. To identify labour shortages, trends in vacancy data would have to be evaluated together with other labour market indicators as well as background information on the occupations and factors affecting demand and supply of workers. This is because persistent job vacancies may indicate either real shortages or factors such as low wages, poor working conditions and unrealistic hiring specifications.

Labour Turnover

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Average monthly recruitment rate during a quarter is defined as the average number of persons recruited in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Average monthly resignation rate during a quarter is defined as the average number of persons who resigned in a month during the quarter divided by the average number of employees in the establishment. The annual figures are the simple averages of the quarterly figures.

Uses and Limitations

In good times when job openings are plentiful, recruitment and resignation rates tend to be high reflecting movement of workers between jobs. In periods of economic downturn, high layoffs are usually coupled with low resignation and recruitment rates.

The resignation rates by industry are valuable to employers for comparing their staff turnover against the industry norm. Low resignation rate in a company relative to the industry average is usually considered to be an indicator of good labour-management relations. Labour turnover also reflects the unique labour market dynamics of the

various industries. For example, accommodation and food services typically have higher turnover rates because of their heavy reliance on temporary and part-time workers to cope with seasonal fluctuations in demand.

Paid Hours Worked

Source

Labour Market Survey

Coverage

Before 2006, the survey covers private establishments with at least 25 employees. From 2006 onwards, the survey also includes the public sector comprising government ministries, organs of state and statutory boards.

Concepts and Definitions

Total paid hours worked refers to the total number of paid hours worked during a week by an employee. It is the sum of standard hours and paid overtime hours worked.

Standard hours worked refers to the number of hours, excluding meal breaks worked by an employee during a normal working week.

Paid overtime hours worked refers to the number of hours worked by an employee during a week in excess of the standard hours for which the employees were paid. It excludes overtime hours worked for which "time-off" was granted instead of wage payment.

Uses and Limitations

Data on paid total and overtime hours worked are used as a gauge of the level of economic activities and working conditions of the various industries. The data can also be used for social studies on family and community life.

Management staff and executives are normally not paid additional hourly wages for working overtime. For this group of staff, users can refer to statistics on usual hours worked from the mid-year Comprehensive Labour Force Survey.

Reliability of Data

In a sample survey, inferences about the target population are drawn from the data collected from the sample. Errors due to extension of the conclusions based on one sample to the entire population are known as sampling errors. The sampling error of an estimate is the extent of variation between the estimated value obtained from a sample and the true value from the population. Factors influencing the sampling error include the sample size, the sample design, method of estimation, the variability of the population and the characteristics studied.

A common measure of the sampling error of an estimate is its standard error, which is a measure of the variation among the estimates derived from all possible samples. An alternative measure is the relative standard error of an estimate which indicates the standard error relative to the magnitude of the estimate. A sample estimate and an estimate of its standard error can be used to construct an interval that will, at specified levels of confidence, include the true value. By statistical convention, the confidence level has been set at 95 per cent.

Estimates of the sampling variability of selected indicators are as follows:

	Reference	eference Estimate		Relative Standard	95% Confidence Interval		
	Period	Estimate	Error	Error (%)	Lower	Upper	
UNEMPLOYMENT							
Number of Unemployed Residents	Mar 19	65,400	2,300	3.5%	60,900	69,800	
Resident Unemployment Rate	Mar 19	2.8%	0.10%-pt	3.5%	2.6%	3.0%	
JOB VACANCY							
Job Vacancy Number	Mar 19	54,700	800	1.5%	53,100	56,400	
Job Vacancy Rate	Mar 19	2.5%	0.04%-pt	1.5%	2.5%	2.6%	
LABOUR TURNOVER							
Average Monthly Recruitment Rate	1Q 19	2.2%	0.02%-pt	1.1%	2.2%	2.3%	
Average Monthly Resignation Rate	1Q 19	1.8%	0.02%-pt	1.2%	1.8%	1.9%	
HOURS WORKED							
Average Weekly Paid Overtime Hours Worked Per Employee	Mar 19	2.6	0.03	1.1%	2.5	2.6	

Note: Data are non-seasonally adjusted.
